SECTION ONE
REPORT BASIS AND SUMMARY
INFORMATION

ANNUAL ENFORCEMENT AND COMPLIANCE REPORT FY19

Statutory Authority and Scope

Environment Article §1-301(d), *Annotated Code of Maryland*, requires the Maryland Department of the Environment (MDE) to report annual performance results for specific regulatory programs, and the penalty dollars collected and deposited into several funds. This report is intended to fulfill that statutory requirement. In addition to the required information, this report also includes MDE's other enforcement programs, additional information about each program, and additional data about the activities and facilities that are subject to regulation under the article.

Organization of the Report

Section One includes an overall, department-wide summary of the FY19 results. A table on pages eight through 10 compares the historical annual department-wide performance measures from FY98 – 19. Two graphs on page 11 also illustrate trends for enforcement actions and penalties obtained for these years.

Section Two presents program-specific information concerning enforcement and compliance activities for the reported programs. Related materials appear as appendices in Section Three.

Inclusion of any facility on the report cover is not an indication of its compliance status nor does it indicate that the facility is referenced in the report.

EXECUTIVE SUMMARY

The Maryland Department of the Environment's (MDE's) 23rd Enforcement and Compliance Report for FY19 (July 2018 - June 2019) reports data from MDE's enforcement and compliance programs and from the Environmental Crimes Unit of the Office of the Attorney General. This document has been prepared in accordance with the requirements of §1-301(d) of the Environment Article, *Annotated Code of Maryland*.

During FY19, MDE provided regulatory oversight for 153,908 regulated entities, with 68,387 permits in effect in 32 different enforcement areas. The number of permits in effect increased by 2%. The number of other regulated facilities decreased by 4%.

MDE inspected 55,329 sites, which is a 19% decrease from FY18, and performed 171,585 inspections, audits, and spot checks, a 6% decrease from FY18. These numbers fluctuate with priorities and levels of compliance, but the FY19 total is 12% above the average of the seven previous years, which is just under 153,000. At the same time, there was an increase of 15% in the number of enforcement actions this year, driven by a significant increase in lead-paint-related enforcement actions.

This year, penalties collected from environmental violators totaled \$2,983,527. This is a 2% decrease from last year's non-Volkswagen total of \$3,051,614. Similar to events explained in the FY18 report, MDE also received about \$2.5 million in settlements from automakers related to illegal emissions-related activities. The total penalty amount appearing on pages 6 and 10 includes those additional funds.

Large changes in penalties collected often reflect the presence or absence of large settlements during the year. Collection of penalties sometimes takes place in a fiscal year after the violation is resolved. Large settlements can take longer to negotiate and collect than smaller amounts.

The enforcement workforce remains relatively constant. There was a slight increase of 2% from the FY18 report.

MDE has continued to prioritize compliance activities based on risks to public health and the environment. Overall, the outcomes from MDE's compliance and enforcement efforts have continued to result in cleaner water, cleaner air, and reduced exposure to hazardous materials for Maryland residents.

MDE PERFORMANCE MEASURES EXECUTIVE SUMMARY

	<u>2018 Totals</u>	<u>2019 Totals</u>
<u>PERMITTED SITES/FACILITIES</u>		
Number of Permits/Licenses Issued	8,643	8,615
Number of Permits/Licenses in Effect at Fiscal Year End	67,278	68,387
<u>OTHER REGULATED SITES/FACILITIES</u>		
Total Sites	160,244	153,908
<u>INSPECTIONS</u>		
Number of Sites Inspected	68,264	55,329
Number of Sites Audited But Not Inspected	5,392	6,291
Number of Inspections, Audits, Spot Checks	181,852	171,585
<u>ENFORCEMENT ACTIONS</u>		
Number of Compliance Assistance Rendered	14,829	16,450
Number of Enforcement Actions Taken	8,590	9,914
<u>PENALTIES</u>		
Amount of Administrative or Civil Penalties Obtained*	\$32,051,614	\$5,573,586
Supplemental Environmental Projects	5 (\$6,101,000)	3 (\$3,552,500)

* This reflects the amount collected in the fiscal year, not the penalties assessed. Collection of penalties sometimes takes place in a fiscal year after the violation is resolved. Large settlements can take longer to negotiate and collect than smaller amounts.

ENFORCEMENT WORKFORCE

	Compensation*		Workforce		FTE Vacancies***	
	FY18	FY19	Inspectors**		FY18	FY19
Air/Radiation	\$3,443,745	\$3,431,811	40.0	39.0	1.8	3.3
Land	\$5,392,381	\$5,784,309	77.0	78.0	14.0	11.0
Water	\$3,995,748	\$4,406,903	47.7	50.4	1.0	4.0
Total	\$12,831,874	\$13,623,023	164.7	167.4	16.8	18.3

* "Compensation" includes wages plus fringe benefits. The numbers do not include any operating expenses such as vehicles, travel, gasoline, supplies, or other related employment expenses.

** "Inspectors" represent the number of enforcement field inspectors budgeted for the fiscal year. These numbers do not include any administrative, management, or clerical staff associated with enforcement and compliance programs. This table represents total budgeted positions, not the actual number of inspectors currently on staff.

*** "FTE (full-time equivalent) vacancies" represent the number of full-time-equivalent positions that were vacant during the fiscal year.

SECTION 1-301(d) PENALTY SUMMARY

Please note that this table reflects penalties collected, not penalties assessed.

TOTAL AMOUNT OF MONEY DEPOSITED AS A RESULT OF ENFORCEMENT ACTIONS AS REQUIRED BY SECTION 1-301(d) ¹	FY18	FY19
Clean Air Fund (includes Air Quality and Asbestos)	\$29,096,000	\$2,783,569 ²
Clean Water Fund (includes Water and Land administrations)	\$1,160,408	\$1,623,013
Hazardous Substance Control Fund	\$77,250	\$80,750
Oil Disaster Containment Clean Up and Contingency Fund	\$162,687	\$71,367
Recovered from Responsible Parties (under §7-221)³	\$180,796	\$247,140

¹ Includes only those funds required to be reported by the Environment Article, Section 1-301(d). Other penalties are reported by individual programs that total a higher amount since they are deposited into funds not required to be reported by 1-301(d). The department's total is \$5,573,586. Note that the Sewage Sludge Utilization Fund is now included in the Clean Water Fund.

² The change from FY18 to FY19 reflects the difference between last year's \$27 million from Volkswagen and the \$2 million from other automakers this year.

³ The number reported is strictly the total amount of money, as a result of enforcement, recovered by the Department from responsible parties in accordance with §7-221 of the Environment Article as called for in the statute.

MDE PERFORMANCE MEASURES ANNUAL SUMMARY

FY98 - 04

MDE Performance Measure	1998	1999	2000	2001	2002	2003	2004
PERMITTED SITES/FACILITIES							
Number of Permits/Licenses Issued	8,972	8,350	9,710	9,573	9,671	11,988	11,264
Number of Permits/Licenses in Effect at Fiscal Year End	54,668	56,024	57,253	62,679	62,882	69,831	75,729
OTHER REGULATED SITES/FACILITIES							
Other Sites	89,863	95,892	100,244	105,085	191,177	197,529	204,873
INSPECTIONS *							
Number of Sites Inspected	31,026	30,352	28,626	39,050	37,850	33,048	43,434
Number of Inspections, Audits, Spot Checks	81,372	83,899	90,488	103,782	108,043	98,550	106,845
ENFORCEMENT ACTIONS							
Number of Compliance Assistance Actions Rendered	15,837	14,709	15,831	15,032	16,523	14,120	18,646
Number of Enforcement Actions Taken	1,134	1,391	977	1,542	1,541	2,311	1,856
PENALTIES							
Amount of Penalties Obtained (\$)**	1,145,731	1,206,629	2,093,526	1,334,499	1,523,890	2,321,563	1,781,526

* Inspections:

Number of Sites Inspected: The number of individual sites physically visited and inspected for compliance.

Number of Inspections, Audits, Spot Checks: The total numbers of sites evaluated for compliance, including on-site inspections, record reviews, audits, and spot-check activities.

Each individual site can be inspected by several programs or by one program more than once, so the former is always less than the latter.

** Amount of Penalties Obtained: The total dollar amount of penalty revenue collected during the fiscal year. Note that penalties can be collected in the fiscal year after the violation for which they are assessed. This table reflects the amount of revenue obtained ("collected") in the fiscal year as a result of all enforcement actions regardless of the fund into which they are deposited.

MDE PERFORMANCE MEASURES ANNUAL SUMMARY

FY05 - 11

MDE Performance Measure	2005	2006	2007	2008	2009	2010	2011
PERMITTED SITES/FACILITIES							
Number of Permits/Licenses Issued	10,799	10,737	10,455	11,463	10,043	8,982	9,089
Number of Permits/Licenses in Effect at Fiscal Year End	73,155	77,721	77,041	100,206	92,960	93,323	92,195
OTHER REGULATED SITES/FACILITIES							
Other Sites	222,673	239,612	253,715	257,744	117,421	158,112	158,058
INSPECTIONS *							
Number of Sites Inspected	43,722	55,294	47,723	44,161	44,587	45,332	52,561
Number of Inspections, Audits, Spot Checks	103,586	115,977	107,496	122,389	122,079	124,045	129,213
ENFORCEMENT ACTIONS							
Number of Compliance Assistance Actions Rendered	10,953	11,067	10,158	11,443	14,412	21,352	21,323
Number of Enforcement Actions Taken	1,395	1,946	2,004**	2,704**	2,901	3,099	2,564
PENALTIES							
Amount of Penalties Obtained (\$)***	1,631,054	2,803,685	2,248,131	3,970,275	6,516,601	5,099,340	3,486,141

* Inspections:

Number of Sites Inspected: The number of individual sites physically visited and inspected for compliance.

Number of Inspections, Audits, Spot Checks: The total numbers of sites evaluated for compliance, including on-site inspections, record reviews, audits, and spot-check activities.

Each individual site can be inspected by several programs or by one program more than once, so the former is always less than the latter.

** These two numbers were corrected; they were previously reported as 2,011 and 2,699, respectively.

*** Amount of Penalties Obtained: The total dollar amount of penalty revenue collected during the fiscal year. Note that penalties can be collected in the fiscal year after the violation for which they are assessed. This table reflects the amount of revenue obtained ("collected") in the fiscal year as a result of all enforcement actions regardless of the fund into which they are deposited.

MDE PERFORMANCE MEASURES ANNUAL SUMMARY

FY12 - 19

MDE Performance Measure	2012	2013	2014	2015	2016	2017	2018	2019
PERMITTED SITES/FACILITIES								
Number of Permits/Licenses Issued	8,369	8,405	8,708	10,332	8,784	8,568	8,643	8,615
Number of Permits/Licenses in Effect at Fiscal Year End	92,271	92,537	78,588	69,088	67,438	64,766	67,278	68,387

Number of Enforcement Actions Taken	2,655	2,280	2,151	7,676	14,829	8,249	8,590	9,914
PENALTIES								
Amount of Penalties Obtained (\$)**	3,622,330	5,878,392	3,620,272	3,681,138	3,731,060***	3,233,531	32,051,614	5,573,586

* Inspections:

Number of Sites Inspected: The number of individual sites physically visited and inspected for compliance.

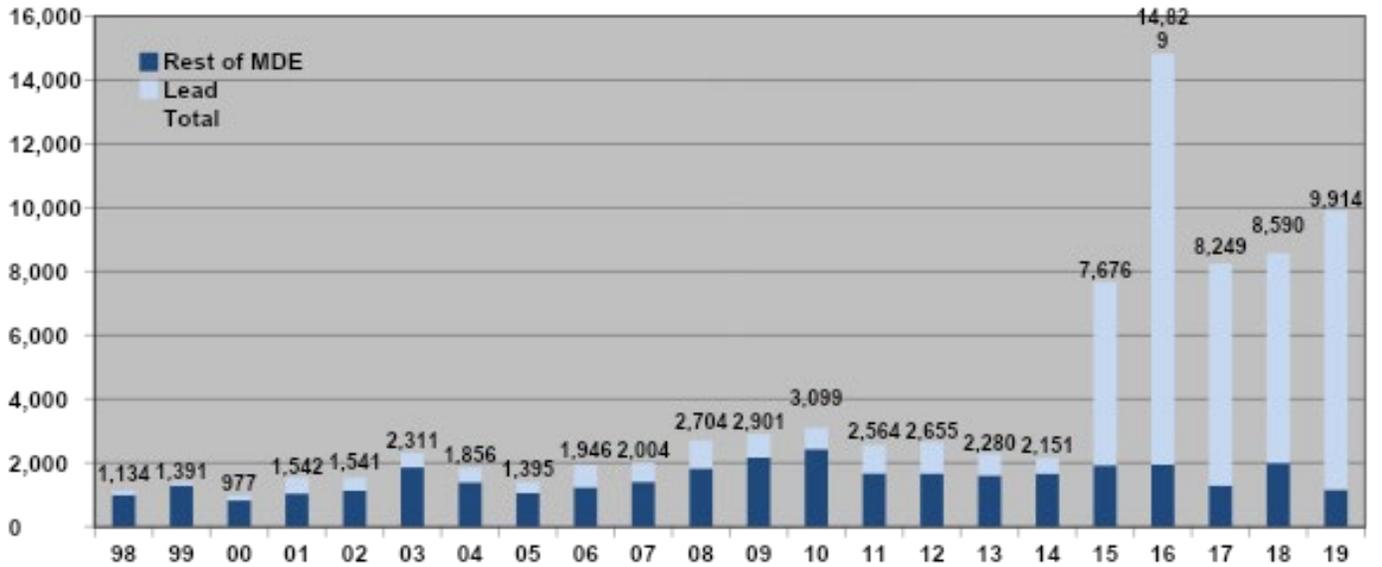

Number of Inspections, Audits, Spot Checks: The total numbers of sites evaluated for compliance, including on-site inspections, record reviews, audits, and spot-check activities.

Each individual site can be inspected by several programs or by one program more than once, so the former is always less than the latter.

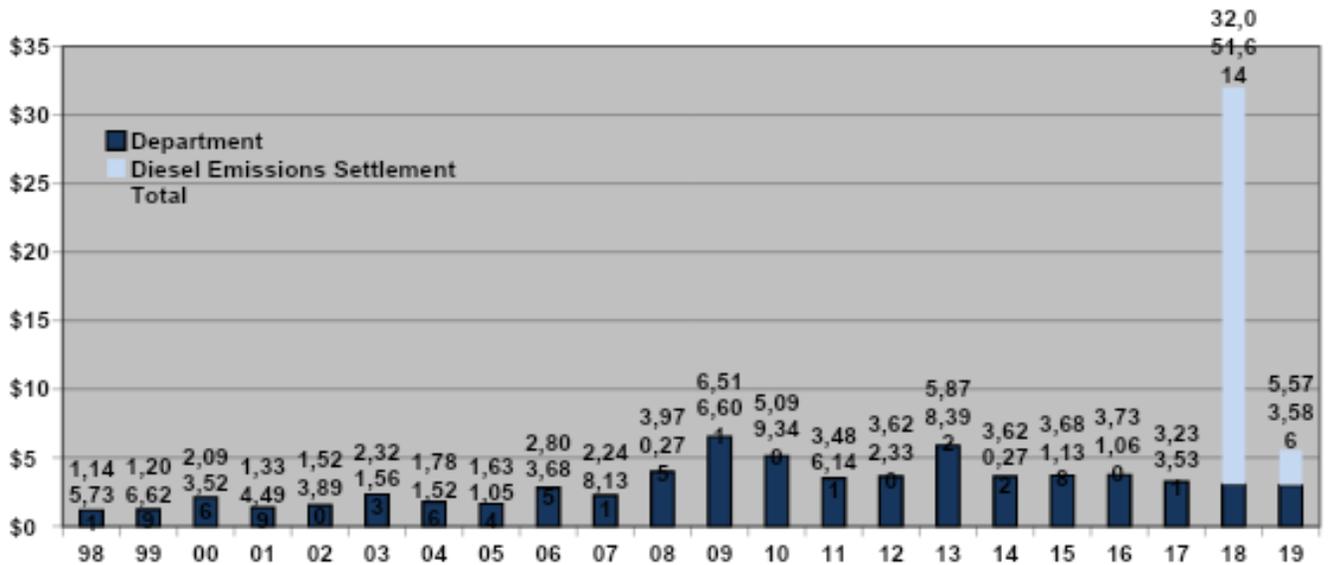

** Amount of Penalties Obtained: The total dollar amount of penalty revenue collected during the fiscal year. Note that penalties can be collected in the fiscal year after the violation for which they are assessed. This table reflects the amount of revenue obtained ("collected") in the fiscal year as a result of all enforcement actions regardless of the fund into which they are deposited.

*** FY16 updated from previous report to account for refunds that were not taken out of the total.

MDE Enforcement Actions Taken 1998-2019

MDE Penalty Amounts (\$) Collected 1998-2019

MDE'S ENFORCEMENT AND COMPLIANCE PROCESS and SERVICES TO PERMITTEES AND BUSINESSES

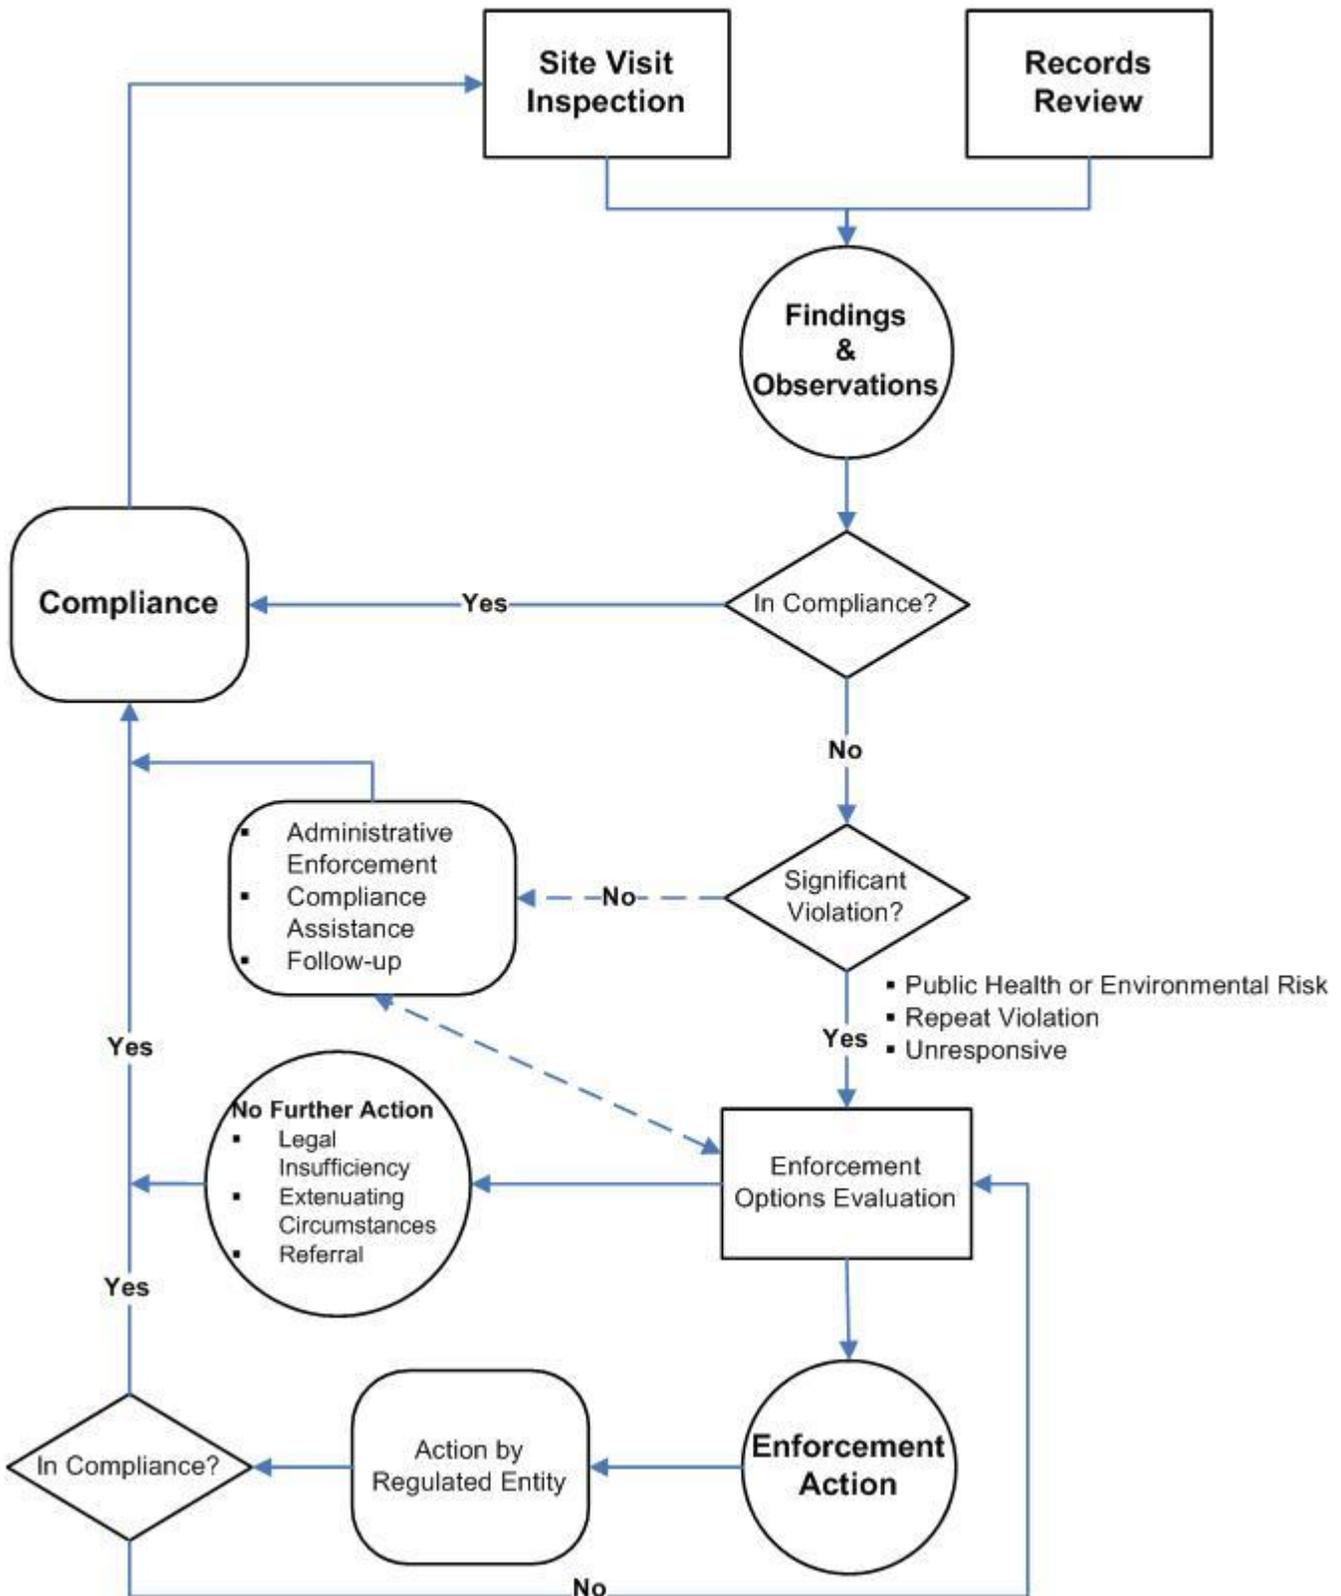

The Enforcement and Compliance Process

The enforcement and compliance processes used by MDE's air, water, and land administrations are authorized in different parts of the Environment Article, and were established separately over a period of years. As a result, similar terminology may have technically different meanings for different programs. Despite technical differences, most enforcement programs share certain common functions that allow a year-to-year comparison. Most programs have inspection, monitoring, evaluation, and enforcement components.

Many programs also implement federal rules and regulations in addition to state requirements. The same individual, company, or facility may fall under the jurisdiction of several different environmental enforcement programs at the federal, state and local level.

When minor violations such as record-keeping or reporting errors are discovered and determined not to be intentional or harmful to the environment, a program may use discretion to allow the violator to correct the problem without imposing a penalty. In such cases, compliance assistance may be the first step in a process to achieve compliance with such requirements. Compliance assistance is a process that turns to enforcement action if violations are uncorrected or environmental harm is threatened (more detail on page 15). If an inspection reveals a significant violation, or if minor violations continue to recur and become a significant problem, then enhanced actions are warranted. Such action may take the form of penalties, corrective orders, the filing of injunctions, and in some cases, criminal sanctions.

MDE ENFORCEMENT PROCESS

Supplemental Environmental Projects

MDE's approach to enforcement includes the use of Supplemental Environmental Projects (SEPs). SEPs are projects specifically undertaken to improve the environment by parties who are subject to penalty actions. Under certain limited circumstances, the value of the SEP is allowed by MDE to offset a portion of the penalty.

The U.S. Environmental Protection Agency (EPA) encourages the use of SEPs for several reasons. First, SEPs add value to enforcement settlements because SEP dollars are spent directly on environmental projects. Second, SEPs require violators to go above and beyond technical compliance with minimum legal standards and thereby reach a higher level of environmental stewardship. Finally, and probably most importantly, SEPs are intended to achieve improvements to the environment that could not be accomplished with traditional penalties. Traditional penalties serve to punish current violations and deter future violations. SEPs accomplish those traditional purposes and provide a form of community service that improves the environment where the violation occurred.

MDE entered into three SEPs during FY19 with a total value of \$3,552,500. These SEPs were all in the Land and Materials Administration. The SEPs involved the certification of rental units as either lead free or limited lead free. Details about these SEPs can be found in Appendix E.

Contacts or Consultations with Businesses

Environment Article section 1-301(d) requires this report to “*include information on the type and number of contacts or consultations with businesses concerning compliance with state environmental laws.*” This section identifies the two types of contacts MDE has with businesses to assist in bringing a site into compliance and to assure future compliance: compliance assistance and other consultations.

Compliance Assistance

Compliance assistance is used by MDE as one of the many tools to educate the regulated community before violations occur and--- in the case of non-serious violations--- to bring a site into compliance and to assure future compliance. This form of contact between businesses and MDE’s inspectors is counted in the programs’ performance measures tables under the category of “*compliance assistance rendered.*” As an element of MDE’s compliance process, an inspector renders a tangible act of compliance assistance when the inspector:

- a) Documents a specific past or current violation which the regulated entity corrects in the absence of a formal enforcement action; or
- b) Documents a specific action or actions which the regulated entity has the option of undertaking to bring a site into compliance and to assure future compliance. The action or actions are voluntarily undertaken by the regulated entity in such manner and within such time period as deemed acceptable by MDE in the absence of a formal enforcement action.

For either (a) or (b), the MDE inspector must document the manner in which the regulated entity voluntarily achieved compliance. This definition of "compliance assistance" requires the action to be measurable, and objectively verifiable by a third party. This documents MDE’s activities to keep facilities in compliance without the use of formal enforcement actions.

