Nutrient Pollution Reduction Goals for the Chesapeake Bay

WHEREAS, I, Parris N. Glendening, Governor of the State of Maryland, along with the Governors of Pennsylvania and Virginia, the Mayor of the District of Columbia, the Administrator of the U.S. Environmental Protection Agency and the Chair of the Chesapeake Bay Commission, signed the Chesapeake Bay Agreement on June 2000;

WHEREAS, The Chesapeake Bay is North America's largest and most biologically diverse estuary, home to more than 3,600 species of plants, fish and animals;

WHEREAS, For more than 300 years, the Bay and its tributaries have sustained the region's economy and defined its traditions and culture and are resources of extraordinary productivity, worthy of the highest levels of protection and restoration;

WHEREAS, Improving water quality is the most critical element in the overall protection and restoration of the Chesapeake Bay and its tributaries;

WHEREAS, By 2010, the Bay agreement signatories have committed to correct the nutrient and sediment related problems in the Chesapeake Bay and its tidal tributaries sufficiently to remove them from the list of impaired waters under the Clean Water Act;

WHEREAS, Despite significant progress by Maryland's Biological Nutrient Removal

(BNR) Program, through the cooperative efforts of State and local governments, wastewater treatment plant discharges are still a significant source of the nutrients to the Bay from Maryland;

WHEREAS, As population growth and development continue, wastewater treatment plants and stormwater runoff from developed lands will continue to grow in importance as sources of nutrient pollution to the Chesapeake Bay and its tidal tributaries;

WHEREAS, The future of the Chesapeake Bay depends on reducing nutrient pollution significantly from all existing sources and applying the principles of Smart Growth to ensure that future growth occurs in areas that are served by infrastructure that provides the highest levels of nutrient removal that can be achieved cost-effectively;

WHEREAS, The Nation is celebrating the 30th Anniversary of the Clean Water Act and we recognize that tremendous gains in water quality have been achieved throughout the State of Maryland and that there remain many goals that we must still accomplish; and

WHEREAS, Maryland intends to lead and challenge the Bay Program signatories in their efforts to reduce nutrient inputs and restore the water quality of the Chesapeake Bay and its tributaries.

NOW, THEREFORE, I, PARRIS N. GLENDENING, GOVERNOR OF THE STATE OF MARYLAND, BY VIRTUE OF THE AUTHORITY VESTED IN ME BY THE CONSTITUTION AND LAWS OF MARYLAND, HEREBY PROCLAIM THE FOLLOWING EXECUTIVE ORDER, EFFECTIVE IMMEDIATELY:

A. Goals.

- (1) The Maryland Department of the Environment (MDE) shall develop and implement an enhanced nutrient removal (ENR) policy for wastewater treatment plants. The ENR policy shall be a component of the overall statewide Chesapeake Bay Tributary Strategy.
 - (a) The ENR policy shall establish a strategy to reduce nutrient discharges from wastewater treatment plants to meet the goal of achieving 3 mg/l for nitrogen and 0.3 mg/l for phosphorus in discharges wherever feasible and within time frames envisioned in the 2000 Chesapeake Bay Agreement.
 - (b) Implementation of the ENR Policy will reduce discharges of nitrogen by an additional 7.5 million pounds per year and phosphorus by an additional 220 thousand pounds per year from wastewater treatment plants in Maryland.
- (2) The State of Maryland shall lead by example by implementing innovative, state-of-the-art wastewater treatment systems capable of implementing the ENR policy at State-owned wastewater treatment plants where it is feasible.

B. Strategy.

- (1) MDE shall prepare a draft strategy implementing the ENR policy and distribute it for public review by local governments, wastewater utilities, the Tributary Teams and other stakeholders by December 31, 2002.
 - (a) The strategy shall document the levels of nitrogen and phosphorus reduction that are achievable with innovative, state-of-the-art technology and the estimated costs of achieving those levels at major wastewater treatment plants in Maryland and provide options for plants to meet the goals of this Executive Order.
 - (b) In the event of technical feasibility limitations at any one individual plant, the strategy may consider allocating discharge reduction responsibility within a Tributary Strategy basin in a manner that maximizes cost effectiveness without compromising environmental benefits.
 - (c) By the end of 2003, MDE shall publish the final ENR strategy which shall include: the technical and cost and feasibility elements of the 2002 draft strategy, and, recommendations for State grant and loan funds to provide incentives for all facilities to develop treatment plant designs capable of achieving the enhanced wastewater treatment goals.
- (2) By December 31, 2002, the Department of Natural Resources (DNR), in cooperation with the other Chesapeake Bay Cabinet agencies and the Tributary Teams, shall prepare a draft report documenting the nitrogen and phosphorus discharge reduction goals that must be achieved by all sources in Maryland in order to meet the restoration goals of the Chesapeake Bay 2000 Agreement.
 - (a) The draft report shall describe a process and establish a schedule for completing Maryland's comprehensive Chesapeake Bay Tributary Nutrient Reduction Strategy.
 - (b) By the end of 2003, DNR, in cooperation with the other Chesapeake Bay Cabinet agencies and the Tributary Teams, shall publish the final report documenting the nitrogen phosphorus goals.