Consultations with Businesses

MDE provides other tools to educate businesses and other regulated entities. These include making guidance documents available, providing forms, and publishing information about new or updated requirements on MDE’s website. MDE also works with businesses before they apply for permits to explain what permits will be required for a proposed activity and the application process for the required permits. Possible compliance requirements such as sampling, reporting, and record-keeping may also be explained.

The department’s website (mde.maryland.gov) provides additional information that businesses may use to determine compliance with environmental requirements:

- The Guide to Environmental Permits and Approvals provides detailed information about each of MDE’s permit programs.

- MDE has made a number of permit applications and instructions for completion available online. MDE is also working to enable businesses to submit their permit applications via the Internet.
- MDE has created an Enforcement webpage where information can be found concerning enforcement programs and current enforcement actions:
mde.maryland.gov/Pages/enfcomp.aspx.

SECTION TWO
ADMINISTRATION DETAILS

MEASURING ENFORCEMENT AND COMPLIANCE

MDE has been measuring, in a consistent fashion, the performance of its enforcement and compliance activities since 1998. This report standardizes the accomplishments of enforcement and compliance programs using metrics for the 31 enforcement areas that are the subject of this report.

Enforcement actions are taken by MDE's three administrations:

Air: Includes air pollution and radiation programs.

Land: Includes oil control, solid and hazardous waste management, sewage sludge utilization, animal feeding operations, scrap tire recycling, lead poisoning prevention, natural wood waste recycling, coal and mineral mining, oil and gas exploration and production, and hazardous substance clean-up programs.

Water: Includes drinking water, tidal and non-tidal wetlands, wastewater discharges, water appropriation, waterway and floodplain construction, dam safety, stormwater management and sediment and erosion control programs.

Organization of Section Two

Section Two is divided by administration and by enforcement area/program. First, an overall administration executive summary describes the enforcement and compliance efforts during this fiscal year, followed by key performance measures for that administration. Next, the sections for each enforcement area/program include the purpose of the program, its underlying authority, its enforcement process, summary of the program's successes and challenges, the performance measures table, and three charts comparing data on inspection coverage; number of inspections, audits, and spot checks; and number of enforcement actions.

SAMPLE PERFORMANCE MEASURES TABLE

This key table presents an accounting of each program's activity. Definitions of each measure appear below. An example of the table with the lines numbered to correspond to the following definitions follows this list of definitions.

1. *Permitted Sites/Facilities and Other Regulated Sites/Facilities: Measures of the MDE or Program workload.*

Lines 2, 3, and 5-8: Identify the total universe of facilities over which the program has regulatory responsibility.

Line 2: Shows the number of new permits or permit renewals issued during the year.

Line 3: Shows the total number of permits that were in effect at fiscal year end.

Lines 5-8: Used by those programs that have regulatory responsibility for sites, facilities, and other entities that are not required to obtain a formal permit, but still fall under MDE's regulatory oversight.

9. *Inspections and Audits: A measure of output.*

Lines 10-12: Present numbers of sites evaluated for compliance. Inspections are defined as physical visits to the site to determine compliance, whether the visit involves walking around the site or a record review at the site. An audit is a review of records or self-monitoring reports performed off-site at MDE offices. These measures are reported separately to illustrate that many important regulatory oversight activities occur off-site.

Lines 13-15: Present numbers of inspections, audits and spot checks performed. The number of inspections is often substantially higher than the number of sites (comparing lines 12 and 15) because some sites are inspected more than one time during the year, depending on the degree of risk that the regulated entity poses to the public. Also, some individual sites are sufficiently large or diverse to warrant having different portions of the site, or different pieces of equipment, inspected separately.

16. *Compliance Profile: A measure of the results accomplished.*

Lines 17-19: A snapshot of the overall compliance status of the facilities inspected during the fiscal year.

Line 17: Identifies how many of the inspected sites were found with significant violations, providing a key element used to determine the inspection compliance rate (percentage) shown on line 18. If a site was found to have a significant violation, it was counted as being out of compliance, even if the site was brought back into compliance later in the year.

Line 18: The percentage of inspected sites with significant violations. Line 17 divided by Line 10 times 100.

Line 19: The enforcement “inspection coverage rate” measure. The “inspection coverage rate” is defined as the ratio of sites inspected divided by the total number of sites or regulated entities in that program’s universe. “Sites” may include other than a single physical location since many programs have regulatory oversight responsibility for things other than facilities.

20. Significant Violations: A measure of what was found.

Lines 21- 24: Record the total number and nature of the significant violations the program identified during the fiscal year. Significant violations are defined by individual programs on the basis of their unique statutory and regulatory threshold requirements. MDE’s general definition of a significant violation is any violation that requires MDE to take some form of remedial or enforcement action to bring the facility into compliance. MDE’s penalty policy further clarifies this definition and can be found in Appendix E.

Line 21: Indicates how many significant violations resulted in an environmental or health impact.

Line 22: Counts how many significant violations were technical/preventative in nature. The distinction here is based on evidence or proof that MDE must present to establish the violation in a contested case.

- Cases that include evidence of actual physical damage to the environment or to a human being, such as samples, photographs, or direct observations, are counted as having an environmental or health impact.
- Cases in which documentary evidence, such as falsified discharge monitoring reports, lack of permits or failure to maintain records, are counted as technical/preventative on line 22.
- The distinction between physical and technical violations is made to avoid the misperception that all violations involve pollution or immediately endanger human health.
- Either environmental/health violations or technical/preventative violations can be considered significant or non-significant depending on the circumstances of the violations.

Line 23: Accounts for the number of significant violations carried over from last year. Note that for some programs this will not match the number of ongoing from the previous year’s report. This is due updates in the database used for reporting that occur after the data is collected for this report. For these programs the number reported is what is in the database when the data for the report is collected.

Line 24: The sum of lines 21 through 23, the total number of significant violations the program attempted to resolve during the fiscal year.

25. Disposition of Significant Violations: What is the status?

Lines 26 and 27: Answer the question of how many enforcement responses were concluded for significant violations in the fiscal year and how many are going to be carried over to next year.

- Resolved means that (1) an enforcement action taken or compliance assistance rendered, and (2) the violator either has completed any required corrective action or has an executed agreement to take the corrective action and has begun bringing the site back into compliance.
- An ongoing enforcement response is one that is still in process and the site or violator has not taken adequate steps to correct the violation. Cases remain ongoing if the violator does not respond to MDE's initial violation notification; hearings have been scheduled and not yet held; or the hearing is complete and the violator has chosen to appeal the order. Ongoing enforcement responses are those not yet finished.

28. Enforcement Actions and Penalties: What are the tools MDE uses to bring about compliance?

Lines 29 – 36: MDE has a number of different enforcement tools that can be used to achieve compliance.

Line 29: Captures how often the program used compliance assistance.

- Compliance assistance is rendered when written documentation states that the correction has been made or commenced. This number does not necessarily correspond to the number of significant violations found because potential problems, which have not yet become violations, when corrected and documented, are counted as compliance assistance.
- Using compliance assistance allows MDE to bring facilities into compliance and to assure future compliance. This first step in a process may turn into an enforcement action if violations are uncorrected or environmental harm is threatened. It is often implemented in less time and may reduce the environmental consequences of the violation.

Lines 30 through 32: Cover specific types of enforcement actions required to be reported under Environment Article Section 1-301(d). These are broken down into administrative and civil/judicial.

Line 33: The number of penalty actions and other enforcement actions not specifically designated above. These actions are primarily penalty actions, but they also include various forms of remedial requirements that do not fit the descriptions of the actions named in the statute.

Line 34: How often the program referred a matter to the Environmental Crimes Unit of the Attorney General's Office for possible criminal prosecution. These referrals are not counted as resolved until there is a completed criminal case or the unit has declined to take a criminal action, returned the case to the program and the program has taken an alternative form of enforcement.

Line 36: The amount of administrative or civil penalties obtained, monies collected during the fiscal year. The penalties recorded may have been imposed in prior years, but are collected in whole or in part during the reporting year.

AIR AND RADIATION ADMINISTRATION

Air and Radiation Administration

Executive Summary

The Air and Radiation Administration (ARA) conducts enforcement and compliance activities in three programmatic areas: air quality, asbestos and radiation, and continues to successfully implement its programs: FY19 emissions of greenhouse gas emissions were down 37% since FY15, and emissions of key regulated air pollutants were down 54% over that same period.

On January 15, 2019, the Circuit Court for Baltimore City approved a settlement Maryland reached with Fiat Chrysler US and affiliated entities regarding the sale of more than 1,200 model year 2014-2016 Ram 1500 trucks and Jeep Grand Cherokee sport utility vehicles equipped with 3.0-liter V6 diesel engines that contained undisclosed software that could circumvent applicable emission standards. As part of that settlement, Fiat Chrysler agreed to pay a civil penalty in the amount of \$1,005,069. That penalty was paid in February 2019.

Also on January 15, 2019, the Circuit Court for Baltimore City approved a settlement Maryland reached with Bosch, an automotive software developer, regarding the programming of emissions control software used by its clients, including Volkswagen, Porsche, Audi and Fiat Chrysler, in unlawful defeat devices in certain light duty passenger vehicles those clients marketed in the United States. As part of that settlement, Bosch agreed to pay a civil penalty in the amount of \$1,584,990. That penalty was paid in February 2019.

The Air Quality Compliance Program received more than 400 air quality complaints in FY19. The program responds to all complaints by telephone and, based on the nature of the complaint, identifies and places priority on those that require a field inspection. Some complaint situations may need multiple follow-up inspections to address the concerns of the complainants and to ensure compliance with air quality requirements.

In the Asbestos Division, contractors intending to abate asbestos are required to notify MDE. MDE prioritizes inspections to focus on projects with the highest potential impact on public health. Demolition projects are also inspected. The number of asbestos notifications received in FY19 was 2,180.

The Radiation Machines Division (RMD) continues to implement the requirements for x-ray machine owners to register and certify their machines, and to conduct regular maintenance on them. RMD licenses private inspectors and registers machine service providers. RMD also inspects dental, veterinary, and mammography machines to ensure compliance with state regulations. In FY19, 83% of inspected radiation machines were found to be in compliance upon initial inspection.

Ambient Air Quality Control

PURPOSE

There are approximately 12,000 stationary sources of air emissions registered in Maryland. The Air Quality Compliance Program is responsible for ensuring that these sources comply with applicable air pollution control requirements. Approximately 200 of these sources emit more than 95% of all the pollutants emitted from stationary sources. These 200 high-emitting sources and an additional 400 or so priority sources receive a high level of scrutiny. The additional priority sources are selected due to concerns regarding potential emissions, toxic air pollutant emissions, potential for nuisance impact, impact on the general welfare, or the potential for significant risk to public health or the environment. This group of approximately 600 sources includes facilities such as power plants, large industrial operations, manufacturing plants, asphalt plants, and incinerators. This group varies slightly in number from year to year due to start-up of new sources, shut-down of existing sources, or sources reducing emissions or using less toxic materials to the point where they are no longer considered priority sources and thus do not demand close scrutiny. The remainder of the 12,000 sources are generally smaller in terms of their emissions or their impacts and are considered to be of lesser risk to public health or the environment. Examples of these smaller sources include dry cleaning operations, gas stations, charbroilers, small boilers, paint spray booths, and degreasing machines. For this reason, performance measures information is presented in two categories, *High-Impact Air Emission Facilities* and *Low-Impact Air Emission Facilities*.

AUTHORITY

FEDERAL: Clean Air Act, Title I, Section 110

STATE: Environment Article, Title 2; COMAR 26.11

PROCESS

In inspecting facilities, a major focus is given to those approximately 600 sources described above that are considered a potential significant risk to public health or the environment. Often, multiple inspections are performed at these sources over the course of a year. Inspections are both announced and unannounced, depending on the nature and purpose of the inspection. Attention is given to smaller, lower-risk sources through special initiatives that may focus on inspecting all sources within a particular source category, spot checks of a percentage of sources in a category where the category contains a large number of small sources, and the education of trade groups and equipment operators and owners.

SUCCESSES/CHALLENGES

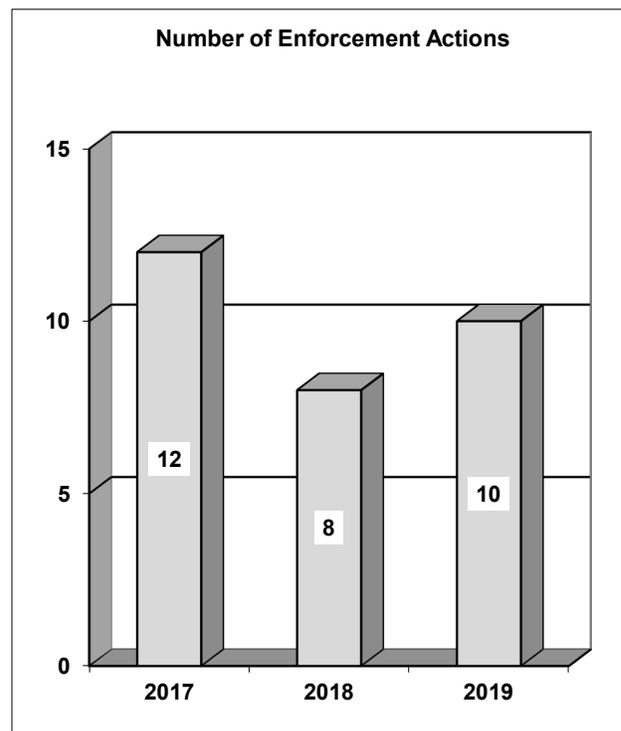

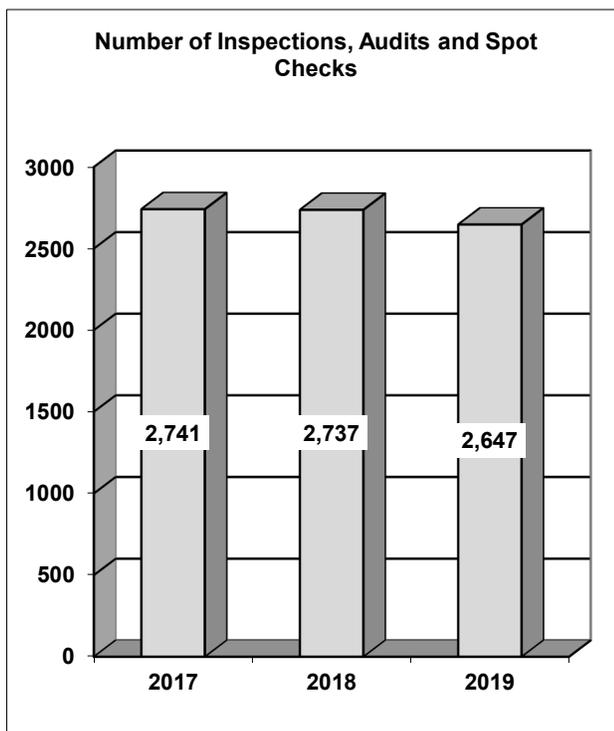

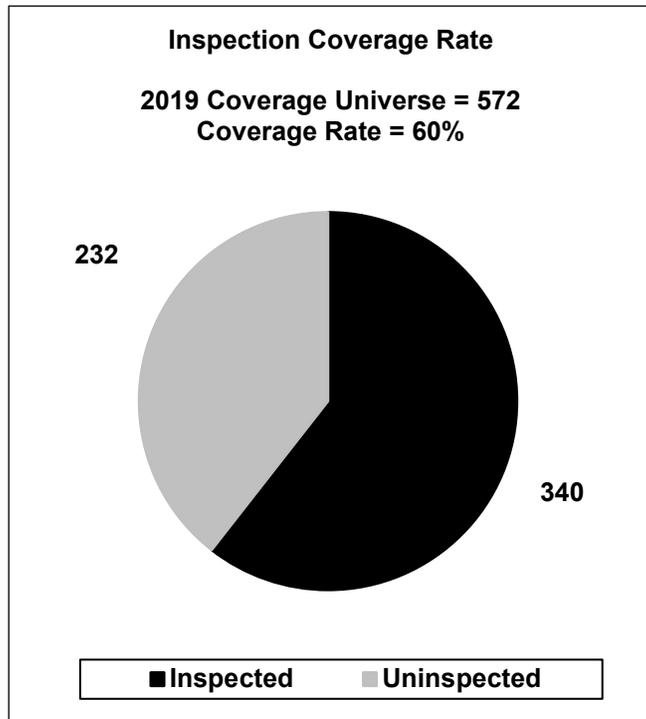

Ensuring compliance at high-impact sources continues to be the focus of the program's resources, and this focused attention contributes to the high compliance rate for this category. In addition to on-site inspections, the program reviews compliance certifications, report submittals, stack test results, sampling results, and continuous monitoring summaries to assess compliance at regulated facilities.

Ambient Air Quality Control Low-Impact Facilities

Air Quality Complaints

PURPOSE

In addition to the almost 12,000 registered or permitted sources of air emissions in Maryland, there are numerous potential sources of air pollution that are not required to be registered or permitted. Examples include some composting operations, construction sites, open burning activities, hot-tar roofing operations, material storage piles, welding and burning activities, and certain portable operations of short duration. These sites or activities can create nuisance conditions such as odors or fugitive dust. The Air Quality Compliance Program responds to complaints regarding nuisance odors and dust from both permitted and non-permitted operations.

AUTHORITY

STATE: Environment Article, Title 2; COMAR 26.11

PROCESS

Complaints are addressed in a number of ways depending on the nature of the complaint. A complaint situation may be of sufficient severity to warrant an immediate site visit. Complaints arising from severe nuisance situations generally result in the program receiving multiple and separate complaints for a single situation. A complaint situation can also be a sporadic occurrence, which may lead to increased surveillance of a site in an attempt to verify the existence of a problem, which may lead to a formal inspection. Some complaints, particularly where only an explanation of what is allowed is needed, can be resolved through phone contact or letters.

If the complaint investigation reveals a violation at a permitted site, the violation and subsequent enforcement action is counted under the ambient air quality control program's performance measures chart. Only those violations that occur at non-permitted sites are counted here; most violations in this category are related to open burning activities or the creation of off-site nuisances caused by odors or dust from sites. Violations such as these rarely result in actual harm, but have the potential to cause harm to the environment or public health, and on this basis are included in this report. Nearly all violations in this program are resolved without the need to take enforcement action, as they generally relate to short-lived activities, are quickly corrected (often at the time of inspection), do not reoccur, and result in no actual harm to public health or the environment.

SUCCESSSES /CHALLENGES

The Air Quality Compliance Program received over 400 complaints in FY19. The program responds to all complaints by telephone, prioritizing those that merit a field inspection. Some complaint situations need multiple follow-up inspections to ensure compliance with air quality requirements. Based on their nature, some complaints at non-permitted sites may need follow-up enforcement action to achieve compliance.

*This line includes responses to complaints at permitted sites and unregistered/unpermitted sites and is used to calculate the coverage rate for complaints. The inspections and any enforcement actions at any permitted sites are captured in the sections for registered sources.

Air Quality Complaints

Asbestos

PURPOSE

The Air Quality Compliance Program's Asbestos Division manages the licensing of asbestos removal contractors and oversees their efforts when removing or encapsulating asbestos to ensure that asbestos is handled in a manner that is protective of human health. Any project that involves demolition or the removal of more than 240 linear feet or more than 160 square feet of asbestos-containing material is subject to federal standards under EPA's National Emission Standards for Hazardous Air Pollutants (NESHAP) program. All projects are subject to additional requirements under state laws and regulations. Projects can range from something as small as a single pipe wrapping to a major removal project at a power plant or other large facility.

AUTHORITY

FEDERAL: Clean Air Act, Title 1, Section 112

STATE: Environment Article, Title 6, Subtitle 4; COMAR 26.11.21

PROCESS

Removing or encapsulating asbestos is required to be done by a contractor licensed by the Asbestos Division. The contractor is required to notify the division of the location of the activity and the approximate amount of asbestos-containing material to be removed or encapsulated prior to undertaking the work. From the information contained in the notification, the division will determine whether the project is required to meet federal standards. About a quarter of all asbestos projects undertaken are subject to federal program requirements. Projects subject to such requirements are considered a priority and an inspection will generally take place. Priority is also given to inspecting contractors with poor performance records, projects in close proximity to other priority projects (for inspection efficiency) and projects for which complaints have been lodged. The focus of an inspection is on determining whether a contractor is adhering to the standards designed to protect workers and the public from exposure to asbestos. Some sites, such as demolition sites, where no notification has occurred but where asbestos may be encountered, are also inspected.

INSPECTION COVERAGE RATE

The inspection coverage rate is computed as the number of sites inspected divided by the number of notifications received. Note that the division receives notifications for any amount of asbestos that is disturbed. This will include notifications for one to two feet of removal in which the project will last for maybe two hours, to notification for thousands of linear and square feet, in which the project may last up to 12 months. State law governs the notification process for small projects, and requires only that the contractor notify the department before the project begins. The larger projects are governed by federal requirements, and the contractor is required to notify at least 10 days prior to beginning the project. It is more likely that an inspection will take place at a site where removal will last a day or more. The division is required by state law to annually inspect

at least one asbestos removal project by each contractor. The division meets this requirement.

SUCSESSES/CHALLENGES

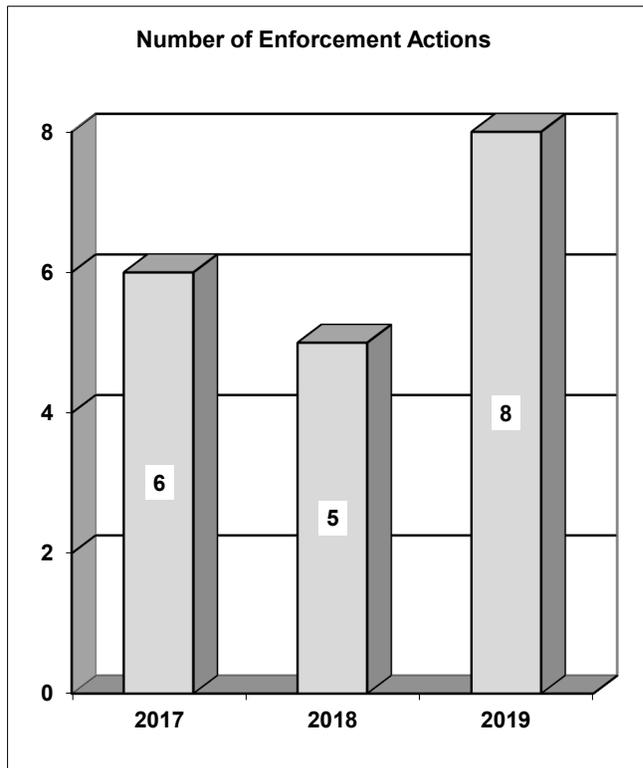

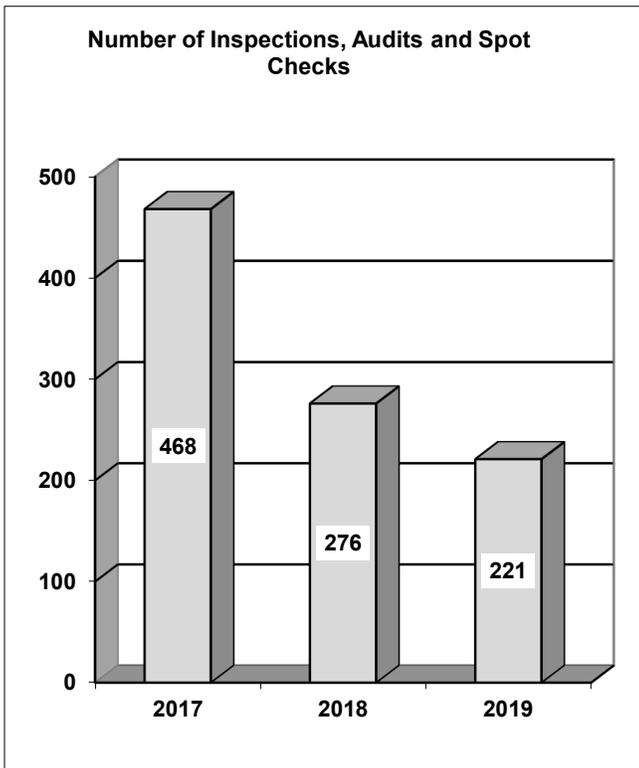

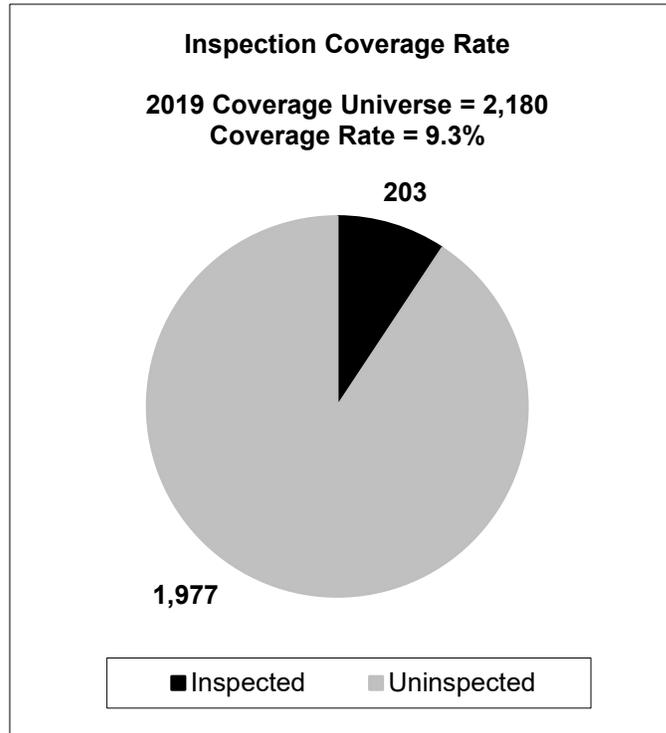

Contractors intending to abate asbestos are required to notify the Asbestos Division. The division generally focuses on inspecting the more substantial projects, while also ensuring that each contractor is inspected at least once per year.

In FY19, inspection staff spent time administering the certification testing for asbestos workers. The division is seeking a third-party contractor to administer the testing so staff can focus on inspections.

Asbestos

Radiation Machines Division

PURPOSE

The Radiation Machines Division (RMD) regulates manufactured electronic sources of radiation to minimize the amount of unnecessary radiation exposure received by the general public and machine operators. These electronic radiation sources include dental and veterinary x-ray machines, mammography (breast imaging) machines, diagnostic and therapeutic radiation machines, security screening devices and other electronic radiation devices used in research or industry.

State regulations, which derive in part from U.S. Food and Drug Administration (FDA) statutory and regulatory directives, require that all radiation exposures be “As Low As Reasonably Achievable.”. Radiation exposure can cause adverse health effects, with risk that varies depending upon the amount of radiation received, frequency of radiation exposures, and radio-sensitivity of body parts. Although the medical benefits of radiologic diagnostic and therapeutic treatment procedures far outweigh potential risks of sustained biological damage, evidence suggests that cells in the human body can be damaged by numerous small exposures over time and that these multiple exposures have a cumulative health effect that may be as detrimental as receiving a single large exposure. Due to the increased use of radiation for diagnostic and therapeutic procedures, there continues to be a growing awareness of the impacts on human health from radiation machines.

AUTHORITY

FEDERAL: Radiation Control for Health and Safety Act of 1968, 21CFR1000;
Mammography Quality Standards Act; 21CFR900

STATE: Environment Article, Title 8 “Radiation”;
COMAR 26.12. Radiation Management

PROCESS

RMD ensures all radiation machine facilities are inspected on cycles required by statute, regulation, administrative policy, or contract. Note that mammography inspection reports are provided to the FDA for follow-up enforcement actions, but the FDA’s response actions are not included in this report.

Dental, veterinary, and mammography facilities are required to renew the radiation machine facility registration of their x-ray equipment every two years. Facilities with x-ray machines subject to certification are required to renew the radiation machine facility registration on the same schedule as the certification inspection frequency presented in the chart shown later below.

SUCSESSES/CHALLENGES

Successes in FY19 include the development and implementation of an automated and efficient invoice system for the radiation machines facility fees. Information is now drawn from the RMD database to populate invoices directly, thereby eliminating the task of manually typing in the information.

RMD purchased tablets/software for the division’s inspectors to improve efficiency. The tablets have reduced paperwork, prevented the loss and misplacement of files, and reduced inspection times. This has improved productivity and reduced the disruption of dental facilities’ business operations, improving customer service.

The chart below shows the types of facilities regulated and the frequency at which they are inspected. Note that the words machine and tube are used interchangeably.

Facility Type	Registered X-ray Tubes*	Inspection Frequency
High Energy & Particle Accelerators	1 facilities, 1 certified tubes	Annual
Medical (Therapy) Accelerators	47 facilities, 80 certified tubes	Annual
Hospitals	60 facilities, 1,241 certified tubes	Biennial
Physicians: Chiropractic, MD, GP, Podiatric	1,286 facilities, 1,936 certified tubes	Biennial
Industrial	350 facilities, 730 certified tubes	Triennial
Dental	2,790 facilities, 10,300 tubes	Triennial
Veterinary Stationary	471 facilities, 515 tubes	Triennial
Mammography	133 facilities, 200 tubes	Annual
Veterinary Dental	231 facilities, 234 tubes	Triennial

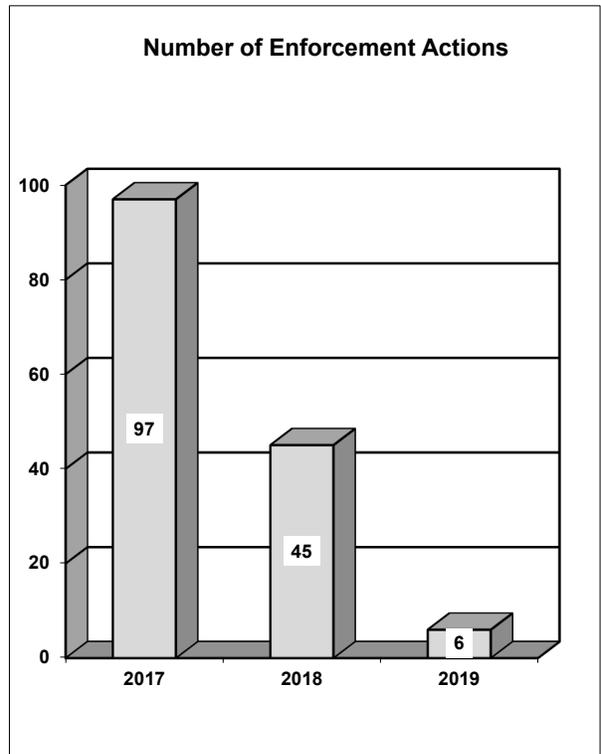

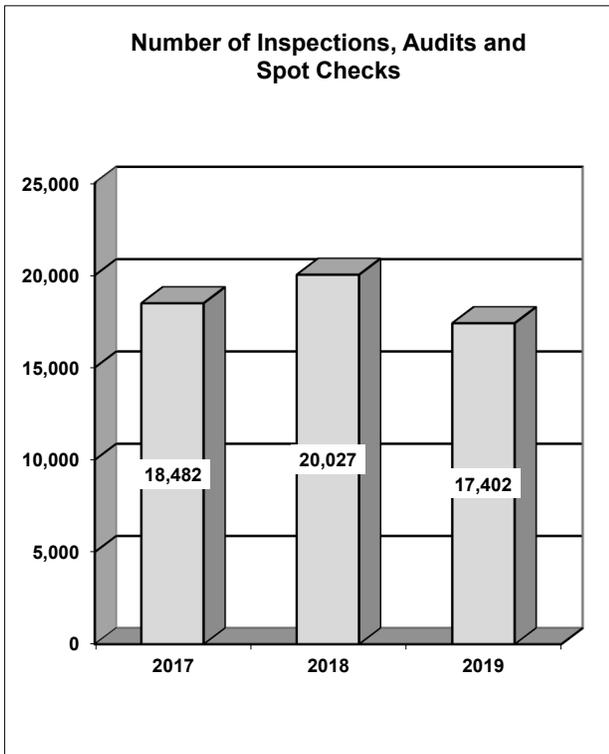

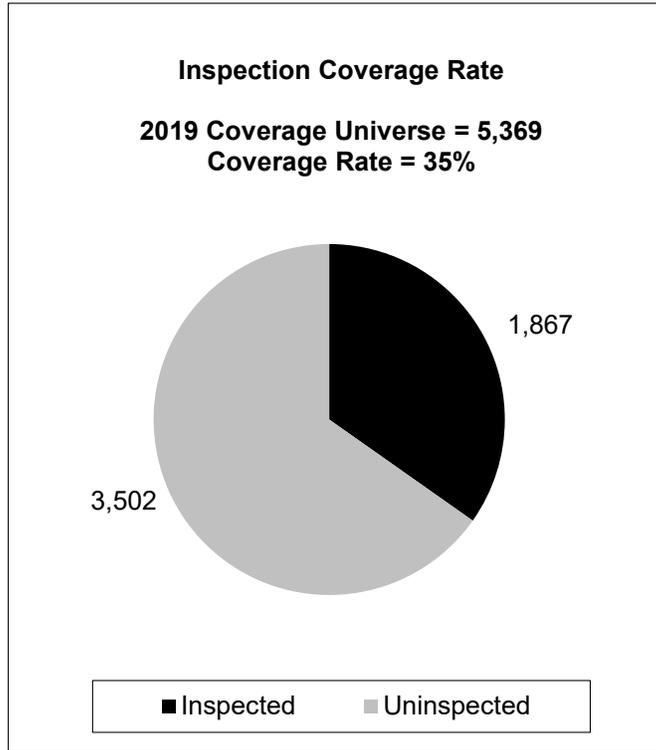

*Code of Maryland Regulations (COMAR) 26.12.03 states that “Radiation Machine” means a device that is capable of producing radiation. On any radiation-producing equipment with more than one x-ray tube, or other single point from which radiation may be emitted, each x-ray tube or radiation emission point is considered a separate radiation machine. “Tube” is defined in COMAR 26.12.01.01 as an x-ray tube or other single point from which radiation may be emitted.

* Coverage is computed as the number of sites inspected divided by the sum of the number of facility registrations.

Radiation Machines

Radioactive Materials Division

PURPOSE

The Radioactive Materials Division (RAM) regulates the use, handling and control of radioisotopes at hospitals, cancer treatment facilities, diagnostic imaging centers, private medical practices, industrial irradiators, engineering firms, research laboratories, academic institutions, nuclear pharmacies, and manufacturers and distributors of sealed sources and devices in accordance with U.S. Nuclear Regulatory Commission (NRC) guidance and criteria. Regulation is accomplished through the issuance of licenses and inspection of the licensees, and serves to protect the health and safety of radiation workers and the general public. Facility radiation safety programs and authorized activities are evaluated during the licensing and inspection process to ensure compliance with Maryland Regulations for the Control of Ionizing Radiation in such areas as radiation safety, security, storage and control, transportation, disposal, training of personnel, possession of protective devices, and control of radiation hazards.

RAM also regulates companies licensed in other jurisdictions that use radioactive material in Maryland under the terms and conditions of reciprocal recognition. RAM is the primary state responder to radiological events such as transportation incidents and loss or theft of radioactive material. RAM also provides radiological technical input and coordination for statewide emergency preparedness in the areas of shipment of high-level radioactive waste through Maryland; increased security at certain types of facilities possessing high-risk radioactive material; facilitation of training local responders for radiation emergencies; and assistance in the evaluation, coordination, and implementation of policies and procedures for preventive radiological nuclear detection. RAM performs engineering and radiation-safety evaluations to determine the ability of sealed sources and devices to safely contain radioactivity under the conditions of use for sealed sources and devices manufactured in Maryland. These evaluations are summarized in registrations that are maintained by the NRC in the National Sealed Source and Device Registry. General licenses are used to regulate low-strength radiation devices that have inherent safety features. Such licenses are issued by the manufacturer and registered with RAM. RAM monitors and tracks the transfer and disposal of these generally licensed devices.

AUTHORITY

FEDERAL: Atomic Energy Act of 1954, as amended;
10 CFR (Nuclear Regulatory Commission) Parts 1-171

STATE: Environment Article, Title 8; "Radiation";
COMAR 26.12. Radiation Management

PROCESS

RAM issues licenses with a seven-year term for approximately 50 types of radioactive material uses. RAM inspects facilities for compliance with radiation regulations and

adherence to license conditions and radiation-safety procedures and practices. Inspections are performed by one or more inspectors at a frequency based on the quantity, activity and toxicity of the material; the potential hazard resulting from the use; and the nature of the operation. Inspection frequency ranges from annual to every five years. When violations occur, corrective actions are required and verified. RAM also conducts investigations in response to incidents and allegations. RAM also oversees the decommissioning of previously-licensed facilities, conducts safety evaluations on sources and devices, and performs pre-licensing visits to all applicants prior to the issuance of a new license. Additionally, RAM performs inspections on at least 25% of the most hazardous radiation operations conducted in Maryland by out-of-state radioactive material licensees under reciprocal recognition of their licenses. RAM maintains an equipped and trained radiological emergency response team with a mission to respond on a 24/7 basis to radiological emergencies in the public domain and to provide technical assistance to local law enforcement and emergency responders.

SUCCESSSES/CHALLENGES

Successes in FY19 include maintaining an adequate and compatible Radioactive Materials Program in accordance with NRC criteria, continued implementation of the state's Preventive Radiological Nuclear Detection activities and maintenance of response capabilities, the full implementation of federally-mandated radioactive material security regulations for licensee's with high-risk sources and the continuation of training of state and local personnel to ensure preparedness for a nuclear utility accident. RAM, with the assistance of the U.S. Department of Energy National Nuclear Security Administration, continues to remove large quantities of unwanted radioactive material from the state in the effort to eliminate potential security threats. The RHP successfully participated in a Plume Phase exercise with the Peach Bottom nuclear plant, and trained for exercises with the Calvert Cliffs nuclear plant.

RAM approved a revision to a Sealed Source Device Registration to allow the manufacturer of the GammaPod radiation therapy device to reduce the number of radioactive sources used in the device to target tumors without loss of effectiveness. The use of fewer radioactive sources helps minimize the amount of healthy tissue being affected during treatment for breast cancer. The FDA has now approved GammaPod for clinical use nationwide.

RAM, in an effort to enhance customer service, continues to implement a checklist-style licensing application for X-ray Refraction (XRF) lead paint gauges that use radioactive material. The checklist helps applicants avoid submitting incomplete applications, which delays approval due to the need for additional information. Applications using the checklist approach get done in a month instead of up to seven months under the prior application process. RAM also developed an abbreviated annual review checklist for those licensees with XRF lead paint gauges using radioactive material. This has improved efficiency and compliance of those licensees.

INSPECTION COVERAGE RATE

The following chart shows the inspection frequency, the number of licenses that are inspected at that frequency, and an example of the type of licenses:

Inspection Frequency	Number of Licenses	Examples of License Types
Annual	4	Gamma Knife (cancer therapy) GammaPod (breast cancer therapy) Industrial Radiography
2 Years	50	Manufacturing and Distribution Panoramic Irradiators Medical Research Nuclear Pharmacies Remote Afterloader (cancer therapy)
3 Years	113	Self Shielded Irradiators Hospitals and Medical Facilities Brachytherapy (cancer therapy) Mobile Nuclear Medicine Academic Research
5 Years	357	Portable and Fixed Nuclear Gauges Diagnostic Nuclear Medicine Research Laboratories General License Distribution

Notes for above table:

Licenses inspected in the annual, two-year and three-year inspection frequencies are the most complex and represent those types of radioactive material activities with the greatest radiation hazards to users and members of the general public.

LAND AND MATERIALS ADMINISTRATION

Land and Materials Administration

Executive Summary

The Land and Materials Administration (LMA) is comprised of seven programs: Resource Management Program (RMP), Oil Control Program (OCP), Solid Waste Program (SWP), Land Restoration Program (LRP), Mining Program, Technical Services and Operations Program (TSOP), and Lead Poisoning Prevention Program (LPPP). Many of these programs have components that overlap with others. Aspects of hazardous waste regulations can be found in RMP, SWP, LRP and TSOP. In addition, SWP inspectors conduct inspections on behalf of RMP sections. Key LMA successes in four areas are summarized below.

LMA's activities aimed at reducing the risks of lead exposure continue to show significant successes as measured by blood-lead sampling results. Lead data is collected on a calendar-year basis. Of the 131,626 children tested in CY18, a total of 390 (0.3%) were identified with a venous or capillary blood lead level ≥ 10 micrograms per deciliter ($\mu\text{g}/\text{dL}$). This was an increase of 2 children compared to 388 during CY17. Children identified with a first-time venous or capillary blood lead level ≥ 10 $\mu\text{g}/\text{dL}$ during CY18 totaled 295 (0.2%). This was a decrease of 10 children with new cases compared to CY17 (305). It should be noted that the incidence and prevalence percentages for blood lead level ≥ 10 $\mu\text{g}/\text{dL}$ remained the same in CY18. There was a decrease in the number of children with blood lead levels between 5 to 9 micrograms per deciliter ($\mu\text{g}/\text{dL}$) even though there was an increase in the population tested.

Risks to public health and the environment from underground storage tanks (USTs) were also kept to a minimum this past year. EPA requires that UST facilities be inspected once every three years. The OCP Compliance Division met this requirement by overseeing the inspection of 911 of the 2,747 registered UST facilities in FY19. The facilities inspected continue to show a good compliance rate; with significant violations found at only 4% of the sites.

In another success story, LMA's Scrap Tire Unit continues the cleanup of scrap tires from illegal stockpiles. New stockpiles continue to be discovered every year; during FY19 a total of 12 new sites containing approximately 1,116 scrap tires were discovered. A total of 21 stockpiles were cleaned up in FY19, resulting in the removal of 7,197 scrap tires. Since the inception of the Scrap Tire Unit in 1992, over 11 million scrap tires have been cleaned up from 1,119 stockpiles.

Finally, illustrating the strength and maturation of a relatively new regulatory requirement, 99% of the 458 brick-and-mortar electronics retailers inspected were in compliance with electronics recycling requirements.

**Land and Materials Administration
Performance Measures Executive Summary**

	<u>2018 Totals</u>	<u>2019 Totals</u>

Land Restoration Program

PURPOSE

LRP protects public health and the environment by identifying sites that are contaminated or potentially contaminated by Controlled Hazardous Substances (CHS). Until 1997, Maryland placed sites where hazardous substances were released, or possibly released, on the State Master List and in the Disposal Site Registry. The sites were prioritized for remedial activities. Starting in 2013, the State Master List was revised and renamed. Newly identified sites are now recorded on the Brownfield Master Inventory (BMI) List - Active Sites (Appendix F) or the BMI List - Archive Sites (Appendix G). The BMI List is available on MDE's website here:

mde.maryland.gov/programs/Land/MarylandBrownfieldVCP/Pages/BrownfieldMasterInventory.aspx

AUTHORITY

FEDERAL: Comprehensive Environmental Response, Compensation and Liability Act
STATE: Environment Article, Title 7, Subtitle 2; COMAR 26.14

PROCESS

LRP conducts and oversees environmental assessment and cleanup projects. The assessment activities include investigating and sampling sites to determine whether cleanup is necessary. If the identified contamination is determined to represent a risk to public health or the environment, remedial activities are conducted to address the sites contaminated by CHS. Assessments and cleanups are conducted based on available resources. The Disposal Site Registry includes all the sites for which the state performed a preliminary site assessment and determined hazardous waste is present. For these sites, state funds may be used to conduct remedial action as no viable responsible party has been identified. This list is updated annually. The Disposal Site Registry includes all the information and ranking set forth in Section 7-233(f)(2).

SUCCESSES/CHALLENGES

LRP maintains a list of potential hazardous waste sites so that public health risks are avoided, cleanups can be planned and executed, and economically-beneficial redevelopment can occur. Before the development of the BMI in 2013, this list was known as the State Master List. It included properties known by the state to be contaminated or potentially contaminated and included sites on the federal Compensation and Liability Information System and on EPA's Archive list. This list included sites that met the brownfields definition. The LRP also maintained a Site-Specific Assessments list, otherwise known as the State "Non-Master List" of sites.

The current BMI List serves as the tool for tracking new and closed sites. As of June 30, 2019, there were 1,162 active sites and 1,241 archived sites on the BMI List, which includes Voluntary Cleanup Program sites; sites assessed using federal grant funding; formerly-used defense facilities; assessment and cleanup activities at sites subject to the CHS Response Plan; and sites identified as being impacted by CHS but subject to other regulatory authorities such as the federal Corrective Action Program, the federal Toxic Substances Control Act, or Maryland's Solid Waste Program.

The LRP is continuing to work with EPA on seven active, private National Priority List (NPL) sites and one site that is being managed under the EPA's Superfund Alternative Site Initiative, which allows the Responsible Party to implement an NPL-caliber remediation without NPL listing.

Hazardous Waste

PURPOSE

The federal Resource Conservation and Recovery Act (RCRA) established a national program of hazardous waste management. MDE has been granted authorization by the EPA to be the primary implementer of most elements of the federal hazardous waste regulatory program in Maryland. Regulations govern management of hazardous waste from the point of initial generation through its final disposition by reuse, recycling, treatment, or disposal. Maryland's regulatory program includes elements that are more stringent and broader in scope than the federal program. Important elements of this regulatory program include:

- identification and tracking of hazardous waste handlers (generators, transporters, and operators of permitted facilities) through issuance of identification numbers and maintenance of a related database;
- detailed standards for hazardous waste management;
- tracking shipments of hazardous waste from generation to disposal through the manifest system;
- certification of transporters of hazardous waste;
- tracking waste generation and management through a biennial reporting requirement;
- a permitting program requiring permits for persons who treat hazardous waste, store hazardous waste for periods of time longer than 90 days, operate a hazardous waste disposal unit, or maintain a closed hazardous waste disposal unit; and
- compliance evaluations to assess compliance with applicable requirements, and take enforcement actions and require corrective measures as necessary.

AUTHORITY

FEDERAL: RCRA - Subtitle C

STATE: Environment Article, Title 7, Subtitle 2; COMAR 26.13

PROCESS

RMP is responsible for reviewing CHS facility permit applications to treat, store or dispose hazardous waste. Through the permitting process, RMP evaluates the permit applicant's ability to manage hazardous waste safely and in conformance with applicable regulatory requirements. The permit specifies all requirements that the permit holder is subject to in conducting the permitted activities. Tentative determinations by RMP to issue or deny an application for a permit include opportunities for public review and comment. The permit holder is evaluated for compliance with the terms of the permit in compliance inspections of the permit holder's facility.

TSOP Hazardous Certification and Reporting Section (HCRS) is responsible for collecting, reviewing and issuing RCRA Subtitle C Site Identification Numbers (also called EPA ID Numbers) and ensuring the data is translated to EPA's RCRAInfo database. HCRS also oversees the collection and review of the Biennial Hazardous Waste Report (BR). The BR is a summary of waste generated during the odd calendar years and reported during even calendar years. HCRS staff reviews the reports, and extracts and translates information reported by Large-Quantity Generators (LQGs) into

RCRAInfo. HCRS reviews and tracks Uniform Hazardous Waste Manifests (manifests), which are completed when generated wastes are shipped off-site. Lastly, HCRS is responsible for issuing CHS hauler and vehicle certifications. This includes collecting and reviewing applications and vehicle inspections. In the State of Maryland, a transporter cannot pick up or drop off hazardous waste without a hauler/vehicle certification issued by MDE. Failure to comply with state and federal laws and regulations can result in HCRS issuing corrective actions.

SWP is responsible for compliance at hazardous waste facilities, which include permitted Treatment, Storage and Disposal (TSD) facilities and federally-defined LQGs and small-quantity generators (SQGs). All permitted TSD facilities and those that receive off-site waste are inspected at least once a year. LQGs, defined by federal regulations as generating 2,200 pounds or more of hazardous waste in any calendar month, and are inspected at least once every five years. New LQGs and those that have not been inspected in the last three years are first priorities. Maryland has approximately 455 LQGs and 13,000 SQGs.

SUCSESSES/CHALLENGES

The total number of sites inspected in FY19 was 132 as opposed to 158 in FY18. Additionally, the total number of inspections and spot checks in FY19 was 163 compared to 198 in FY18. SWP's Compliance Division continues to focus on performing actual physical inspections to meet EPA's grant commitments rather than audits conducted through in-office file review.

FY18 was a reporting year for the biennial hazardous waste report. Enforcement actions increased due to HCRS issuing Failure to Comply letters to facilities that did not comply with reporting requirements. In FY19, enforcement actions decreased to 73 from 242 in FY18. SWP's Compliance Division issued 22 enforcement actions and the HCRS, for the first time, issued 51 Notice of Violations to facilities that did not comply with reporting requirements.

Compliance assistance increased in FY19 to 65 from 18 in FY18. HCRS conducted 59 compliance assistance resulting from the Failure to Comply letters that were issued in FY18. SWP's Compliance Division conducted six compliance assistance in FY19.

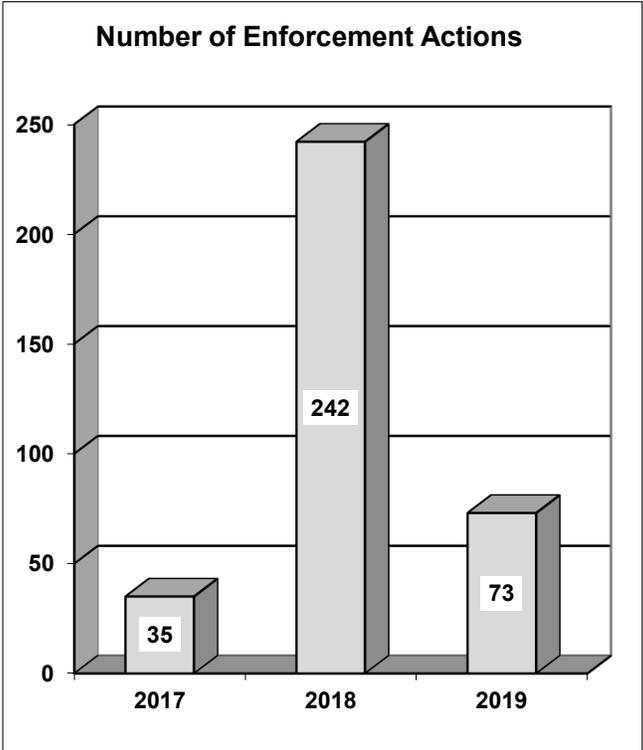

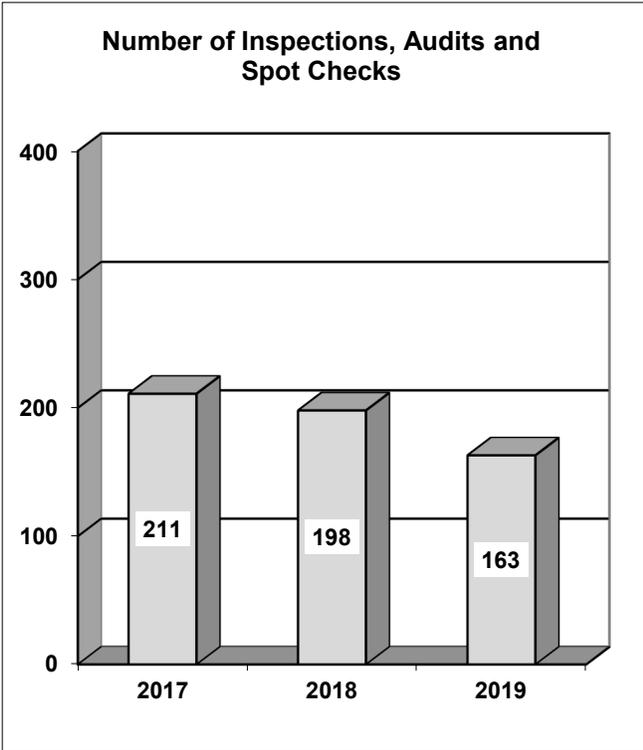

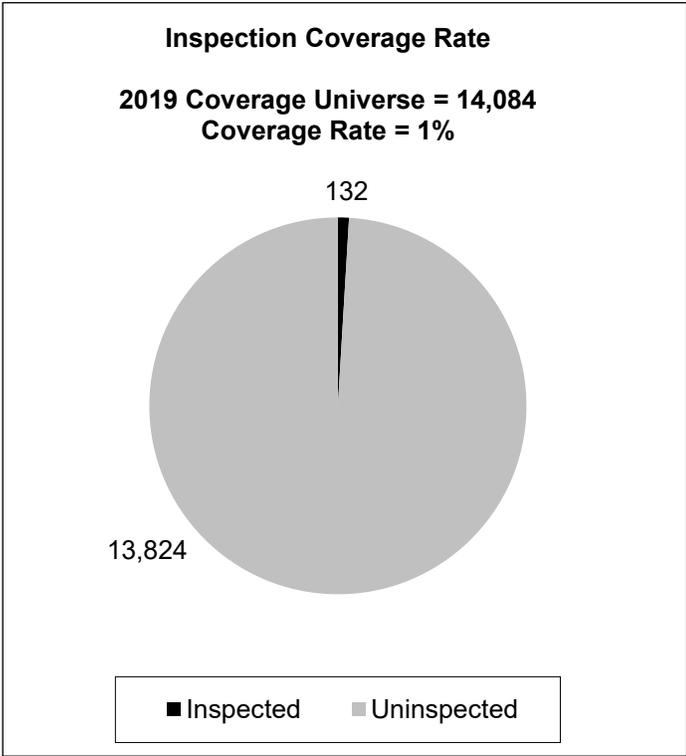

HCRS continues to work on a major hazardous waste generator universe cleanup project. Universe cleanup includes changing generator statuses and deactivating closed facilities. HCRS is undertaking the cleanup as a result of reviewing the 2017 Biennial Hazardous Report and to prepare for adoption of the new 2021 SQG Re-Notification Rule passed by EPA in 2017.

The universe of generators increased to 14,084 in FY19 from 13,982 in FY18 despite the major cleanup. This increase is attributed to new generators obtaining EPA ID Numbers in order to be able to use EPA's eManifest Database. Although Very Small Quantity Generators are exempt from obtaining EPA ID Numbers per regulations, they are obtaining EPA ID Numbers so they can log into the eManifest database.

Hazardous Waste

Lead Poisoning Prevention

PURPOSE

LPPP oversees activities designed to reduce the incidence of childhood lead poisoning. These activities involve accreditation and oversight of lead abatement service contractors, maintenance of a registry of blood lead levels, investigation of childhood lead poisoning cases, and enforcement of the statute and regulations. TSOP works closely with LPPP and is responsible for the maintenance of the registry of rental properties.

AUTHORITY

FEDERAL: Toxic Substances Control Act
Centers for Disease Control

STATE: Environment Article, Title 6, Subtitles 3, 8 & 10; COMAR 26.16.01-.04 and
Environment Article, Title 7, Subtitle 2; COMAR 26.02.07

PROCESS

Maryland law requires that all blood lead level (BLL) test results be reported to MDE, which in turn reports all results for children at risk to the local health departments for case management. Through these BLL referrals and by other means, if LPPP discovers that an affected property (pre-1978 rental dwelling properties) does not meet the required standards of care (risk reduction, registration of the rental property, and distribution to tenants of two documents explaining tenant rights and the hazards of lead paint), appropriate corrective actions against a violating party may be taken. In order to meet the required standards of care, accredited third-party inspectors and/or contractors may be hired by property owners to meet these compliance standards. LPPP may perform oversight of these inspectors and/or contractors to ensure compliance with regulatory standards as outlined in the statute and regulations so that further exposure to lead hazards is kept to a minimum.

TSOP's Lead Rental [Property] Registration Section (LRS) regulates all affected properties (pre-1978 rental dwelling properties). LRS collects information from owners of affected properties and issues tracking numbers for the purpose of registration, inspections, certification and annual renewals of affected properties. TSOP has an Enforcement and Compliance Section (ECS) with staff tasked with reviewing the registration status of affected properties and whether the owner of the property has obtained a lead inspection certificate, if required. If properties are out of compliance, TSOP tracks their return to compliance, and may take appropriate enforcement actions where necessary.

SUCCESSSES/CHALLENGES

Maryland's goal is to eliminate the presence of lead in the blood of children. About one quarter of Maryland's youngest children were tested in CY18. Lead data is collected on a calendar-year basis. During CY18 a total of 131,626 (24%) children were tested from a universe of 550,484 children 0-72 months of age. The number of children tested in CY18 (131,626) is relatively the same compared to the number of children tested in

CY17 (131,832). The population of children 0-72 months of age increased from CY17 to CY18 by 2,553 children.

Of those 131,626 children tested in CY18, a total of 390 (0.3%) were identified with a venous or capillary blood lead level ≥ 10 micrograms per deciliter ($\mu\text{g}/\text{dL}$). This was an increase of two children compared to 388 during CY17. Children identified with a first-time venous or capillary blood lead level ≥ 10 $\mu\text{g}/\text{dL}$ during CY18 totaled 295 (0.2%). This was a decrease of 10 children with a new incidence case compared to CY17 (305). It should be noted that the incidence and prevalence percentages for blood lead level ≥ 10 $\mu\text{g}/\text{dL}$ remained the same in CY18. There was a decrease in the number of children with blood lead levels between 5 to 9 micrograms per deciliter ($\mu\text{g}/\text{dL}$) even though there was an increase in the population tested.

The department seeks to continuously improve our approach of removing lead exposure in children. In 2016 a revised Targeting Plan for children recommended a revised strategy for testing children for lead exposure. It was the first comprehensive reassessment of lead testing strategies in the state since 2004, and incorporates new recommendations from the U.S. Centers for Disease Control and Prevention regarding blood lead levels that will require follow up action from clinicians, government agencies, and others. As a result of the plan, all health care providers are now required to test all one- and two-year-olds. The number of children tested in CY18 was 18.9% greater than the 2010 – 2015 average.

When lead is identified in a home with children the department responds quickly to ensure that exposure is stopped. In FY19, LRS and ECS issued over 8,000 Notices of Violation (NOV), Notices of Non-Compliance (NNCs), and other actions for failure to register or renew affected properties or failure to have valid inspection certificates. The inspection coverage of the regulated community, including inspections by accredited third parties was 35% in FY19, compared to 42% in FY18. Accredited inspectors are hired by property owners primarily to perform lead inspections required by law on pre-1978 residential rental properties. Inspections are mandated before tenants move into pre-1978 residential rental units. The results of these inspections are submitted to MDE.

The department is using information technology to find properties that are not registered and to work with property owners to get their properties inspected and certified. TSOP is employing database tools and research to identify affected properties that are not registered, or do not have valid inspection certificates. LRS and ECS contact owners who have not registered or renewed their rental properties or obtained certificates and, if warranted, issues a NOV or NNC.

Good customer service includes educating landlords and working with them to protect children. When appropriate the department uses compliance assistance to help landlords come into compliance. Thus, although the number of sites inspected by both TSOP and LPPP inspectors decreased from 2,649 in FY18 to 2,079 in FY19, there was also an increase in compliance assistance provided to owners in FY19 of 1,486 compared to 78 in FY18. Along with increased assistance, the department saw lower exposure rates in Maryland children.

Lead Poisoning Prevention

Performance Measure	TOTAL		
PERMITTED SITES/FACILITIES

****There was a change in tracking method starting in FY13

Lead Poisoning Prevention

Oil Control Program - Aboveground Facilities

PURPOSE

OCP performs a broad range of activities related to the safe handling, storage, and remediation of petroleum products. The CP issues permits and performs oversight of aboveground storage facilities, transportation facilities, and oil-contaminated soil treatment facilities. Permits are also issued by OCP for the discharge of treated oil-contaminated water. In addition, OCP issues licenses and collects fees for the import of petroleum products into Maryland.

AUTHORITY

STATE: Environment Article, Title 4, Subtitle 4; COMAR 26.10

PROCESS

OCP is responsible for reviewing permit applications, inspecting sites prior to writing permits, and issuing Oil Operations Permits for facilities handling oil. Site visits may also lead to the discovery of compliance violations. During inspections, facility conditions are documented and the permittee is advised of the status of compliance. If corrective action is warranted, the facility is directed in accordance with department guidelines and procedures. OCP also responds to aboveground oil spills. In addition, OCP licenses entities that transfer oil into Maryland and collects a fee on the transfer.

SUCCESSSES/CHALLENGES

The management of aboveground storage tanks containing petroleum continues to be in good standing as a result of a combination of compliance assistance, permit application review, and enforcement. Site visits and permit application reviews have revealed opportunities for compliance assistance at facilities to avoid releases into the environment or other possible emergencies. This shows in the inspection of 351 facilities in FY19, an increase from 296 in FY18. In FY19, 289 oil transfer licenses were issued, an increase from 277 in FY18.

This page intentionally left blank.

Number of injunctions obtained	0	0	0
Number of penalty and other enforcement actions	5	0	5
Number of referrals to Attorney General for possible criminal action			0
PENALTIES			
Amount of administrative or civil penalties obtained (\$ collected in FY)			\$7,000

* Permits/licenses. This includes aboveground storage tanks and oil-contaminated soil operations. The Oil (Contaminated Soil) Operations Permit is issued to facilities that store and/or treat soil contaminated with petroleum products from underground storage tank leaks or surface spills. Due to the small number of facilities involved, these numbers were incorporated into the Oil Aboveground Facilities numbers beginning in FY99.

** Coverage rate above is computed as the total number of permitted sites inspected and dividing that by the sum of the total number of permits/licenses in effect.

Oil Control - Aboveground Facilities

Oil Control Program - Pollution Remediation Activities

PURPOSE

OCP oversees remediation activities at sites where petroleum products have been discharged and are impacting soil or groundwater. The oversight ensures that responsible parties remediate sites in a timely manner, protecting public health and the environment. The majority of sites are gasoline service stations, both operating and closed. Sites also include commercial and residential heating oil systems, and businesses that have their own petroleum distribution systems for use in vehicle fleets.

AUTHORITY

FEDERAL: RCRA - Subtitle I

STATE: Environment Article, Title 4, Subtitle 4; COMAR 26.10

PROCESS

When a release of petroleum product is reported to the OCP, appropriate staff is assigned to the investigation. Groundwater and soil cleanups can be technical in nature and require detailed oversight. The OCP will prioritize the response to the release based on multiple factors including the oil type, amount released, and the potential impact to the health of the public and the environment. Most remedial sites will require frequent inspections and meetings. During an inspection, the responsible party will be advised of the direction of the cleanup and status of compliance. Each site is in violation by virtue of the fact that a release has occurred and corrective action will be performed in accordance with MDE's guidelines and procedures. Enforcement actions may be taken if the responsible party is not complying with cleanup orders.

SUCSESSES/CHALLENGES

Three major factors maintain the success of the OCP in managing cleanups: 1) the presence of a strong technically-proficient field staff, 2) an emphasis on removing the worst contamination from the ground by over excavating during the removal of an underground storage tank (UST), and 3) a strong presence by the UST Compliance Division. The number of active remediation sites decreased in FY19 to 835 from 849 in FY18.

* This number is only sites that are active at the end of the fiscal year. Additional sites that open and close within the year, and sites that are evaluated but do not lead to an open remediation case, are not counted in this number, but they are counted as compliance evaluations.

Oil Pollution Remediation Activities

Oil Control Program – Underground Storage Tank Systems

PURPOSE

The Oil Control Program (OCP) inspects underground storage tanks with the goal of reducing the incidence and severity of releases associated with the underground storage of regulated substances. This is accomplished by ensuring compliance with operational requirements including the following: release detection; corrosion protection; overfill prevention; financial responsibility requirements; and construction standards. Sites can include service stations, oil terminals, hospitals, schools, military facilities, and marinas.

AUTHORITY

FEDERAL: RCRA - Subtitle I

STATE: Environment Article, Title 4, Subtitle 4; COMAR 26.10

PROCESS

MDE requires all regulated underground tank systems to be registered with the Oil Control Program. In addition, all system technicians, removers, and inspectors must pass a test given by the OCP and maintain a valid certification. Every three years, at a minimum, each federally-regulated UST system is inspected as required by the U.S. Environmental Protection Agency (EPA). A tank owner is required to hire a certified third-party inspector to complete the inspection. When violations are found, an OCP inspector will conduct a follow up investigation and issue corrective action if warranted.

SUCSESSES/CHALLENGES

A strong field presence of technically-proficient staff is necessary for achieving and maintaining compliance at facilities and thereby protecting water resources from one of the state's most prevalent environmental risks. The EPA requires that UST facilities be inspected once every three years. The OCP Compliance Division met this requirement by overseeing the inspection of 911 of the 2,747 registered facilities in FY19. The facilities inspected continue to show a good compliance rate due to the diligence and compliance assistance that the OCP Compliance Division has been able to provide over the last several years.

* Certified UST technicians and removers are part of the regulated community and, therefore, the inspection universe, and were included in this report starting in FY00.

** Coverage rate is computed as the total number of sites inspected divided by the total number of registered UST sites. Technician and Remover Certifications are part of the Program's universe. However, this number is not included in coverage rate in order not to bias the evaluation of the Program's goal to visit each underground storage tank system on a routine basis.

Oil Underground Storage Tank Systems

Refuse Disposal

PURPOSE

Improper handling of society's byproducts in the form of domestic, commercial and industrial wastes can pose direct threats to public health and the quality of Maryland's water resources. (SWP is responsible for the review of the technical information needed to support applications for new solid waste disposal facilities and coal combustion by-product (CCB) landfills. Inspections and enforcement of regulations are conducted routinely at permitted and unpermitted disposal facilities, CCB landfills, CCB storage sites, and for CCB transportation vehicles. Regulated solid waste acceptance facilities include municipal landfills, rubble landfills, land-clearing debris landfills, non-hazardous industrial waste landfills, municipal incinerators, solid waste processing facilities, and transfer stations. Corrective action will be performed in accordance with MDE's guidelines and procedures if violations are found.

AUTHORITY

FEDERAL: RCRA - Subtitle D; 40 CFR 257 and 258

STATE: Environment Article, Title 9, Subtitle 2; COMAR 26.04.07, 26.04.10

PROCESS

Permits are required for the construction and operation of solid waste acceptance facilities. The permit review activities cover a broad range of environmental and engineering elements to ensure state-of-the-art techniques are used to protect public health and environment. SWP geologists and engineers review groundwater monitoring and soil gas data required by the permit to detect aqueous and gaseous pollutants, which may be migrating through the ground from landfills and dumpsites. When releases are detected, plans for landfill caps, groundwater and gas extraction, and treatment systems are required, and subject to SWP's review and approval prior to implementation. Routine unannounced inspections are performed to ensure compliance. Inspectors also conduct complaint inspections regarding unpermitted facilities and open dumps. Inspections and investigations are conducted to find, stop, and clean up illegal dumps and reduce the problems they cause, including odors, soil erosion, discharge of pollutants to surface water, and groundwater pollution. If violations are found, corrective actions are conducted in accordance with MDE's guidelines and procedures.

SUCCESSSES/CHALLENGES

Inspections and enforcement action remained relatively unchanged when compared to 2018. In 2019 Refuse Disposal enforcement actions decreased by 2 (FY19 had 51 compared to 53 in FY18), and one action was referred to the Environmental Crimes Unit for review. The total number of inspections, audits, and spot checks increased from 1,289 in FY18 to 1,332 in FY19. There were slight decreases in the inspection coverage rate from 100% in 98%, and the number of sites inspected slightly decreased with 210 sites inspected compared to 236. In FY19, compliance assistance actions increased to 11 from 4 in FY18.

*There were 105 permitted sites throughout the year, this number is added to the 131 unpermitted sites to determine the coverage universe of 236.

Refuse Disposal

Scrap Tires

PURPOSE

Licenses and approvals are required for the hauling, collection, storage, processing, recycling, and burning (as tire-derived fuel) of scrap tires. These licenses and approvals ensure that scrap tires are managed in a manner protective of public health and the environment. In coordination with the Maryland Environmental Service (MES), the Scrap Tire Unit may arrange for cleanup of illegal scrap tire dumps. Enforcement actions may be taken to ensure compliance with the scrap tire laws, regulations, and license and approval conditions.

AUTHORITY

STATE: Environment Article, Title 9, Subtitle 2;
Environment Article, Title 10, Nuisance Abatement;
COMAR 26.04.

PROCESS

Any person who collects, stores, or hauls as part of a commercial business; recycles; or processes scrap tires is required to obtain the applicable license or approval. To obtain a license or approval, a person must submit a complete application and all required information. The Scrap Tire Unit may conduct a public information meeting on certain types of license or approval applications.

The Scrap Tire Unit requires property owners to clean up illegally-stockpiled scrap tires. Depending on available revenue, special funds can be used when a landowner fails to cleanup a scrap tire dump. Cost recovery from the landowner or other identifiable responsible party for all costs associated with the cleanup is required, unless the owner qualifies for an inheritance exemption. Corrective orders and penalties may be issued for violations in accordance with MDE's guidelines and procedures.

SUCCESSES/CHALLENGES

In FY19, MDE accomplished its goal to initiate the planning and cleanup process for 100% of illegal scrap tire stockpile sites identified during the year. Approximately 1,116 scrap tires in 12 stockpiles were newly identified in FY19. During FY19, the Scrap Tire Unit continued to oversee the cleanup and recovery of 126,952 scrap tires identified in stockpiles at the end of FY18.

During FY19, the Scrap Tire Program successfully completed cleanup of 21 illegal scrap tire stockpiles, consisting of approximately 7,197 scrap tires. These sites were located in 11 of the state's 24 jurisdictions, and ranged in size from 20 to 3,000 scrap tires. The Scrap Tire Program also initiated the planning and cleanup process for the 12 illegal scrap tire stockpile sites newly identified during FY19. All of the scrap tire stockpile cleanups completed in FY19 were conducted by the responsible party without using the fund.

Since the inception of MDE's scrap tire activities in 1992, over 11 million scrap tires have been recovered from 1,119 stockpile cleanup sites. This has significantly reduced the threat of fires that emit toxic smoke and oils into the air and surface waters, as well

as the threat of mosquito- and other-vector-borne illnesses such as West Nile virus, encephalitis, and Zika virus.

The Scrap Tire Unit continues to face challenges in finding processors for scrap tires. Currently only four scrap tire processors in Maryland accept scrap tires from the public. Of the four processors, only three will accept dirty scrap tires. The tipping fees for dirty scrap tires are significantly higher than those for clean scrap tires. Some of the scrap tire processors in Maryland have waiting lists of two months or more for acceptance of scrap tires from scrap tire haulers. There are processors in neighboring states, but most will not accept dirty scrap tires. The continuing low petroleum prices have negatively affected the tire-derived fuel (scrap tire chips) markets throughout the mid-Atlantic Region. When petroleum prices are lower than tire-derived fuel prices, fewer customers purchase and utilize tire-derived fuel.

Scrap tire inspections are performed by inspectors in SWP. Larger scrap tire facilities are inspected more frequently than smaller ones through routine unannounced inspections. Inspectors also investigate citizen complaints about illegal dumping or handling of scrap tires. SWP's Compliance Division conducted 579 scrap tire site inspections and spot checks at 403 sites in FY19, which is a decrease from the 677 inspections and spot checks at 501 sites performed in FY18.

Enforcement actions decreased from 101 in FY18 to 49 in FY19. Enforcement actions follow an ebb and flow pattern based on the number of violations identified and whether or not the violators return to compliance voluntarily after first notification of the non-compliance. The number of enforcement actions for FY19 generally corresponds with the number of violations identified.

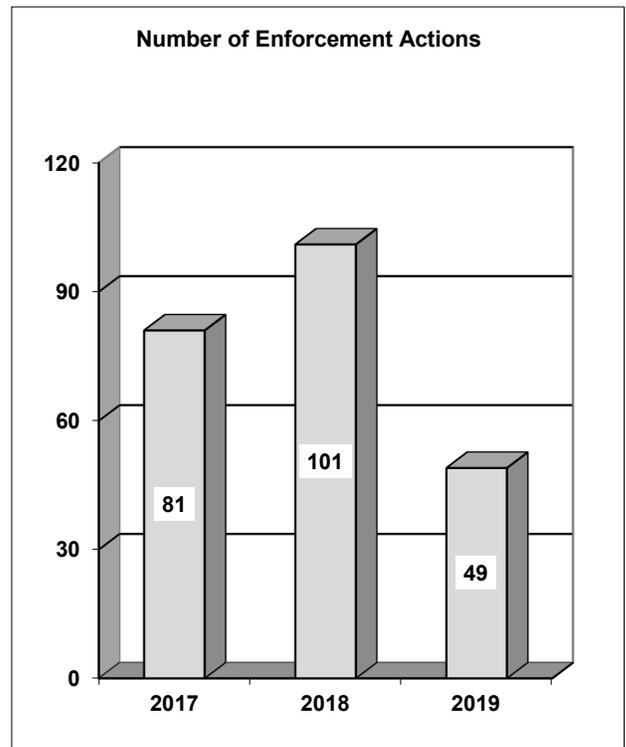

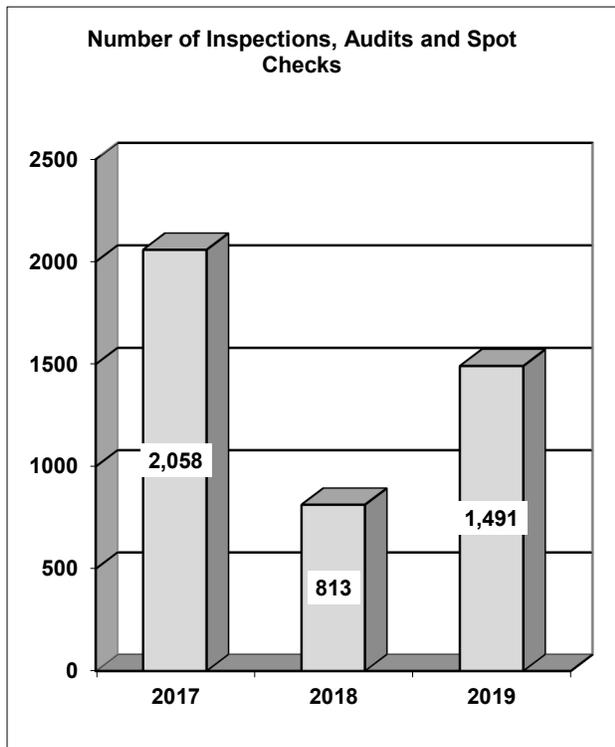

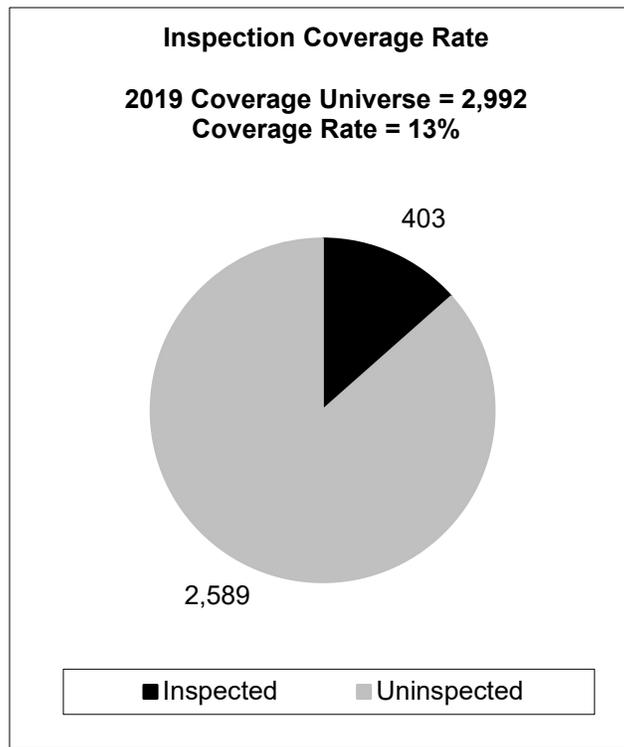

SWP rendered four compliance assistance actions in FY19, and referred one case to the Environmental Crimes Unit in FY19.

Scrap Tires

Sewage Sludge Utilization

PURPOSE

Sewage Sludge (also known as biosolids) is one of the final products of the treatment of sewage at a wastewater treatment plant. A Sewage Sludge Utilization (SSU) permit issued by RMP is required for any activities involving sewage sludge treatment, composting, transportation, storage, distribution, land application, energy generation or incineration, marketing, innovative or research project, disposal, or alternative utilization at a municipal landfill. The purpose of the permits is to ensure that sewage sludge is managed in a manner that is protective of public health and the environment. Sewage sludge is not sewage.

AUTHORITY

STATE: Environment Article, Title 9, Subtitle 2; COMAR 26.04

PROCESS

A person must submit a completed application and the required information for an SSU permit. A person applying for an SSU permit to apply treated sewage sludge on agricultural land must submit a nutrient management plan in accordance with Maryland Department of Agriculture (MDA) requirements. Copies of SSU permit applications are provided to local governments for their review and comment, and depending on the type of activity, an opportunity for a public meeting may be offered.

Sewage sludge composting facilities, pelletizers, and storage facilities are inspected by SWP several times per year. Landfill disposal operations are inspected during the course of routine landfill inspections. Land application sites are inspected when the workload allows or when complaints are received. If required, inspectors may recommend corrective action be taken. If a significant violation is found, a site complaint is issued. Corrective orders and penalties may be issued for violations in accordance with MDE's guidelines and procedures. Inspectors also investigate citizens' complaints about sewage sludge utilization.

SUCCESSSES/CHALLENGES

While the inspection coverage rate for sewage sludge utilization sites remains around 12%, it should be noted that many of these sites are farm fields that may only receive sewage sludge once or twice during a five-year permit life. Inspection efforts are concentrated toward those sites that are active during the year. The number of inspections and spot checks increased from 207 in FY18 to 233 in FY19. The RMP Biosolids Division continues to review reports. In FY19, 1,015 audits were conducted compared to 1,795 in FY18. The RMP Biosolids Division issued five site complaints and one NOV with a penalty of \$5,000 in FY19.

Sewage Sludge Utilization

Animal Feeding Operations

PURPOSE

The Animal Feeding Operations (AFO) Division within RMP regulates discharges from farms with animals that are stabled or confined for 45 days or more in any 12-month period in an area where crops/forage are not grown. AFOs have the potential to discharge nutrients and sediments to surface waters if improperly designed, constructed, operated, or maintained. The permit is a zero-discharge permit, with the goal of eliminating any impact to the environment.

AUTHORITY

FEDERAL: Federal Clean Water Act

STATE: Environment Article, Title 9, Subtitle 3; COMAR 26.08.

PROCESS

AFOs are subject to regulations through registration as a Concentrated Animal Feeding Operation (CAFO) or a Maryland Animal Feeding Operation (MAFO) under a General Discharge Permit (GD Permit). This GD Permit requires these operations to be designed, constructed, operated, and maintained according to specific standards that control or eliminate discharges of pollutants to the waters of the state. All large, and certain medium, AFOs are required to apply for coverage under the GD Permit.

During the five-year duration of the GD Permit, every registered operation will be inspected at least once to ensure compliance with the permit conditions. These conditions incorporate relevant portions of farm-specific required plans, including, but not limited to, a Comprehensive Nutrient Management Plan or a Nutrient Management Plan and Soil Conservation and Water Quality Plan, written in accordance with state and federal requirements. Complaints involving CAFOs or MAFOs are addressed by inspectors specifically assigned to the AFO Compliance Unit. Enforcement is accomplished through site complaints, NOVs, and administrative, civil, and criminal mechanisms.

SUCCESSSES/CHALLENGES

The AFO division provided compliance assistance on 50% of inspected sites, resulting in either no violation or only minor violations. There were no documented or observable discharges to waters of the state. MDE's success in providing customer service has resulted in a 30% overall increase in compliance assistance numbers for FY18 and FY19. The Animal Feeding Operations Division has also inspected 26% of all registered CAFOs, exceeding EPA's requirements by 6%. MDE's AFO Division, along with MDA and the NRCS, have increased technical assistance and public outreach and education efforts, which has also contributed to increased compliance assistance numbers and lower rates of noncompliance.

Enhanced partnership and communication with AFO operators has improved the AFO Division's and MDA's abilities to obtain AFO operator information required for registration, including updated nutrient management plans, conservation plans, and comprehensive nutrient management plans.

Because poultry integrators are reducing the number of AFOs due to larger poultry houses being constructed, MDE anticipates a reduction in the number of AFOs requiring permits in the future. The number of permits in effect increased by 20 (572 in FY19 and 552 in FY18). In FY19, the AFO division issued 74 certificates of registration (permits) compared to 165 in FY18.

The AFO division has increased the numbers of workshops and seminars for the agricultural community, which has brought a greater understanding of AFO requirements, leading to an increase in compliance. Although the number of inspections remained consistent with last year (146 sites), audits conducted by the AFO Division increased to 788 in FY19 from 506 in FY18. A contributing factor to the increase in audits is the number of completed Annual Implementation Reports submitted in a timely manner, which allows staff to perform audits during the current fiscal year rather than falling into the following fiscal year. The number of inspections, audits and spot checks increased in FY19 to 985 from 683 in FY18. MDE believes that the decrease in enforcement actions from 17 in FY18 to 10 in FY19 resulted from increased outreach especially in light of consistent inspections and audits between years.

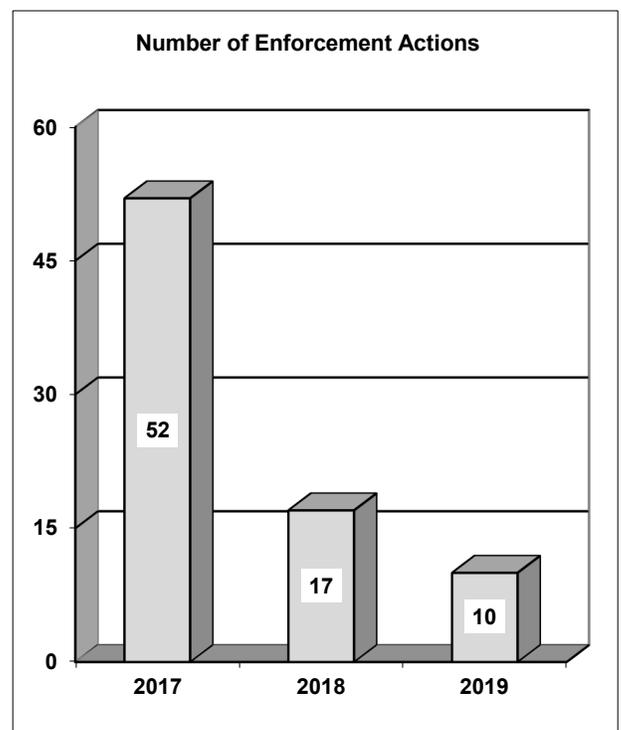

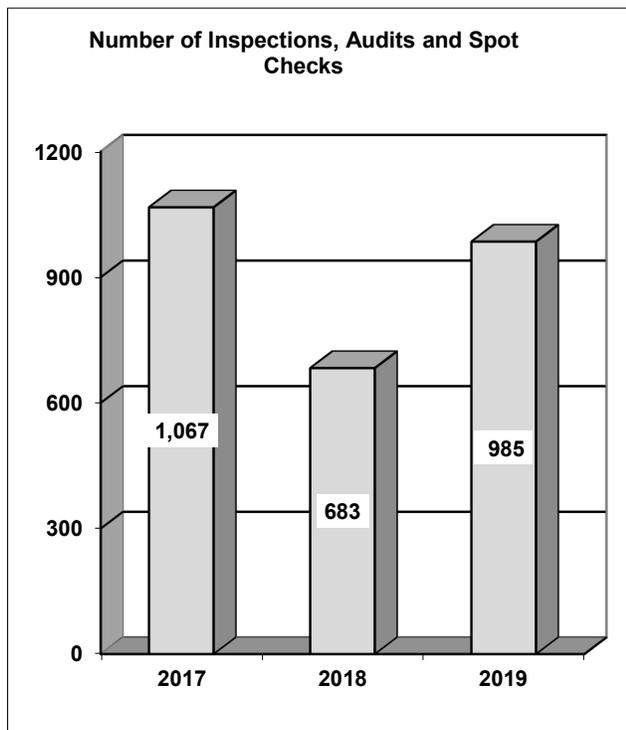

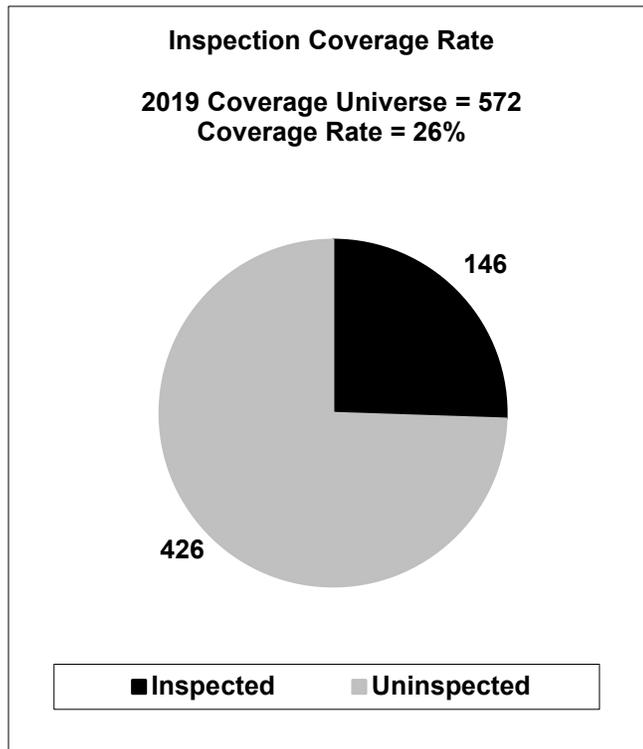

An increase in permit withdrawals has been challenging for the AFO Division and has resulted in the close-out of 24 permitted facilities in FY18 and 27 facilities in FY19. These facility close-outs can be complex. Another continuing challenge for the AFO division is the threat of Avian Influenza. The biosecurity protocols limit inspections of poultry farms to one per day, reducing the number of inspections that can be conducted each week.

Animal Feeding Operations

Natural Wood Waste Recycling

PURPOSE

SWP issues Natural Wood Waste (NWW) Recycling permits to ensure that NWW is managed in a manner that will not cause harm to the public health and the environment. Recycling is conducted by chipping the wood waste (stumps, root mat, branches, logs, and brush) and converting it into products, including mulch and compost. The permitting system was designed to prevent large-scale fires at NWW facilities.

Natural wood waste facilities were targeted for additional inspections in FY03 and FY04 after several severe fires at this type of facility in FY02.

AUTHORITY

STATE: Environment Article, Title 9, Subtitle 17; COMAR 26.04.

PROCESS

Permits are required for the operation of facilities that recycle NWW (stumps, root mat, branches, logs, and brush). NWW activities are authorized by either a general permit or an individual permit. Permits are not required for these kinds of operations at landfills, if the activities are performed by an individual or business recycling its own wood wastes on its own premises, or for wood waste recycling operations performed by a government or nonprofit agency. Routine unannounced inspections are performed at these facilities several times a year to ensure compliance with the permit, as well as investigating citizen complaints. If violations are found, corrective actions are required in accordance with MDE's guidelines and procedures.

SUCSESSES/CHALLENGES

This year, SWP saw only four site complaints, even with increased inspections. The program inspected 46 sites in FY19, an increase from 41 in FY18. The total number of inspections, audits and spot checks decreased slightly from 204 in FY18 to 201 in FY19. SWP issued four site complaints in FY19, a decrease from 10 in FY18. In addition, staff conducted six compliance assistance actions in FY19.

Natural Wood Waste Recycling

Mining – Coal

PURPOSE

Federal law requires that a person obtain a permit in accordance with the federal Surface Mining Control and Reclamation Act (SMCRA) to mine coal anywhere in the United States. The purpose of the act was to establish a nationwide program to protect the public and the environment from the adverse effects of surface coal mining operations. In Maryland, MDE is authorized by the federal Office of Surface Mining to administer a surface mining control program consistent with the federal law. The Bureau of Mines (BOM) Division is responsible for processing, reviewing, and issuing all permits and enforcing all laws and regulations enacted by the state related to coal mine operations. These operations include extraction of coal by surface or underground mining methods, processing, and loading coal after extraction, recovering coal from refuse piles left by previous coal mining operations, and prospecting for coal. The Abandoned Mine Land Division uses funds available through Title IV of SMCRA, the EPA, and various state funds to eliminate health, safety, and environmental issues caused by coal mines that were inadequately reclaimed and abandoned prior to the date of the federal law (Aug. 3, 1977). The Abandoned Mine Lands Division maintains 11 active and 44 passive systems to improve and maintain water quality in more than 115 miles of western Maryland streams, many of which support viable fishery populations.

AUTHORITY

FEDERAL: P.L. 95-87 SMCRA of 1977

STATE: Environment Article, Title 15, Subtitle 1 through 11; COMAR 26.20

PROCESS

A person wanting to obtain a coal mining operations permit must file an application that includes maps, plans, and designs detailing how the operation is to be conducted and evaluations of potential environmental impacts that could result from the operations. BOM reviews the designs and environmental evaluations, and solicits comments on the proposed operations from the general public through public notifications and from government agencies through direct notification. If BOM finds the application is in compliance with program requirements, a permit will be issued. The applicant is required to post a bond sufficient to assure reclamation of the site.

Permitted operations are inspected, at a minimum, 12 times per year for compliance with the plans that are approved as part of the permit, conditions of the permit, and state coal mining laws and regulations. Permitted operations are also required to submit on a regular basis monitoring data for surface and ground water quality, data related to blasting, coal production, and progress reports relating to reclamation of the sites. This submitted data is reviewed for regulatory compliance.

Coal mining operations are required to reclaim the land to a condition similar to what existed prior to mining. Areas disturbed by the operations must be regraded to a similar shape and contour as existed pre-mining and vegetated with diverse permanent species

of plants that will stabilize the soil, prevent erosion, and support the intended post-mining use of the land. The bond posted for the permit will not be released for five years following completion of the mining operations, during which time the site will continue to be inspected and reclamation success evaluations will be performed by BOM and the Maryland Land Reclamation Committee (LRC). The LRC is a group established by law comprised of government, industry, and private citizen representatives who, among other duties, are charged with evaluating the success of reclamation on individual surface mine permits and without whose approval the bond cannot be released.

In addition, the Abandoned Mine Lands Division carries out the reclamation of pre-law areas mined prior to 1977 that were not adequately reclaimed. These reclamation activities improve the quality of the environment, increase the beneficial use of the land and water resources, and eliminate any dangers to public health and safety. Projects are selected from an inventory of documented sites developed by the Abandoned Mine Lands Division and approved by the Federal Office of Surface Mining.

SUCCESSSES/CHALLENGES

The mining program met 100% of all legally-mandated inspection frequencies in FY19. State capital funds were used to coordinate with Allegany County on the design of the Upper George's Creek Shaft Restoration project. Design is underway with construction scheduled to start FY20.

The mining program installed a series of limestone sand filters and leach beds in the Casselman River in FY16. Results of this project became evident in FY18 with the Department of Natural Resources reporting a significant increase in the population of naturally-occurring brook trout in several tributaries of the mainstream where trout have not been recorded in previous years. In response to the documented improvements, four more sand dumps were installed in FY19, bringing the improved stream miles to 115.

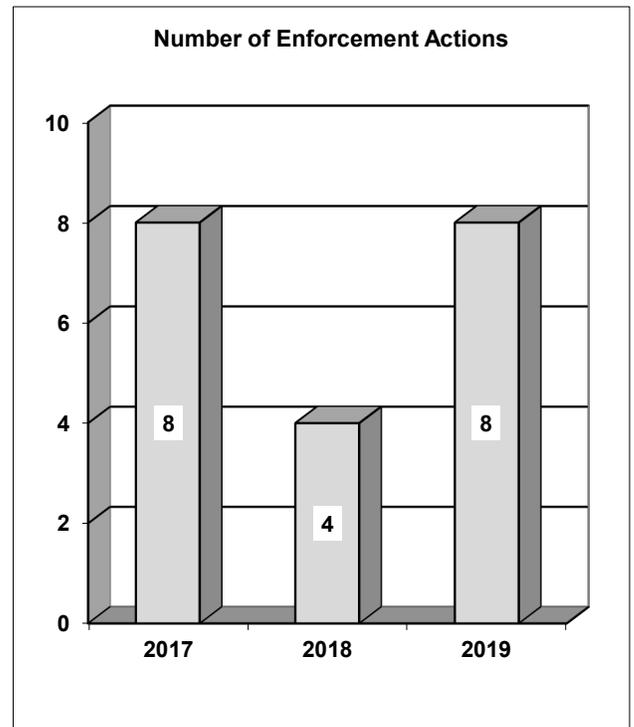

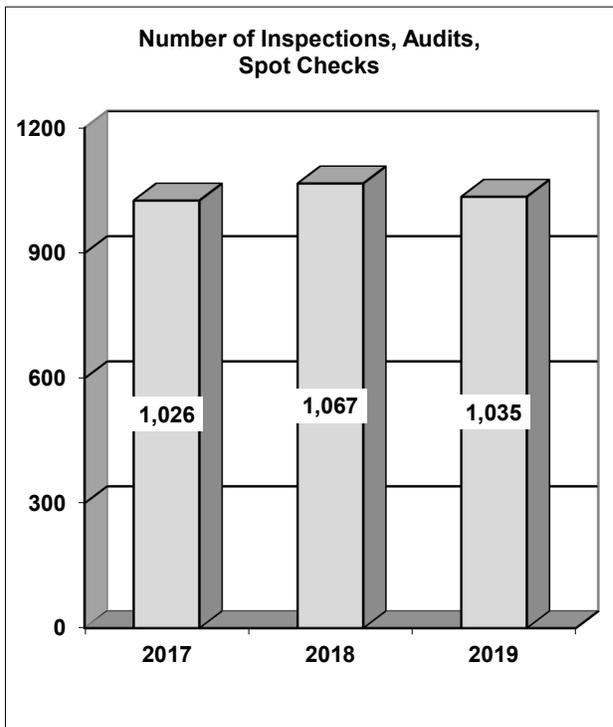

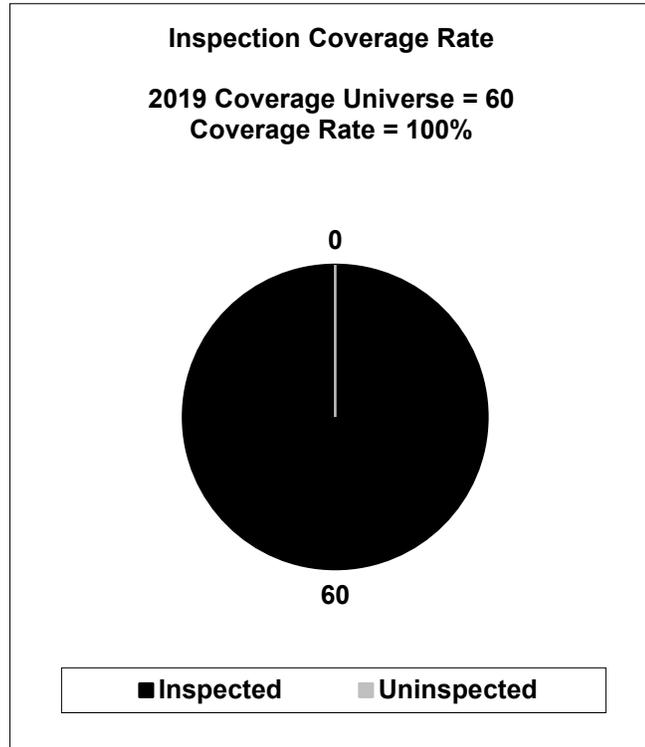

The program responded to and repaired a significant landslide that threatened to cut off the Town of Shallmar. Funding for emergency response and staff time for design and oversight will be a priority in FY20.

BOM oversees the compliance of 52 inspectable units under Maryland's federally-approved coal mining regulatory program. BOM reviews, monitors, and adjusts the reclamation liability of all active permitted mine sites to ensure that the posted bond is sufficient to fully reclaim the sites, should an operator vacate a site without adequately reclaiming the land. A challenge will be to closely monitor all active mine sites to maintain concurrent reclamation.

Mining – Coal

Mining – Non-Coal

PURPOSE

The extraction of minerals is a basic and essential activity for the economic wellbeing of the state and nation. This activity must be balanced against potential safety and environmental effects. The mining permit review evaluates possible impacts on surrounding properties, the local environment, and the public safety of the operation. Other impacts such as historical resources and habitat protection are reviewed as well. Each site is bonded to ensure compliance with the permit.

AUTHORITY

STATE: Environment Article – Title 15, Subtitle 8; COMAR 26.21

PROCESS

Upon issuance of a permit, the site is assigned an inspection frequency. This frequency can be adjusted at any time based on site conditions and workload. All water quality permits, wetland, waterway and sediment approvals are inspected as part of the mine permit inspection.

MDE does not have statutory authority to collect administrative penalties for non-coal mining permits, but violations of other media associated with mining may be penalized as warranted. Laws do provide for civil and criminal penalties.

Improperly maintained environmental controls have the potential to degrade water quality through the transport of sediment-laden water from drainage and stormwater runoff, and can adversely impact the aquatic habitat. The program evaluates mining practices, reclamation, and stormwater management for compliance to ensure that adverse impacts to surface and groundwater are minimized.

SUCCESSSES/CHALLENGES

The mining program inspected 100% of all legally-mandated inspection sites in FY19. Inspections are multi-media and include wetland and floodplain impacts, sediment control and National Pollutant Discharge Elimination System (NPDES) permits. Adjacent support sites such as asphalt plants and concrete plants are included in the inspection as well. There are nine adjacent plants with NPDES permits, which are required to be inspected.

MDE has worked closely with mine operators and surrounding communities to reduce the impacts of the mine sites to the communities. Mud tracking from mine sites onto community roadways continues to be a frequent issue that impacts communities. Increased inspections at persistent problem sites and imposed penalties have resulted in improved conditions. Implementation of preventive measures has increased, including installation of wheel washes, which have resulted in reduced impacts. MDE typically responds to complaints within 24 hours.

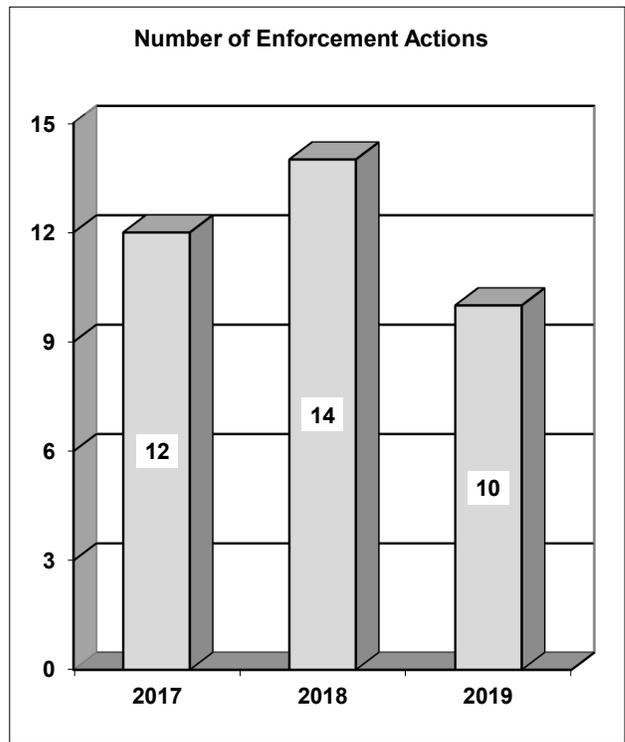

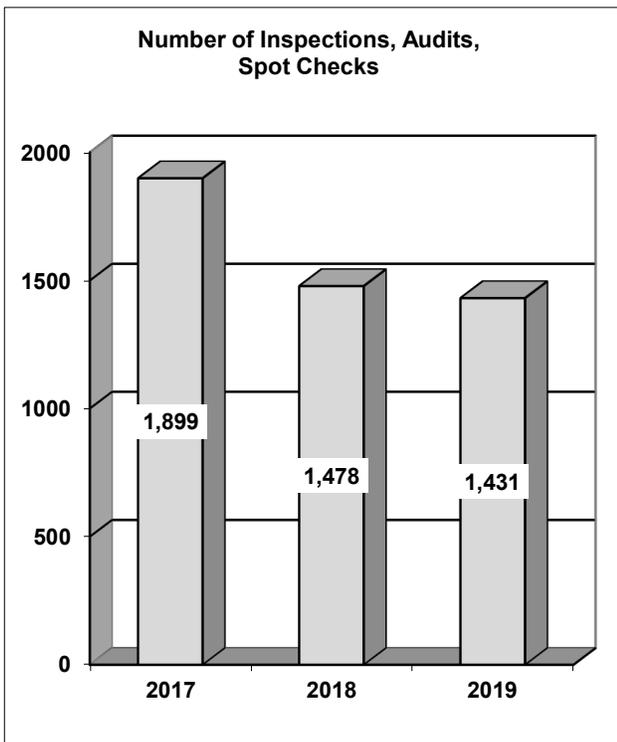

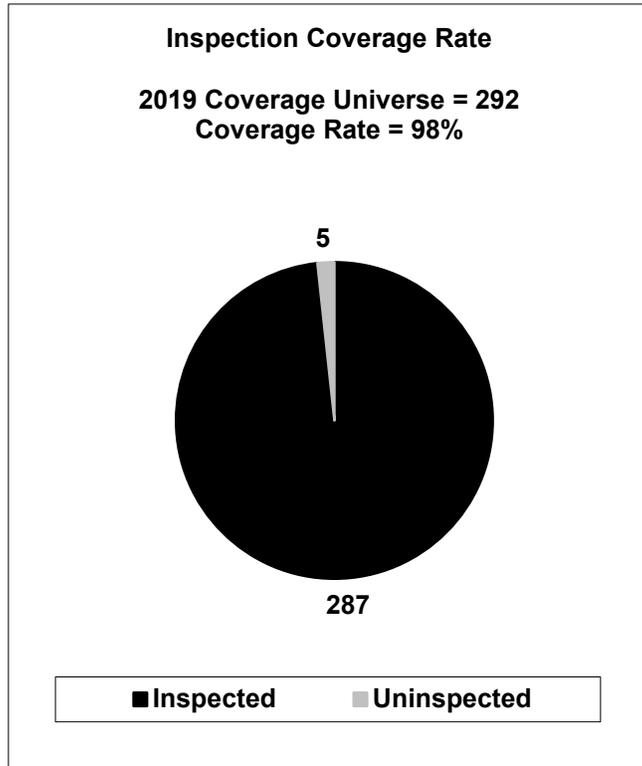

The program has restructured its annual license renewal process to eliminate redundant information and streamline the process, saving time and eliminating unnecessary paper.

Mining – Non-Coal

Oil and Gas Exploration and Production

PURPOSE

In the State of Maryland, drilling and operations of gas or oil wells, operations of a natural gas storage facilities and oil and natural gas exploration using seismic operations require a permit. Permits include environmental controls to ensure public safety, provide protection of public and private property, and minimize impacts resulting from the operation. Hydraulic fracturing is not allowed in the State of Maryland.

AUTHORITY

STATE: Environment Article - Title 14, Subtitles 1, 2 and 3; COMAR 26.19.

PROCESS

Sites are assigned an inspection frequency during issuance of a permit, license, or authorization. Routine inspections of the facilities are scheduled in accordance with the assigned priorities and may be adjusted to reflect changes in workloads or inspection priorities. The inspector assesses compliance with permit conditions and determines if corrective action may be required. During active drilling operations, the frequency of inspection is higher compared to when a well is completed.

SUCCESSSES/CHALLENGES

In FY19, the mining program completed 100% of all legally-required inspections at active gas wells and storage wells in the State of Maryland. Gas wells and storage wells are to be inspected once every five years.

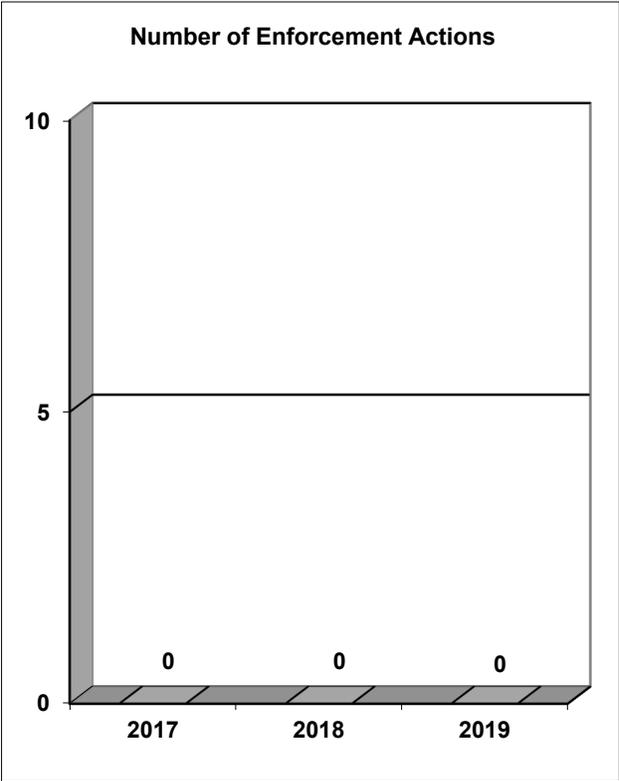

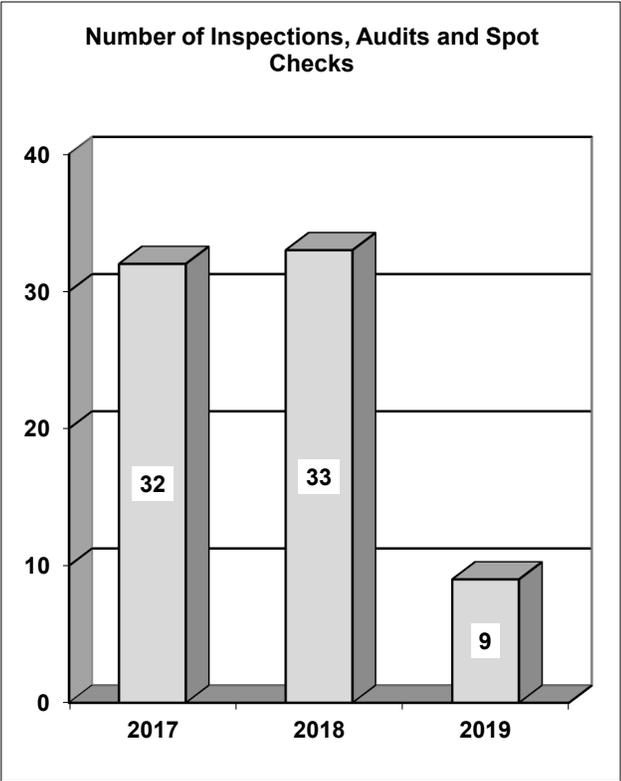

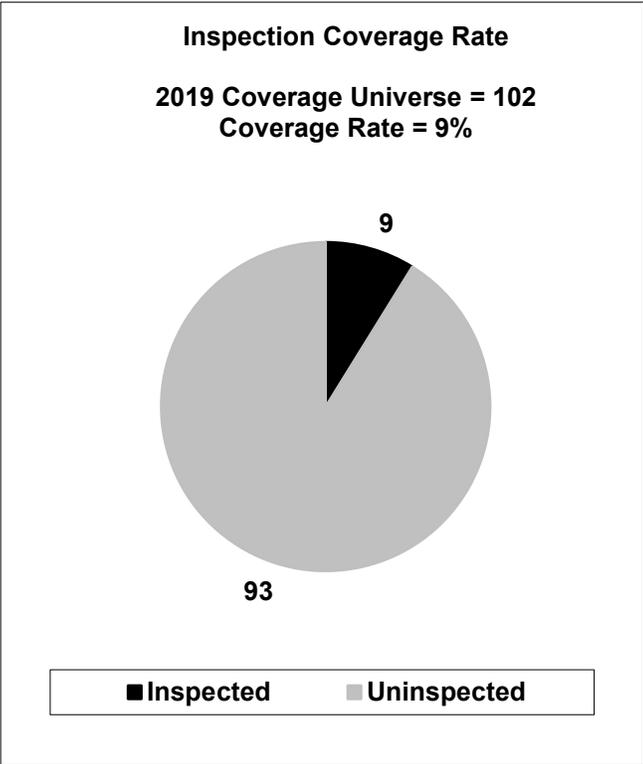

No significant violations occurred at any of Maryland's gas storage wells in FY19. Also, there were no new applications for drilling and operating permits. Existing storage wells will continue to be in use and will be inspected for structural integrity, environmental impacts, and public safety. During FY19, no violations occurred at any of the existing natural gas storage wells. There are no gas production wells developed using high-volume hydraulic fracturing in Maryland. During FY19, one active well was taken out of service and plugged.

Oil and Gas Exploration and Production

Electronics Recycling

PURPOSE

The Maryland Statewide Electronics Recycling Program (MSERP) promotes and requires electronics recycling by regulating manufacturers and retailers of Covered Electronic Devices (CEDs). A CED is a computer or video display device with a screen that is greater than four inches measured diagonally. This includes computers, computer monitors, televisions, portable DVD players, cell phones, tablets, etc. A CED does not include a video display device that is part of a motor vehicle or that is contained within a household appliance or commercial, industrial, or medical equipment. Manufacturers of CEDs that intend to sell these devices in Maryland are required to register with MDE and pay a registration fee. The fee, which is paid annually, is based on the number of CEDs the manufacturer sold in Maryland during the previous year, as well as whether the manufacturer has a department-approved CED takeback program. To qualify, the takeback program must meet certain requirements, such as provision of a free method for consumers to return the manufacturer's CEDs for recycling and a method for consumers to remove personal data from CEDs prior to return for recycling (if applicable). Both manufacturers and retailers are prohibited from selling or offering for sale CEDs in the state unless the manufacturer of those CEDs is registered with MDE.

AUTHORITY

STATE: Environment Article, Title 9, Subtitle 17.

PROCESS

Each manufacturer of a qualifying CED must complete and submit a registration form with the proper accompanying registration fee to MDE by the annual submission deadline of March 1. MDE tracks registrations and payments submitted by manufacturers of CEDs. The annual registration is valid until the last day of February of the following year (e.g., registrations due March 1, 2018, are valid until February 28, 2019).

The annual registration fee is determined based upon the number of CEDs sold by a manufacturer in Maryland the previous year (e.g., the 2017 registration fee is based upon 2016 sales) and whether or not the manufacturer has a department approved CED takeback program. Industry sales data, purchased by MDE, is used to verify the quantity of CEDs sold and reported to MDE by each manufacturer via the annual registration form. MDE also reviews and approves or denies manufacturer takeback programs.

A list of registered manufacturers is generated and posted on MDE's website. The listings for manufacturers with an approved takeback program are hyperlinked and/or are accompanied with a toll-free phone number to be used by customers to obtain details on a manufacturer's takeback program.

MDE inspects CED manufacturer web pages, brick-and-mortar stores, and web-based retailers to determine manufacturer compliance with the MSERP.

SUCSESSES/CHALLENGES

In FY19, 60% of manufacturers registered by the March deadline. In FY19, MDE renewed the purchase of national electronic manufacturer sales information, which allows a faster and more accurate review of manufacturer registration forms and verification of fees owed.

Because manufacturer registrations are issued throughout the year and a fiscal year (July – June) spans two registration years (March – February), the number of registrations issued during a fiscal year may vary from the number that are in effect at the end of that fiscal year. This explains why 134 annual registrations were issued during FY19 and 121 were in effect as of the end of that fiscal year.

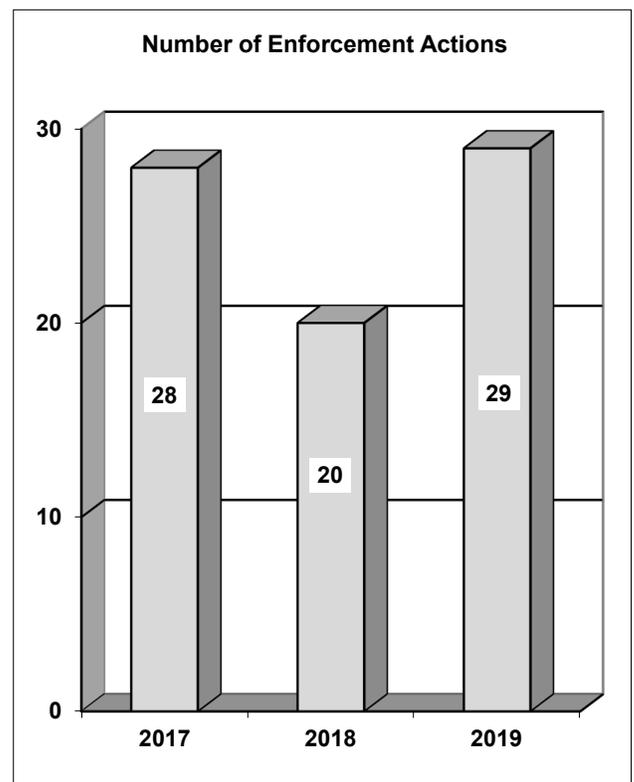

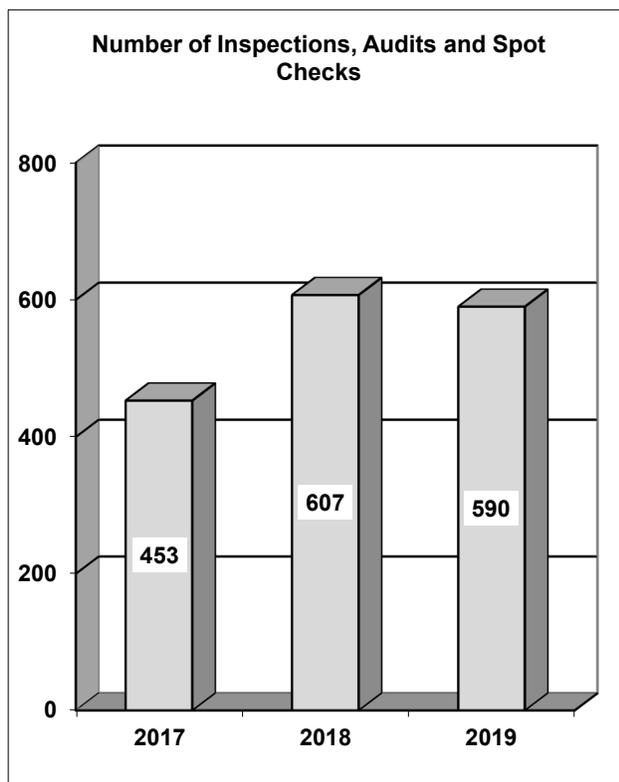

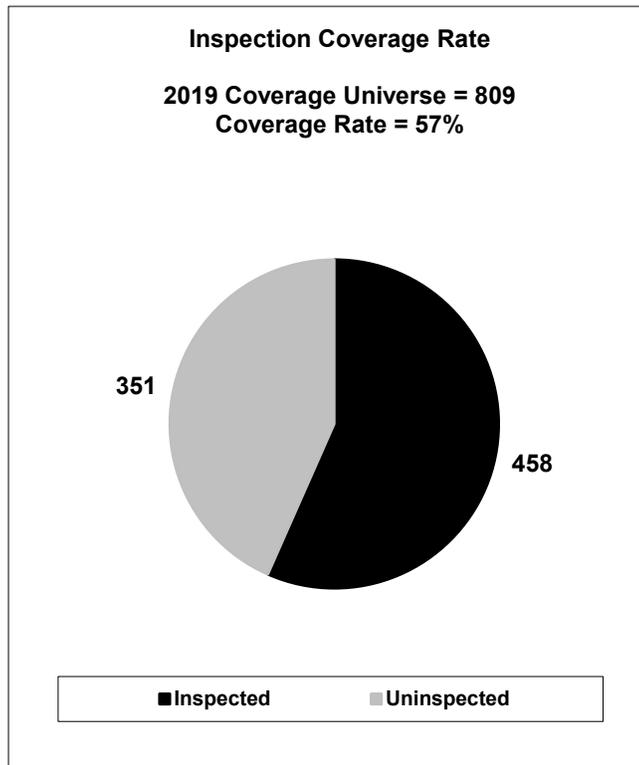

In FY19, 99% of brick-and-mortar electronic retailers inspected were in compliance with the MSERP. MDE inspected 458 sites in FY19, which was a slight decrease from 463 in FY18.

WATER AND SCIENCE ADMINISTRATION

Water and Science Administration

Executive Summary

The Water and Science Administration (WSA) has compliance and enforcement responsibilities for the water quality and resource conservation programs that follow in this report. The compliance program is responsible for compliance associated with state groundwater discharges, federal and state surface water discharges, pretreatment, erosion and sediment control for construction activity, waterway construction, and tidal and non-tidal wetlands. The Water Supply Program (WSP) is responsible for public drinking water and water appropriation and use permit compliance, and the Sediment, Stormwater and Dam Safety Program (SSDSP) is responsible for dam safety compliance.

SSDSP is responsible for administering Maryland's Dam Safety Division. In past years, a significant compliance concern has been that many of Maryland's high- and significant-hazard dams lacked current Emergency Action Plans (EAPs), which are critical for storm preparedness and public safety. In 2017, the state enacted new legislation requiring that owners of high- and significant-hazard dams submit updated EAPs by May 1 of each year, and participate in a functional exercise of the EAP once every five years. The division participated in or facilitated exercises for 26 dams in six counties. The division also organized an educational workshop for dam owners in October 2018; nearly 200 people attended. Finally, the division assisted with the removal of two unsafe significant-hazard dams in FY19.

In FY19, Maryland continued implementation and enforcement of the Safe Drinking Water Act for all public water systems (PWSs) in accordance with the most recent primacy MDE has received. To assist PWSs with meeting compliance requirements, WSP provided training and on-site technical assistance.

MDE continues to dedicate significant resources to reducing exposure to lead in drinking water, both in schools and in community water systems. In FY19, the Water Supply Program (WSP) continued to implement the "Testing for Lead in Drinking Water - Public and Nonpublic Schools" regulation for Maryland's 3,000 schools. MDE acquired software to track the lead-in-drinking-water sampling data, school inventory information, deferrals, waivers, public notification, and remedial actions, which is shared with other state and local agencies; direct electronic reporting of lead sample results is now available to schools. In 2019, a web-based public interface of the lead-in-schools sampling data, including a GIS map display, is expected to be completed. MDE has applied for federal grant funding to expand the lead testing to include day care centers. WSP met with MSDE and provided comments on the application and procedures guide for the Healthy School Facility Fund, which was expanded in 2019 to include lead in drinking water as a priority for funding. WSP has also provided updates on school lead testing to the governor's Lead Poisoning Prevention Commission and continues to provide biweekly updates of the progress of school lead testing on MDE's web page. Members of the WSP have participated in workgroups to address lead in drinking water in schools, including the Montgomery County Public School System's Water Safety Workgroup.

During FY19, WSP worked with permittees with Water Appropriation and Use Permits to bring them into compliance. Larger public water systems conduct water audits and submit water loss plans to reduce waste. Reviews of the audits showed that many systems need to devote additional resources into reducing water leaks. NOVs were sent to permit holders with outstanding reporting requirements, expired permits, and those who used water in excess of their permitted allocation.

WSA's Compliance Program is responsible for compliance monitoring, including inspections and audits, compliance assurance, and enforcement of permit and regulatory requirements for groundwater discharges, surface water discharges, erosion and sediment control, waterway construction, nontidal wetlands, and tidal wetlands. The Compliance Program prioritizes sites across all of these media in order to effectively use its resources to assure compliance with applicable laws, regulations, and permit conditions at the most important sites. When significant noncompliance is found, the program works to return sites to compliance in an expeditious manner. In some cases the actions necessary to achieve compliance require long-term projects or monitoring under enforceable compliance schedules.

WSA's Compliance Program is utilizing self-reported monitoring data from permittees to address potential compliance issues before they become enforcement cases. In FY19, program staff performed a pilot project to address missing data from discharge monitoring reports. This involved 18 major discharge facilities. These were addressed with auto-generated letters detailing the missing data, which resulted in many of the facilities updating the reports and resolving the issues. The program is investigating the capability to scale up this effort and issue the letters more quickly to resolve reporting errors before they meet EPA's significant noncompliance threshold.

Discharges – Groundwater (Municipal & Industrial)

PURPOSE

Groundwater discharge permits establish pollutant discharge limits and require the permit holder to meet self-monitoring, record-keeping, and reporting requirements to protect public health and minimize groundwater pollution. Excessive nutrients, bacteria, and industrial pollutants in wastewater have the potential to impact the quality of groundwater. The groundwater discharge permitting process provides a means of managing these impacts through monitoring, inspection and enforcement. The Wastewater Permits Program issues groundwater discharge permits to control the disposal of treated municipal or industrial wastewater into the state's groundwater via spray irrigation or other land-treatment methods such as subsurface discharge. Upon permit issuance, the Compliance Program is responsible for inspections and compliance assurance.

AUTHORITY

STATE: Environment Article, Title 9, Subtitle 3; COMAR 26.08

PROCESS

The Compliance Program performs inspections of sites with groundwater discharge permits as part of its overall inspection priority scheme, with priority given to sites that are the subject of complaints or are in violation based on failure to perform required self-monitoring and reporting, or due to violations of the effluent limitations in the permit. The inspector may conduct unannounced inspections and may collect samples for independent laboratory analysis as necessary to verify compliance with permit limits. Self-monitoring results are filed at the frequency specified by the permit (usually monthly or quarterly) in the form of Discharge Monitoring Reports (DMRs). DMRs are reviewed in the office, including queries of electronic data in the Integrated Compliance Information System to identify violations, and during inspections at the facilities in order to determine whether the facility is in compliance with applicable requirements. DMR reviews are shown in the following table on the line identified as "Inspections, Audits, Spot Checks." DMR reviews are not included in the determination of the inspection coverage rate.

SUCSESSES/CHALLENGES

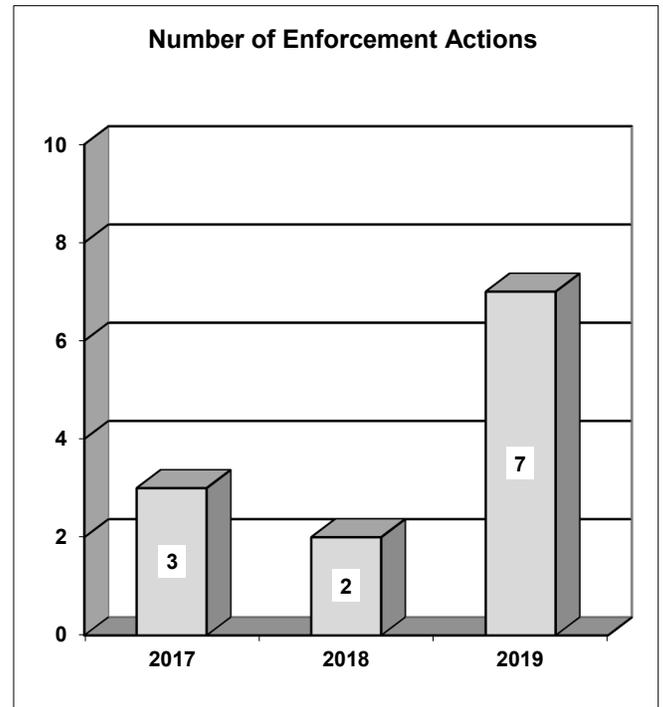

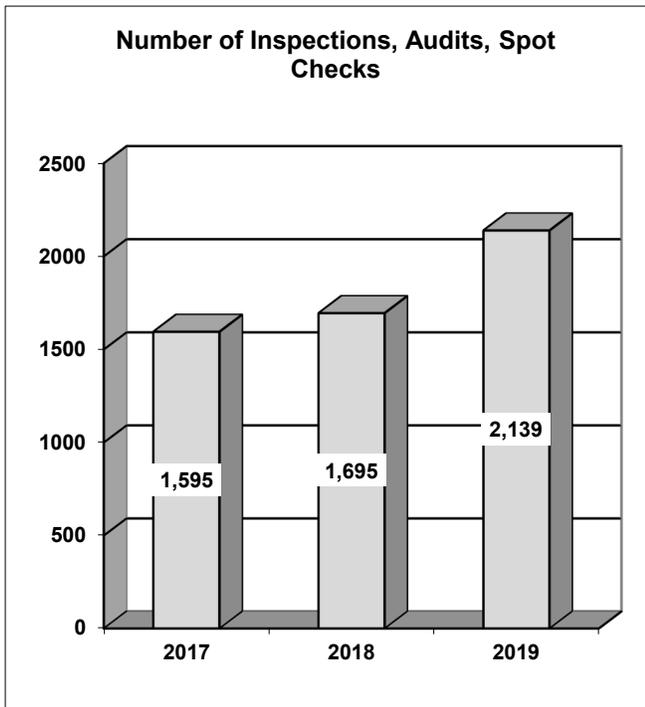

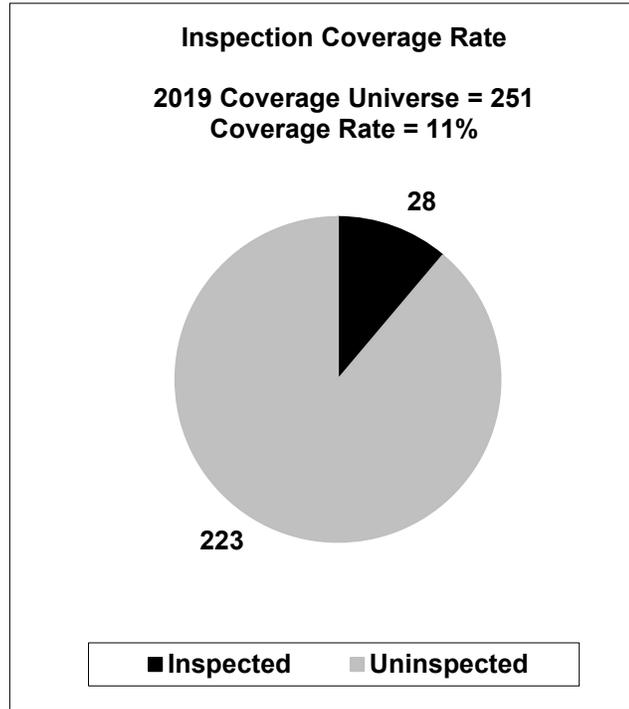

The program evaluated compliance for 65% (163) of the groundwater discharge sites and found 12 instances of significant noncompliance, equating to a compliance rate of 93%. The program will continue to work to maintain the high rate of compliance in this area.

This page intentionally left blank.

Discharges – Groundwater (Municipal and Industrial)

Discharges - Surface Water (Municipal & Industrial) State and NPDES Permits

PURPOSE

The federal Clean Water Act's NPDES Program controls water pollution generated from a wide variety of sources, including industrial activities, sewage treatment plants, certain agricultural activities and stormwater runoff from industrial, municipal and agricultural sources. All industrial, commercial or institutional facilities that discharge wastewater, including stormwater from certain industrial facilities, directly to surface waters of Maryland need a permit. Permit holders include local, state, and federal government agencies, as well as privately-owned treatment systems.

The NPDES permit system includes a stormwater component to control pollution generated from runoff associated with certain industrial sites, municipal storm sewer systems, construction activities, and concentrated animal feeding operations. Eleven categories of industry, and storm sewer systems operated by certain government agencies, are required under the Clean Water Act to have their stormwater discharges covered under an NPDES permit. For any construction activity that disturbs one or more acres, coverage must be obtained under MDE's general and individual NPDES permits for construction activity. These permits require developers to perform self-inspection and record-keeping to ensure that sediment and erosion control measures are maintained and functioning in accordance with approved plans to prevent water pollution and stream bank erosion caused by excess erosion, siltation, and stormwater flows from construction sites.

Surface water discharge permits may combine all applicable state and NPDES requirements into one permit for facilities that discharge to surface waters. The permit is designed to protect water quality in the water receiving the discharge.

AUTHORITY

FEDERAL: Clean Water Act

STATE: Environment Article, Title 9, Subtitle 3; COMAR 26.08

PROCESS

The Compliance Program performs inspections of sites with surface water discharge permits as part of its overall inspection priority scheme, with priority given to sites that are the subject of complaints or in violation based on failure to perform permit required self-monitoring and reporting or due to violations of the effluent limitations in the permit. The inspector may conduct unannounced inspections and may collect samples for independent laboratory analysis as necessary to verify compliance with permit limits. Self-monitoring results are filed at the frequency specified by the permit (usually monthly or quarterly) in the form of DMRs. EPA regulations require all DMRs to be submitted by the regulated entities via an electronic system. Maryland uses the NetDMR system for this purpose, and the DMRs permittees submit through NetDMR are passed electronically to EPA's Integrated Compliance Information System (ICIS). DMRs are reviewed in the office, including queries of ICIS to identify violations, and during inspections at the facilities in order to determine whether the criteria for "Significant Noncompliance" have been met. DMR reviews performed by the

Compliance Program's Enforcement Division are included in the following Table on the line identified as "Inspections, Audits, Spot Checks." DMRs were reviewed for all permitted sites that require DMR submittals as a part of their permit.

SUCSESSES/CHALLENGES

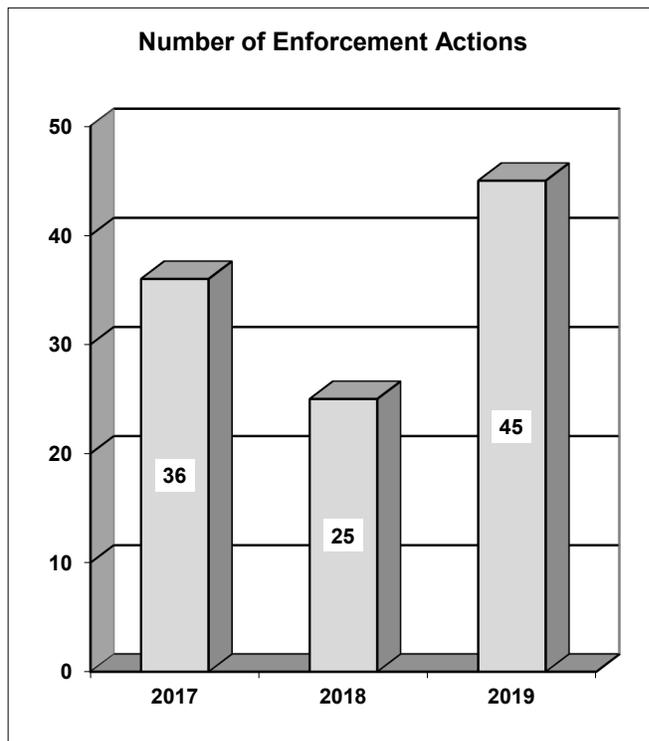

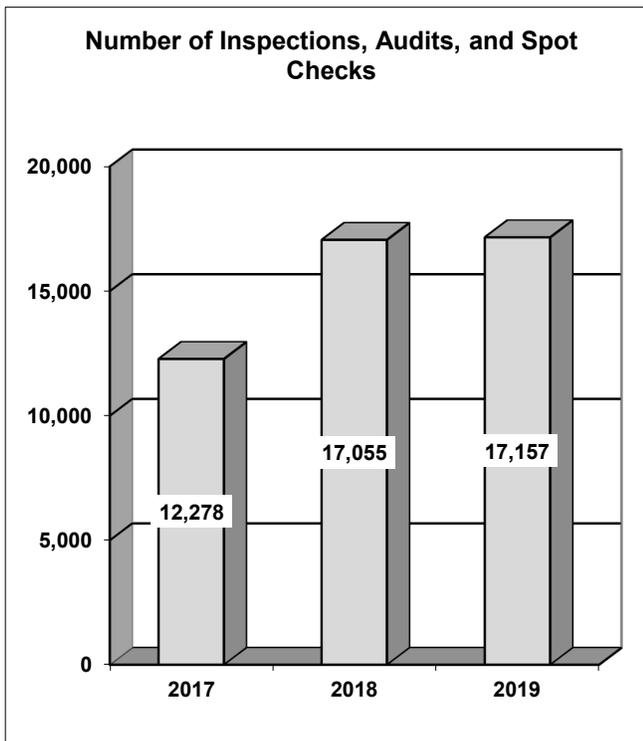

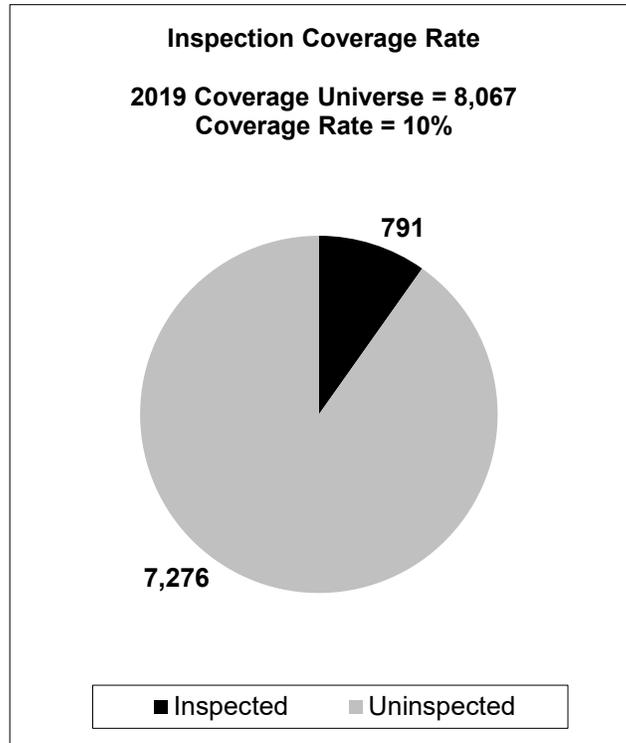

The Compliance Program evaluated compliance for 23% (1,885) of the surface water discharge sites and found 49 instances of significant noncompliance, equating to a compliance rate of 97%. The program will continue to work to maintain the high rate of compliance in this area.

* This number includes new permits, renewals, and conversions/modifications of permits.

Discharges – Surface Water (Municipal & Industrial) State and NPDES Permits

Discharges – Pretreatment (Industrial)

PURPOSE

The Pretreatment Program is responsible for regulating wastewaters from industrial and other non-domestic sources discharged into publicly-owned treatment works (POTW). The Pretreatment Program seeks to prevent the discharge of toxic or corrosive discharges to the collection systems serving POTWs that may result in process upsets and failure of critical infrastructure. In accordance with its authority as delegated by EPA, MDE oversees 20 local pretreatment programs that are responsible for 180 industrial sources. In addition, pretreatment permits are issued directly to five industries discharging to non-delegated POTWs. Local pretreatment program responsibilities include issuing discharge permits to industrial users, conducting industrial inspections and performing compliance monitoring, developing and enforcing local limits, enforcing federal pretreatment standards, and assessing penalties against industrial users. These requirements are included in a delegation agreement, which is signed by the operator of the POTW and WSA, and incorporated by reference into the NPDES permit issued by WSA. Local governments are responsible for issuing penalties and enforcement actions associated with this program; therefore, those numbers are not reflected in WSA's enforcement statistics.

AUTHORITY

FEDERAL: Clean Water Act

STATE: Environment Article, Title 9, Subtitle 3; COMAR 26.08

PROCESS

The Pretreatment Program oversees local pretreatment program implementation. This oversight is performed by the permitting program staff by conducting pretreatment compliance inspections of pretreatment programs; audits of pretreatment programs; joint review of industrial user permits; independent and joint industrial inspections with the POTW; review of quarterly status reports from the delegated POTWs; and initiation of enforcement actions when the POTW fails to act in accordance with its delegated responsibilities. The Pretreatment Program also issues permits to categorical industrial users discharging to wastewater treatment plants in areas of the state without delegated pretreatment programs. Compliance of these industrial users is tracked by review of periodic compliance reports and the results of annual inspections.

WSA oversees delegated pretreatment programs and takes enforcement action when needed to support the proper treatment of industrial discharges to wastewater collection and treatment systems to prevent damage to the treatment processes or infrastructure and pass through of pollutants to waters of the state.

The Pretreatment Program currently issues permits to categorical industrial users located in areas not serviced by jurisdictions with delegated pretreatment programs. In addition, it provides oversight to 20 delegated pretreatment programs with technical and regulatory assistance. The Pretreatment Program also performs inspections at several industrial users that are permitted by local delegated pretreatment programs. The inspection coverage rate includes these industrial users as well as the entities directly permitted by WSA.

SUCSESSES/CHALLENGES

The program is responsible for inspecting the permittees, the POTWs and only some of the industrial users permitted by the delegated POTWs.

* These are state-permitted industries subject to Categorical Pretreatment Standards under U.S. EPA regulations 40 CFR 403.6 and 40 CFR Chapter I, Subpart N.

** Coverage rate is defined as the number of sites inspected divided by the sum of permits/licenses in effect, the POTWs and the significant industrial users.

Discharge – Pretreatment (Industrial)

Stormwater Management and Erosion & Sediment Control for Construction Activity

PURPOSE

The purpose of the erosion and sediment control program is to lessen the impact to the aquatic environment caused by sediment leaving construction sites. The purpose of the stormwater management program is to reduce stream channel erosion, pollution, siltation, and local flooding caused by land use changes associated with urbanization, by maintaining, after development, the pre-development runoff conditions. Any construction activity in Maryland that disturbs 5,000 square feet or more of land or results in 100 cubic yards or more of earth movement must have approved erosion and sediment control and stormwater management plans before construction begins.

AUTHORITY

FEDERAL: Clean Water Act, Section 402; 40 CFR

STATE: Environment Article, Title 4, Subtitle 1 and Subtitle 2; COMAR 26.17

PROCESS

Inspection and enforcement authority for erosion and sediment control has been delegated or partially delegated to 13 counties, and eight municipalities and the Washington Suburban Sanitary Commission by the state. MDE inspections cover construction projects in non-delegated counties and state and federal projects. This report does not reflect the erosion and sediment control inspection and enforcement activities conducted by local governments in delegated jurisdictions.

Stormwater management approval for all non-state and non-federal projects is, by law, the responsibility of each local jurisdiction. MDE inspections of stormwater management facilities are performed for state and federal projects only. Upon issuance of a permit or authorization [whether by WSA's Sediment, SSDSP or by the local sediment control approval authority], a project file is transferred to the Compliance Program where an inspection priority is assigned. Routine inspections are scheduled based on the assigned priority and as workload allows. Facilities are not given advance notification of routine inspections. At any time during the process, the inspection frequency can be adjusted as site conditions or workload demand.

Stormwater and Erosion and Sediment Control are combined into one table because at the state level these projects are reviewed and approved as one project. For state and federal projects, plan review is performed by SSDSP and inspections are performed by the Compliance Program. All other projects are reviewed at the local level, and if delegated, inspected at the local level. In non-delegated jurisdictions, the MDE Compliance Program performs sediment control inspections.

Inspections performed related to an NPDES permit for the discharge of stormwater associated with construction activities are included in the table for surface water discharges.

SUCSESSES/CHALLENGES

The Compliance Program evaluated 670 of the sites regulated for stormwater management, and erosion and sediment control associated with construction activity, and found 12 instances of significant noncompliance, equating to a compliance rate of 98%. The program will continue to work to maintain the high rate of compliance in this area.

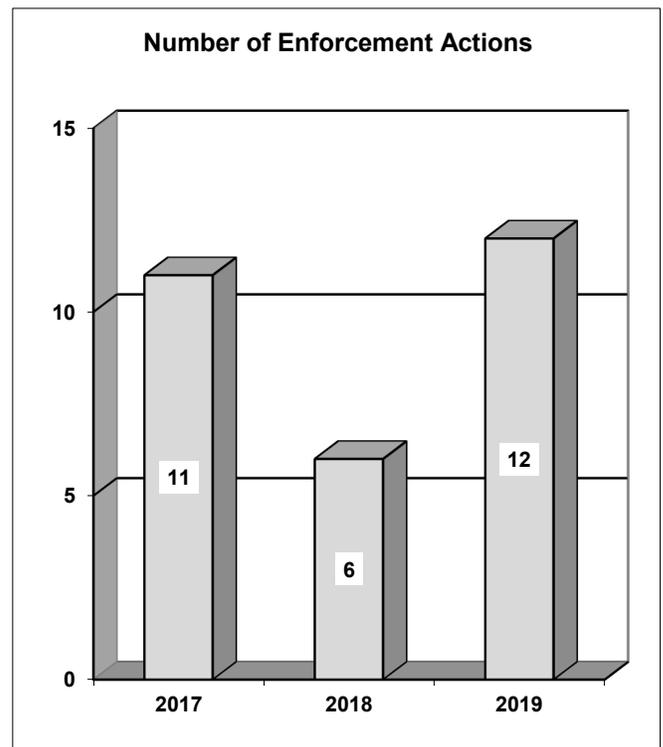

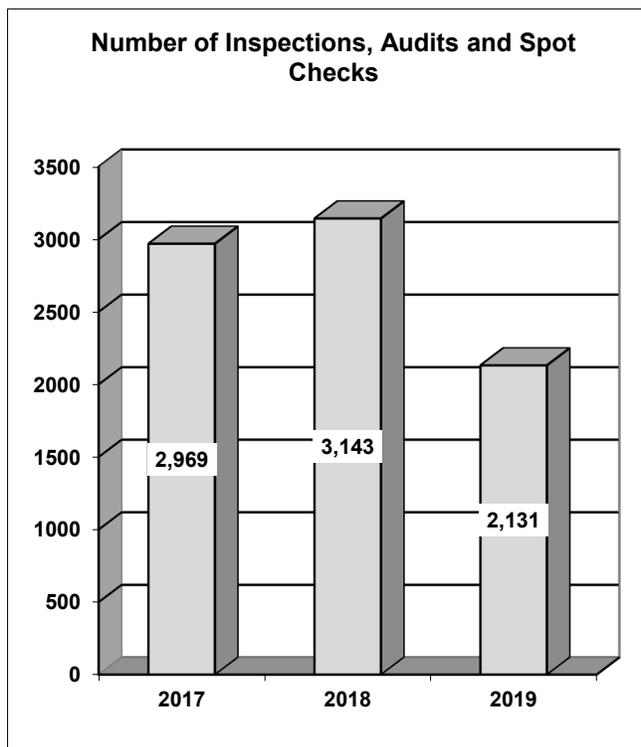

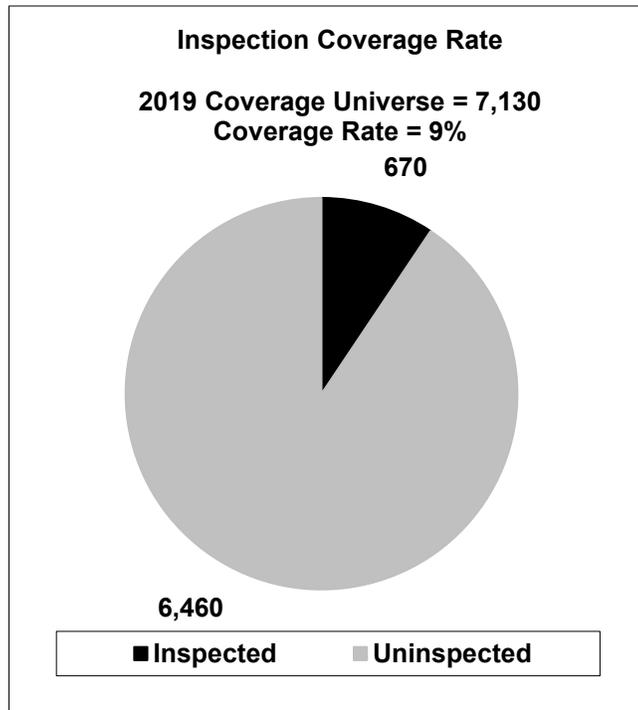

The program has placed an increased emphasis on participating in pre-construction meetings to provide compliance expectations before projects start, and directing inspections toward active construction sites. Inspections in this category are prioritized by focusing on large construction sites in non-delegated areas, and state and federal projects, along with sites brought to MDE's attention by citizen complaints. Larger sites take longer to inspect, which results in fewer sites visited, but their impact when in noncompliance can be much greater than small sites.

As in previous years, the Allegany, Caroline, Frederick, Queen Anne's and Washington Soil Conservation Districts (SCDs) continued to perform erosion and sediment control inspections on behalf of MDE under memoranda of understanding. These districts are independent of county government. The numbers of sites inspected and numbers of inspections appearing in the following table include only MDE's activities.

Stormwater Management and Erosion & Sediment Control for Construction Activity

Stormwater Management and Erosion & Sediment Control for Construction Activity

Water Supply Program

PURPOSE

The mission of WSP is to ensure that public drinking water systems provide safe and adequate water to all current and future users in Maryland, and that appropriate usage, planning, and conservation policies are implemented for Maryland's water resources. This mission is accomplished through proper planning for water withdrawal, protection of water sources that are used for public water supplies, oversight and enforcement of routine water quality monitoring at public water systems, regular on-site inspections of water systems, review of design plans for new or upgraded water treatment, and prompt response to water supply emergencies. In addition to ensuring that public drinking water systems meet federal and state requirements under the Public Water System Supervision program, WSP also administers the wellhead/source protection program, and issues Water Appropriation and Use Permits for both public and privately-owned water suppliers, and thousands of other entities withdrawing water for agricultural, industrial or commercial purposes statewide. The program also certifies laboratories that analyze water samples and issues licenses for water samplers, and oversees two professional licensure Boards: the Board of Waterworks and Waste Systems Operators and the Board of Well Drillers. Due to the fact that all of these activities reside together in WSP, Maryland has the ability to evaluate and regulate public drinking water systems from a broad perspective that includes an evaluation of the resource for both quantity and quality. WSP's comprehensive approach ensures safe and adequate drinking water for over 5 million Marylanders, while protecting the sustainability of water resources for present and future Marylanders.

Community and Non-Transient Non-Community Water Systems

WSP regulates approximately 1,009 community water systems, including municipal, county, and private systems, and non-transient non-community water systems such as businesses, schools, and day care facilities that have their own water source. These systems must test for over 90 regulated contaminants on schedules that vary based on water source, system type and population.

Transient Non-Community Water Systems

In addition, there are approximately 2,263 transient non-community water systems such as rest areas, gas stations, campgrounds, and restaurants with their own water source throughout the state, which are regularly inspected and tested for acute contaminants. Since 1998, WSP has negotiated delegation agreements with county health departments for enforcement of Safe Drinking Water Act regulations for the transient non-community water systems. Seventeen of the 23 counties have delegated authority for these systems. WSP directly enforces the requirements for the six counties that have either returned their delegated authority (Anne Arundel, Charles, and Cecil), or not accepted the delegated authority (Wicomico, Prince George's, and Montgomery).

Drinking Water Laboratory Certification

This program is mandated by the federal Safe Drinking Water Act. The certification assures the reliability of the compliance samples that are analyzed by state-certified laboratories. The primary means of evaluating the safety of the drinking water supplies are based on standard and reliable data. The laboratories certified under this program

are also used by the county health departments and other MDE programs to analyze drinking water for private wells, and for investigation of underground storage tanks.

Water Appropriation and Use Permits

In order to conserve and protect the state's water resources, WSP regulates water withdrawals and diversions through a permitting system. Water uses for most purposes, including public supply, business, institutional, subdivision of land, or agricultural use over 10,000 gallons per day (gpd), require a permit. Groundwater users of 5,000 gpd or less may file for a Notice of Exemption in lieu of obtaining a permit unless the use is by a community water system, or within a designated water management strategy area. Maryland regulates water use under the doctrine of reasonable use, which means the quantity must be reasonable for its intended purpose, and the impacts of the use to the natural resources of the state must not be unreasonable.

Board of Waterworks and Waste Systems Operators

In order to protect the quality of water in Maryland, protect public health and prevent pollution, WSP oversees a state-wide certification program for operators and superintendents of water treatment plants, water distribution systems, wastewater treatment plants, wastewater collection systems, industrial wastewater facilities, and certain pretreatment facilities that discharge to sanitary sewers. Certification helps to protect public health and the environment by setting minimum education, experience, and examination standards that applicants must satisfy.

Board of Well Drillers

As part of Maryland's strategy to assist in the orderly development and protection of its groundwater resources, and protect the public interest, the State Board of Well Drillers was created in 1968. The board is responsible for regulation of individuals who engage in the practice of well drilling, and installation of water pumps and water conditioning equipment. It sets standards and administers qualifying examinations to license individuals who drill water wells, or install water pumps or water conditioning equipment. The practice of well drilling includes engaging in any of the following activities for profit: (1) Making, altering, repairing or sealing a well; or (2) Installing, altering, repairing or disconnecting well system equipment.

PROCESS

Community and Non-Transient Non-Community Water Systems

WSP uses a multi-tier approach to ensure that public drinking water systems in Maryland are able to provide a safe and adequate supply of drinking water to their consumers. This approach includes review and approval of potential water sources and construction plans; evaluation of a new system's technical, financial, and managerial capacity; regular inspection of drinking water facilities; close oversight of water quality monitoring; and ensuring licensed operators are employed by water treatment facilities.

Public water systems are required to conduct routine sampling of their water quality. The type and frequency of analysis depend on the type of system, its population, and the vulnerability of its water supply. WSP reviews and evaluates more than 50,000 water quality records each year. Emphasis is placed on preventive measures to avoid serious public health incidents. The vast majority of drinking water violations are

corrected immediately, or following the issuance of a Notice of Violation. Systems must notify their consumers when violations of the Safe Drinking Water Act occur.

Transient Non-Community Water Systems

In Maryland, 17 counties have received the delegation authority for the oversight and enforcement of transient non-community water systems in their counties. These counties conduct routine inspections and ensure that systems are monitored in accordance with state and federal requirements. Transient non-community water systems are required to monitor only for contaminants that have acute health risks, including nitrate, nitrite, and bacteria. In addition to providing funding, WSP provides guidance and training to the counties, and reports health-based violations to EPA for these systems. WSP conducts evaluations on all new public drinking water wells to determine whether groundwater systems are under the influence of surface water. Groundwater systems under the influence of surface water will be required to meet federally-mandated treatment technique requirements, and to conduct additional bacteria monitoring as well as turbidity monitoring. In addition, WSP performs audits of the delegated counties every three years to ensure that regulations are implemented appropriately.

WSP directly oversees implementation of federal and state regulations for 695 transient non-community water systems in Anne Arundel, Charles, Prince George's, Montgomery, Cecil, and Wicomico counties since these six counties declined acceptance of the delegated program. Oversight includes regular inspections of the systems, enforcement of monitoring requirements, and follow-up to any water quality problems that arise. WSP reports technical and health-based violations to EPA on a quarterly basis for these systems.

Drinking Water Laboratory Certification

The Maryland laboratory certification program currently certifies 105 laboratories; 44 in-state and 61 out-of-state through reciprocal certification. These labs analyze compliance samples for public drinking water systems in Maryland. The certification of in-state laboratories includes an annual document review and a triennial on-site evaluation (inspection). An in-state laboratory may not analyze drinking water samples for compliance under the Safe Drinking Water Act until the department has conducted an on-site evaluation. Each Maryland laboratory is evaluated by the appropriate personnel for the specialized area of analysis (i.e., microbiology, inorganic chemistry, or organic chemistry). Maryland does not perform on-site evaluations for out-of-state laboratories. Therefore, the actual inspection completion rate has been adjusted in the FY19 report based on the universe of Maryland inspection requirements (73 inspections at 44 active in-state laboratory sites).

Water Appropriation and Use Permits

The Water Appropriation and Use Permit review process is complex, and requires significant technical and administrative evaluation. All applicants except agricultural users are required to submit the results of aquifer tests and hydrogeologic investigations as part of their permitting process. For agricultural users, WSP staff conducts hydrogeologic investigations on behalf of the applicant.

Applicants for new permits or increases in large withdrawals must identify adjacent property owners and notify them of a pending application. WSP verifies the notification list and sends an additional notification, providing a brief summary statement of the potential impacts and providing an opportunity for the public to comment or request an informational meeting. This notice is also published in a local paper. In some cases, WSP may determine that the requested withdrawal could have an unreasonable impact on the water resource and/or other users in the vicinity and, as a result, the permit request is denied or modified.

The program uses a web-based database (Water Supply Information and Permitting System) that is geographically based, allowing project managers to observe the relationship between a withdrawal request and other nearby permits.

SUCSESSES/CHALLENGES

Water Appropriation and Use Permits

In FY19, 450 water appropriation permits were issued. At the end of the FY19, there were 6,979 active permits reflecting a total annual average authorized use of about 10 billion gallons per day. WSP worked with water users who violated their Water Appropriation and Use Permit requirements to bring them into compliance. NOVs were sent to permit holders with outstanding reporting requirements, expired permits, and those who used water in excess of their permitted allocation. Two hundred and ten violation notices were issued in FY19.

Water Audits

Larger public water systems are required to conduct water audits and submit water loss reduction plans to reduce unaccounted-for water. A total of 37 water audits and 14 water loss reduction plans were submitted for CY18. Reviews of the audits showed that 16 of the water systems that submitted an audit report had excessive unaccounted-for water loss. These systems are required to submit a water loss reduction plan for the next reporting cycle.

Laboratory Certification

In FY19, the Laboratory Certification Program met its targeted goal of completing 29 triennial inspections at 21 of the 44 in-state certified laboratories for the year. This was an increase from 23 on-site evaluations in FY18.

Public Water System Enforcement

As of June 30, 2019, 262 enforcement actions had been issued to community and non-transient non-community water systems. Seventeen community and non-transient non-community water systems had violations that were based on exceeding drinking water health standards. The remaining violations were technical violations.

Water Supply Program

Water Appropriation Permits

Waterway Construction – Dam Safety

PURPOSE

The purpose of the Dam Safety Division is to ensure that dams and other impoundment structures are designed, constructed, operated, and maintained safely, in order to protect public safety. The Dam Safety Division issues waterway construction permits for new dams and ponds, as well as for modifications to existing water impoundments. In addition, the Dam Safety Division conducts safety inspections of existing dams, conducts construction inspections, and provides technical assistance to dam owners and local SCDs.

Many dams in Maryland were constructed decades ago and are now showing signs of deterioration. In order to provide safe service, dams require frequent safety inspections, monitoring, maintenance, and rehabilitation. In addition to larger dams, thousands of smaller dams (typically under 20 feet high) were constructed decades ago with corrugated metal pipe spillways. Often constructed on farms that have since been developed into residential communities, many of these dams are now in poor condition and threaten the safety of residents who live in newer homes constructed downstream of them.

The Dam Safety Division, through its dam inspection, dam owner assistance, permitting, and enforcement activities, seeks to prevent dam failures and the resultant loss of life, property damage, and environmental impacts. In addition to possible loss of life and significant property damage, significant erosion of stream channels and sediment deposition occur downstream of a failed embankment structure. In addition, dam failures can cause significant damage to wetlands and habitat, both aquatic and terrestrial, through the destructive force of the depth and velocity of the flood wave.

AUTHORITY

STATE: Environment Article, Title 5, Subtitle 5; COMAR 26.17.04.05

PROCESS

Dam Safety Division engineers conduct quality assurance inspections. The Compliance Program may inspect the site to determine whether construction has begun, perform sediment control inspections at the request of the Dam Safety Division, or respond to citizens' complaints.

Dams are classified into three categories according to the consequences of a potential failure:

- High Hazard: loss of life and significant property damage
- Significant Hazard: property/infrastructure damage
- Low Hazard: damage to floodplain and the dam itself

The inspection frequency is based on national guidelines and is responsive to the potential failure consequences as follows:

Hazard Class	Number in Category	Inspection Frequency	Sites Targeted/Year
High	92	Annually	92
Significant	148	Every 3 years	49
Low	299	Every 5-7 years	50
Total	539	--	191

Based upon the inspection findings, the Dam Safety Division may initiate enforcement actions, varying from a letter advising the owner to correct routine deficiencies up to issuing an order requiring immediate repairs to be performed or removing the structure due to an unsafe condition. MDE does not have the statutory authority to impose administrative or civil penalties for this program. However, the Office of the Attorney General has statutory authority to collect criminal penalties.

SUCCESSSES/CHALLENGES

The Dam Safety Division’s compliance success is achieved when all required dam inspections are complete; dams are maintained in acceptable condition; emergency action plans are up to date and exercised regularly as required; required dam repairs are completed in a timely manner; and new dams, dam repairs, dam upgrades, and dam removals are designed and constructed to meet industry standards. Of Maryland’s 92 high-hazard dams, 56 were inspected in FY19.

All high- and significant-hazard dams require an annually updated and approved EAP. Updates to the plans are due to MDE for review and approval by May 1 of each year. Of the 240 dams requiring EAPs, 135 dam owners met the requirement in FY19. This represents compliance rate slightly greater than 50%. EAPs are also required to be “exercised” a minimum of once every 5 years. By the end of FY19, only 73 dam owners or 30% had completed this requirement.

The Dam Safety Division provides assistance to dam owners and local emergency management and public works agencies in implementing the EAP table top exercises. In FY19, Division staff participated in table top exercises covering 26 dams. To assist the dam community with improving compliance, division staff coordinated, prepared materials for, and facilitated two county-wide exercises in FY19 (Allegany, Calvert) and is continuing this practice in FY20.

The division provides outreach and education to dam owners, designers, operators, and the general public through a number of different mechanisms. Each year the division provides a daylong dam owner workshop focusing on design, inspection, and maintenance. In FY19, this workshop was held in November with approximately 200 attendees. In June of 2019, the Dam Safety Division provided smaller, more-technical training, to designers and local government regulators as part of a comprehensive three-track workshop covering stormwater management, dam safety, and sediment and erosion control. In addition, the division continues to update its website with education and outreach information, provides bi-annual newsletters to the dam community, and actively participates in numerous events/seminars provided through the Association of

State Dam Safety Officials. During FY19, the division provided technical training on dam breach analysis and hazard classification through multiple informal and five formal sessions serving approximately 185 attendees in total. Six new technical design memos have been added to the website in FY19.

In FY19, the division assisted a dam owner in securing approximately \$800,000 in funding from the Chesapeake and Atlantic Coastal Bays Trust Fund to remove a privately-owned significant-hazard dam in Harford County that was in imminent danger of failure.

The condition of dams is ever evolving: vegetation grows, animals burrow into earthen embankments, and materials deteriorate. Therefore, deficiencies are often found during each inspection, despite the best efforts of many dam owners. Sometimes these deficiencies are minor and can be corrected within a day, but some may require major costly construction efforts. The Dam Safety Division considers the ability of dam owners to pay for necessary maintenance, upgrades and repairs to be a continuing threat to the safety of dams in Maryland. Approximately 50% of all dams in Maryland are privately owned, by corporations, homeowners' associations, or private citizens. These entities often have little or no mechanism to raise the funds necessary to complete significant maintenance/repair efforts. The combination of periodic inspections and owner outreach and education raises awareness among dam owners of their responsibilities and liabilities, and attempts to identify issues before they develop into costly repair projects.

The Dam Safety Division has invested in training and equipment to facilitate improved and more-frequent inspections. This includes video camera systems to inspect pipes inside the dam, a drone to perform aerial reconnaissance, a smartphone-based inspection application, and safety training for inspectors.

* Coverage rate above is computed as the total number of sites inspected and dividing that by the dams in operation. See narrative for more detail about the Dam Safety Division’s approach to inspection frequency.

Waterway Construction – Dam Safety

Wetlands and Waterways Program

Nontidal Wetlands, Waterways, and Floodplain

PURPOSE

The goal of the Nontidal Wetlands Protection Act is to attain no net loss in nontidal wetland acreage and to strive for a net resource gain in non-tidal wetlands over present conditions. One of the mechanisms established by the act to accomplish this goal is a comprehensive regulatory program that targets all activities that have a potential to adversely impact nontidal wetlands. These activities include the following:

- Removal, excavation, or dredging of soil or materials of any kind;
- Changing existing drainage or flood retention characteristics;
- Disturbance of the water level or water table by drainage, impoundment, or other means;
- Filling, dumping, discharging of material, driving piles, or placing obstructions;
- Grading or removal of material that would alter existing topography; and
- Destruction or removal of plant life.

Through its permit application review process, MDE first prevents wetland loss by requiring the applicant to evaluate project designs that will avoid wetland impacts. Based on this evaluation of alternatives, if MDE finds that impacts are unavoidable, the applicant is required to utilize the project design that will minimize the wetland impacts and provide appropriate mitigation for those impacts.

Mitigation, required for all unavoidable impacts that are authorized by MDE, means that the applicant must replace lost wetland acreage, function and value. This is usually accomplished by requiring the creation of new wetlands, restoration of relic wetlands, enhancement of degraded wetlands or some acceptable combination. MDE may also accept monetary compensation if it is determined that mitigation for nontidal wetland losses is not a feasible alternative. For example, monetary compensation may be accepted if the size of the nontidal wetland loss is less than one acre and a suitable mitigation site cannot be identified within the impacted watershed. The payment is deposited into the Nontidal Wetlands Compensation Fund and used by the state to construct non-tidal wetlands throughout Maryland.

In addition, MDE is also responsible for addressing potential impacts to the state's nontidal waterways. Authorization is required to conduct any activity that changes the course, current or cross-section of a nontidal stream or body of water, including the 100-year floodplain. Waterway construction activities are evaluated to ensure that they do not create flooding on upstream or downstream properties. Such activities are additionally evaluated to ensure protection of aquatic resources, including the maintenance of fish habitat and migration, from degradation.

AUTHORITY

STATE: Environment Article, Title 5, Subtitles 5 and 9; COMAR 26.17 and 26.23

PROCESS

MDE inspectors schedule routine inspections of the facilities adhering to the assigned priority. The inspection frequency is adjusted as site conditions or workload demand. Inspections are performed to verify that the projects are in accordance with the authorization. Because a site may involve nontidal wetlands, waterways and/or 100-year floodplain impacts, inspectors evaluate whether all the resultant construction impacts are in accordance with the permits. This may involve identifying or verifying a non-tidal wetland boundary and documenting findings in the inspection report. At sites where there may be 100-year floodplain impacts, it may be necessary to determine the floodplain boundary before project compliance can be determined.

MDE does not have the statutory authority to collect administrative penalties for this program.

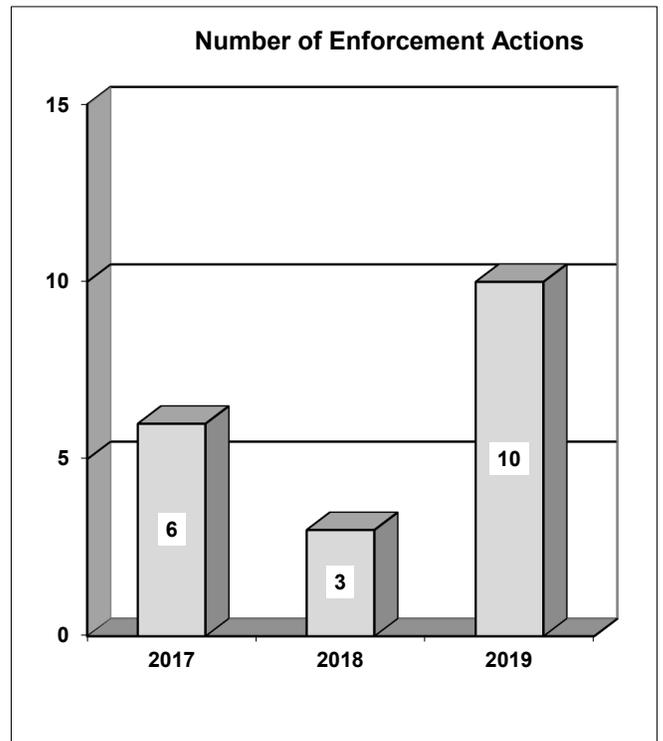

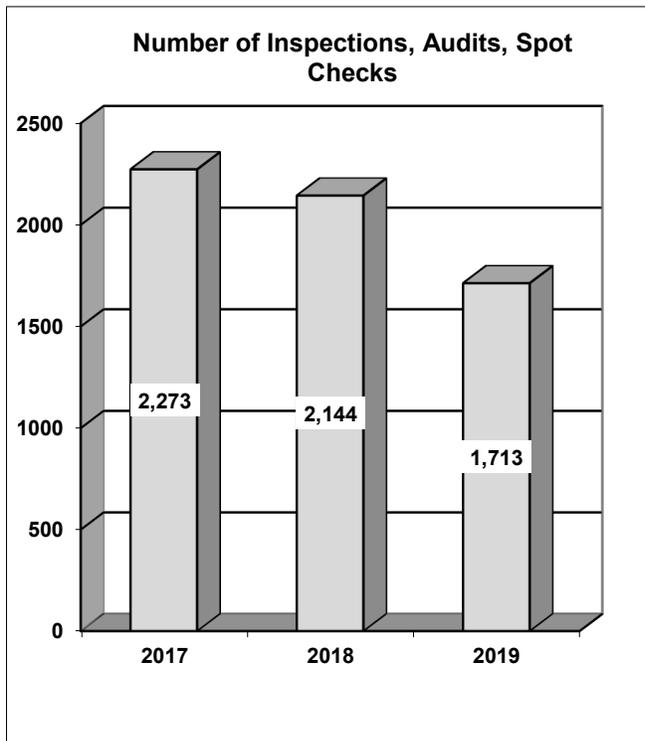

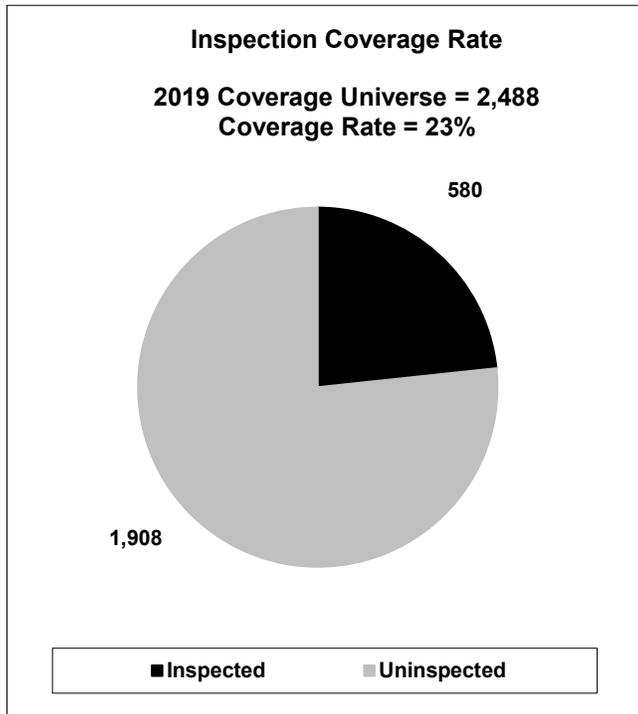

SUCCESSSES/CHALLENGES

The Compliance Program evaluated compliance for 23% (580) of the nontidal wetlands sites and found seven instances of significant noncompliance, equating to a compliance rate of 99%. The program will continue to work to maintain the high rate of compliance in this area.

Wetlands and Waterways – Nontidal and Floodplain

Wetlands and Waterways - Tidal

PURPOSE

Tidal wetlands are open water and vegetated estuarine systems affected by the rise and fall of the tide. In 1970, the legislature enacted the Wetlands and Riparian Rights Act to restrict and regulate activities conducted in tidal wetlands in order to preserve and protect them.

Prior to enactment of the Wetlands and Riparian Rights Act wetlands were being destroyed throughout tidewater Maryland every year. Today, through its regulatory program, MDE strives for a net resource gain over present conditions. Tidal wetlands are managed to provide reasonable use while furnishing essential resource protection. Licenses are issued for activities conducted in state wetlands by the Maryland Board of Public Works, based on recommendations from MDE. Permits are issued directly by MDE for activities conducted in private wetlands. A license or permit must be obtained before a person dredges, fills or otherwise alters a tidal wetland.

The following projects require authorization from MDE if conducted in tidal wetlands: dredging or filling; shoreline protection projects, including marsh creation, stone revetments and bulkheads; piers; boat ramps; jetties, groins and breakwaters; cable crossings; storm drain systems; and similar structures. The regulatory process for tidal wetlands is similar to that described for nontidal wetlands and waterways. Applications are evaluated to ensure that appropriate steps are taken to first avoid, and then minimize impacts to tidal wetlands. Mitigation is required for unavoidable impacts, with the amount of mitigation based on resources impacted; type of mitigation proposed; and location of mitigation. In-kind and on-site mitigation is preferred and required wherever appropriate site conditions exist.

AUTHORITY

STATE: Environmental Article Title 16; Subtitle 2; COMAR 26.24

PROCESS

Upon issuance of a license/permit/authorization, the file is transferred to the Compliance Program where an inspection priority is assigned. The inspectors then schedule routine inspections of the facilities adhering to the assigned priority as workload allows. Facilities are not given advance notification of routine inspections. At any time during the process, the inspection frequency can be adjusted as site conditions or workload demand. Inspections typically verify that the work being performed is in accordance with the work authorized and that all license or permit conditions are in compliance.

MDE does not have the statutory authority to collect administrative penalties for this program.

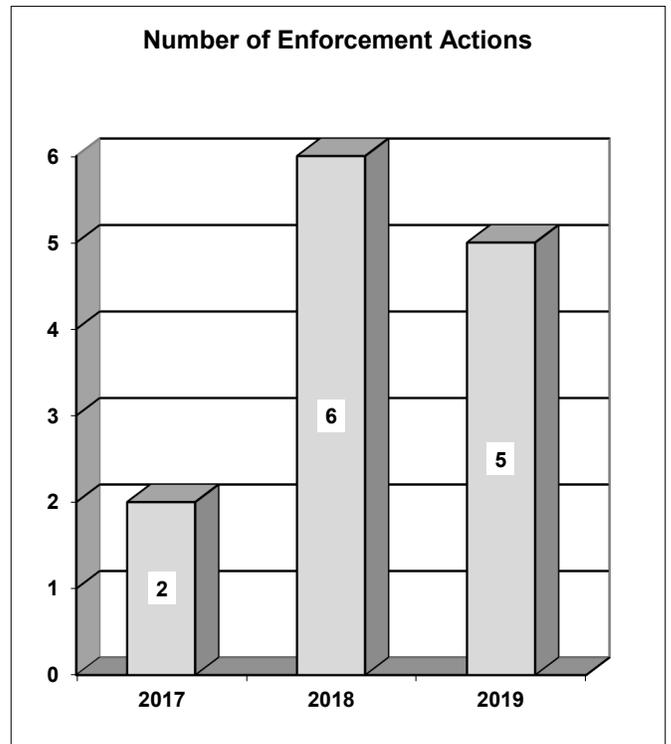

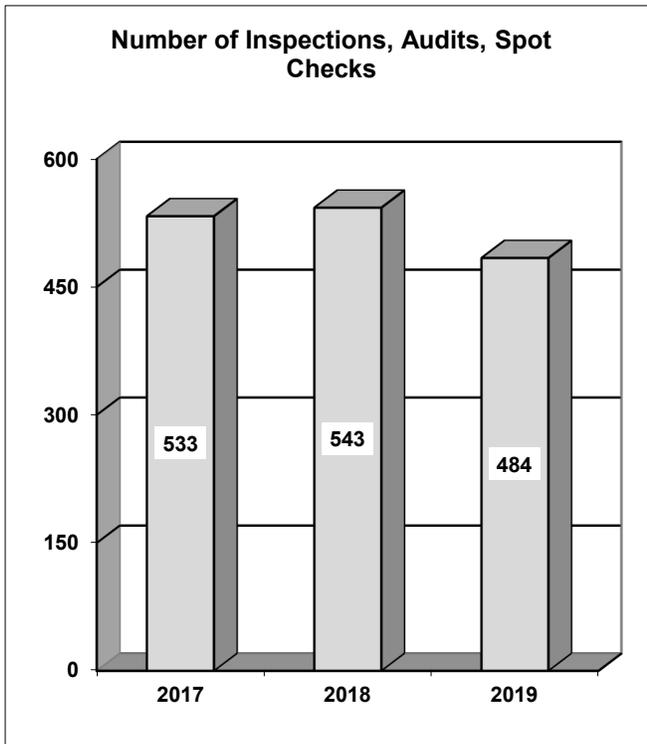

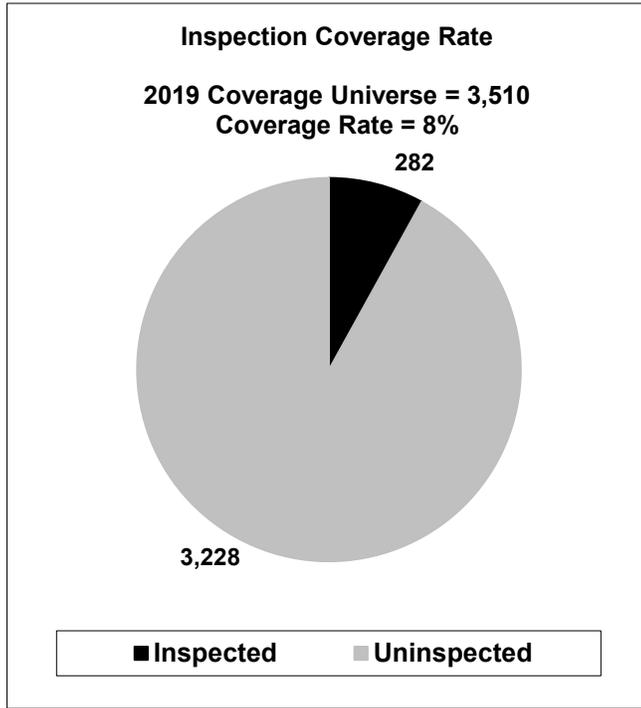

SUCSESSES/CHALLENGES

WSA actively works to resolve numerous cases involving unauthorized impacts to tidal wetlands. Many of the cases are developed as the result of citizen complaints about pier extensions, adding boat lifts or boat houses, or building or extending bulkheads. Citizen complaints help MDE identify the majority of tidal wetlands violations through on-site inspections. The Compliance Program evaluated compliance for 8% (282) of the tidal wetlands sites and found five instances of significant noncompliance, equating to a compliance rate of 98%. The program will continue to work to maintain the high rate of compliance in this area.

Wetlands and Waterways – Tidal

This page intentionally left blank.

**OFFICE OF BUDGET AND
INFRASTRUCTURE FINANCING**

Water Supply and Sewerage Construction

PURPOSE

Adequate water and sewer infrastructure is essential to public health and water quality protection. Water and sewerage construction permits help ensure that projects for water and sewerage are designed and constructed in accordance with sound engineering principles and comply with the state design guidelines to protect water quality and public health. These permits are required before installing, extending or modifying community water supply and/or sewerage systems including treatment plants, pumping stations and major water mains and sanitary sewers greater than 15 inches in diameter. These permits also help to ensure compliance with local comprehensive land use and water and sewerage plans and are supportive of community revitalization and land redevelopment.

AUTHORITY

STATE: Environment Article, Title 9, Subtitle 2, COMAR 26.03.12

PROCESS

Pre-approval: The applicant must show that the proposed water or sewerage facility is included in the current county water and sewerage plans, has a valid NPDES discharge permit (if applicable), and will be operated either publicly or privately under a financial management plan.

Post-approval: The project must be constructed in accordance with the approved plans and specifications. Staff engineers perform inspections to verify the facility is constructed to the approved design and/or the permittee submits "as built" plans or certification that the project was built in accordance with original plans as approved by MDE. Other approvals associated with the construction (i.e., sediment control, wetlands, etc.) are inspected under those media and by those inspectors. This program does not have authority to pursue traditional enforcement actions. For projects where MDE is providing funding, construction violations would necessitate the return of state funds by the local jurisdiction. If a construction violation were to go unnoticed, the eventual result would be the failure of the facility to meet its discharge permit requirements or other performance requirements. At that time, traditional enforcement tools available under the discharge permit program would be utilized.

There is no correlation between the number of permits issued and the number of sites inspected because inspections are performed only at active construction sites for projects being financed by MDE. Once construction has begun, these funded projects are inspected on a routine basis through completion.

SUCCESSSES/CHALLENGES

MDE monitors all projects for which state financial assistance is being provided. Accordingly, the annual number of inspections will vary as the number of financed projects initiate and complete construction. The program is on target with its goals.

**OFFICE OF THE ATTORNEY GENERAL
ENVIRONMENTAL CRIMES UNIT**

Environmental Crimes Unit Executive Summary

The Environmental Crimes Unit (ECU) is a part of the Maryland Office of the Attorney General's Criminal Division, and is responsible for the investigation and prosecution of environmental crimes throughout Maryland. During FY19, ECU handled 97 in-coming inquiries to include referrals, complaints, and/or requests. Of that total, ECU opened 24 preliminary investigations and 41 formal investigations, for a total of 65 investigations. Of the 65 investigations, 24 were the result of referrals from MDE. At the close of the 2019 fiscal year, 26 investigations remained open or pending. Criminal charges were filed and/or prosecuted by ECU in nine cases. Defendants were found guilty of 12 separate criminal charges. These cases resulted in jail terms totaling six years, six months, terms of probation totaling 11 years, six months, and criminal fines and restitution totaling \$137,950 imposed, with \$43,450 to be paid, the majority of which was directed to various environmental funds. The matters investigated and reviewed without opening formal criminal investigations were the result of insufficient information available to justify a full-scale investigation; matters readily resolved; or matters sent to another, more appropriate agency to handle.

Environmental Crimes Unit

PURPOSE

ECU is responsible for the coordination, investigation and prosecution of criminal environmental violations and other associated criminal charges throughout the State of Maryland. Typical environmental cases involve the illegal discharge of pollutants into the waters of the state, the illegal accumulation, storage or disposal of hazardous waste, open dumping and accumulation of solid waste, violations of natural resource laws and frauds associated with Maryland's lead paint laws.

Various factors are considered when making the determination whether to pursue criminal enforcement for violations of Maryland's environmental laws. These considerations can include: (1) whether there is significant environmental harm and/or long term effects on the public health; (2) whether there is evidence of intentionally deceptive, misleading or fraudulent misconduct; (3) whether the violator was operating outside the regulatory scheme; (4) whether the violations are repetitive; (5) whether the violation(s) were part of an isolated incident or instead a pattern of continuing conduct; and (6) whether the violator(s) has either a prior criminal record or a history of civil/regulatory enforcement action.

In FY19, the unit consisted of two Assistant Attorneys General and one criminal investigator. A second, contractual investigator retired mid-year and the position remains unfilled. ECU investigators have specialized training and experience in the investigation and prosecution of environmental crimes. Additionally, the unit coordinates

with the EPA, MDE the Maryland Department of Natural Resources and other local, state and federal agencies to prosecute criminal violations of Maryland's environmental laws.

AUTHORITY

The General Assembly, through the Environment Article, provides the Attorney General exclusive or concurrent authority to prosecute criminal violations stemming from investigations involving water pollution, air pollution and waste. Furthermore, the Attorney General's Office is granted authority pursuant to Article V, Section 3 of the Constitution of Maryland to investigate and prosecute certain specified crimes as directed by the governor. Historically, the governor has included authority to investigate and prosecute violations of Maryland's Litter Control Law (§10-110 of the Criminal Law Article) and other broadly defined related offenses. The unit may seek the governor's authorization to investigate and prosecute other violations not within the Environment Article on either a case-by-case basis, or based on specific areas of concern.

PROCESS

ECU receives complaints or allegations of possible criminal activity from multiple sources, including citizen complaints, other governmental and law enforcement agencies, MDE administrations, or as a result of ECU investigation initiatives. Complaints are initially reviewed by an ECU prosecutor and investigator to determine the appropriateness and available resources for either a preliminary or a full investigation. Cases deemed potentially suitable for prosecution are then subjected to a full investigation for the purpose of gathering sufficient evidence to accurately assess whether to file criminal charges. ECU prosecutors file charges by way of criminal information or by indictments returned by grand juries. The cases are then handled by the unit throughout the trial, subsequent violations of probation and any possible appeals. In FY19, ECU handled three violations of probation, an appeal of a post-conviction matter, and a re-sentencing.

SUCCESSSES/CHALLENGES

The goal of ECU is to investigate and prosecute environmental crimes. Restoration to higher staffing levels could expedite investigations and expand the number of prosecutions of more-complex environmental crimes. Criminal cases can only be properly assessed with complete investigations to properly assess and file charges. An ongoing challenge is to improve attorney and investigative resources for better effectiveness. The unit's responsibilities continue to be carried out with smaller staff than in the past, with a total number of four at the end of the fiscal year. At this time, there is no sworn law enforcement with statewide authority assigned to the unit, which can limit investigations.

MDE REFERRALS

In FY19, as a result of MDE referrals, ECU opened 24 investigations. ECU filed charges in three cases generated from MDE referrals, and three prosecutions were completed during the fiscal year. Other investigations remain on-going. Charges may also be formally filed in a different fiscal year than when the investigation was opened by ECU. Additionally, in prosecuting criminal cases, it is not uncommon for charges in a case to be filed during one fiscal year and concluded during a subsequent fiscal year.

CHART 1 shows the number of total investigations, initiated from MDE referrals, conducted by ECU during FY19.

FY19 – INVESTIGATIONS OPENED		
SOURCE OF COMPLAINTS		INVESTIGATIONS OPENED
M D E	ARA	4
	LMA	4
	WMA	7
	ERD	9
MDE TOTAL		24

CHART 2 shows the number of cases initiated and/or concluded by ECU during FY19. The figures below include prosecutions, violations of probation, appeals and other post-trial proceedings.

FY19 – PROSECUTIONS			
SOURCE OF COMPLAINTS		NO. OF CASES FILED	NO. OF CASES CONCLUDED
M D E	ARA	0	0
	LMA	1	4
	WMA	0	4

30. Wetlands – Tidal
31. Water Supply and Sewerage Construction
32. Environmental Crimes Unit

APPENDIX C MDE Penalty Policy

MDE's Approach to Determining the Appropriate Response to Violations

MDE is committed to a consistent, timely and appropriate compliance assurance program, which is protective of the public health and the environment while creating a credible deterrent against future violations. It is MDE's policy to assess fair and equitable penalties in keeping with the factors specified by the governing statute, and commensurate with the nature of the violations. The statutory factors that MDE must consider in assessing administrative penalties are:

1. The **willfulness of the violation**, the extent to which the existence of the violation was known to but uncorrected by the violator, and the extent to which the violator exercised reasonable care;
2. Any **actual harm to the environment or to human health**, including injury to or impairment of the air, waters, or natural resources of this State;
3. The **cost of cleanup and the cost of restoration** of the natural resource;
4. The **nature and degree of injury to or interference** with general welfare, health, and property;
5. The extent to which the **location of the violation**, including the location near waters of this State or areas of human population, creates the potential for harm to the environment or to human health and safety;
6. The **available technology** and economic reasonableness of controlling, reducing, or eliminating the violation;
7. The degree of **hazard posed by the particular pollutant** or pollutants involved;
8. The extent to which the current violation is part of a **recurrent pattern** of the same or similar type of violation committed by the violator.

MDE will consider each of the specific factors on a case-by-case basis. While all factors set forth in the statute will be considered, it is not necessary for all of the factors to be applicable before the maximum penalty may be assessed. A single factor may warrant the imposition of the maximum penalty. Furthermore, all factors, even if applicable in a given case, are not necessarily of equal weight in MDE's determination of a reasonable penalty.

APPENDIX D

Environmental Audit Guidance

(Revised 5/15/2006)

The Maryland Department of the Environment (MDE) recognizes the benefit from regulated entities that routinely evaluate their internal work processes for compliance with federal and State environmental requirements. Equally as important as identifying violations is the reporting of such violations to MDE for proper and complete remediation and abatement. MDE encourages self-auditing and compliance management as effective environmental management techniques. MDE may use its enforcement discretion in evaluating penalties for regulated entities that disclose violations of environmental laws or regulations as provided herein.

This guidance is not intended nor should it be construed to be a regulation as defined in Section 10-101, State Government Article. It sets forth criteria and guidelines for use by MDE staff in resolution of enforcement cases, and does not confer any legal rights upon any person.

Definitions

“Department” means the Maryland Department of the Environment.

“Environmental Audit” and “Compliance Management System” have the definitions used in the Environmental Protection Agency’s “Incentives for Self-Policing: Discovery, Disclosure, Correction and Prevention of Violations,” Final Policy Statement effective May 11, 2000:

“Environmental Audit” is a systematic, documented, periodic and objective review by regulated entities of facility operations and practices related to meeting environmental requirements.

“Compliance Management System” encompasses the regulated entity’s documented systematic efforts, appropriate to the size and nature of its business, to prevent, detect, and correct violations through various procedures, policies, mechanisms, and efforts.

“Environmental Requirement” means a requirement in (1) a state or federal law or regulation enforced by the Department, a rule adopted by the Department, a permit or order issued by the Department, or (2) an ordinance or other legally binding requirement of a local government unit under authority granted by state law relating to environmental protection.

“Regulated Entity” means a corporation, partnership, individual, municipality, governmental unit, or any other legal entity regulated under federal, state, or local environmental laws or regulations.

Statement of Guidance

- A. The Department may reduce a civil or administrative penalty for violations of environmental requirements that are voluntarily disclosed following an environmental audit or as a result of compliance management if:
1. The regulated entity discloses the violation to the Department in writing within 21 days after the violation is discovered, or within a shorter time limit, if required by statute or regulation;
 2. The regulated entity promptly initiates action to correct or eliminate the violation and all public or environmental harm caused by the violation. If the violation cannot be fully corrected within 60 days, the regulated entity shall submit a compliance plan to the Department within 60 days for review. The regulated entity shall maintain compliance with the plan as approved by the Department;
 3. The regulated entity provides the Department with a plan that includes steps to prevent recurrence of the violation; and
 4. The regulated entity fully cooperates with the Department regarding investigation of the disclosed violation.
- B. The relief outlined in Section A is not available if the Department determines that:
1. The violation was discovered through a legally mandated monitoring or sampling requirement prescribed by statute, regulation, permit, judicial or administrative order, or consent agreement. The violation must be discovered voluntarily and not as a result of an environmental requirement;
 2. The Department or a third party discovered the violation prior to disclosure by the regulated entity to the Department, or the regulated entity made the disclosure after commencement of a federal, State, or local agency inspection, investigation, or request for information;
 3. The violation was committed willfully, wantonly, intentionally, knowingly, or with gross negligence by the regulated entity;
 4. The regulated entity did not promptly initiate or diligently act to correct or eliminate the violation;

5. The violation made imminent or caused significant environmental harm or had a significant effect upon public health;
 6. The same or a related violation has occurred within the past three years or the violation is part of a pattern of recurrent violations by the regulated entity. For purposes of this section, violation includes any violation of a federal, State or local environmental law or regulation identified in a judicial or administrative order, consent agreement, order or decree, complaint, or notice of violation, conviction or plea agreement; or
 7. The disclosure is made for a fraudulent purpose.
- C. This guidance is not intended for use under circumstances in which the violation(s) at issue would result in the regulated entity gaining an economic advantage over its competitors.
- D. This guidance does not affect individual liability for criminal misconduct.
- E. This guidance does not apply to liability under a judicial or administrative order, consent agreement, order or decree, complaint, notice of violation, conviction or plea agreement.
- F. Relief under this guidance shall not be available if the Department receives formal notification from the delegating federal agency of that agency's intention to propose rescission of the Department's authority over the applicable federal environmental program.

APPENDIX E

Supplemental Environmental Projects

A Supplemental Environmental Project (SEP) is an enforcement tool that augments traditional penalty actions. They are important because the projects provide direct environmental benefits to communities beyond those achieved by facilities returning to compliance. The Land and Materials Administration (LMA) was the only administration that made use of SEPs during FY19. LMA issued three SEPs during FY19 with a value of \$3,552,500. Details about each administration's SEPs are on the following pages.

Administration	Number of SEPs		Total Value of SEPs	
	2018	2019	2018	2018
Air and Radiation Administration	0	0	\$0	0
Land and Materials Administration	5	3	\$6,101,000	\$3,552,500
Water and Science Administration	0	0	\$0	\$0
TOTALS	5	3	\$6,101,000	\$3,552,500

Air and Radiation Administration SEPs, FY19

Total SEPs: 0
Total Value: \$0

Land and Materials Administration SEPs, FY19

Total SEPs: 3

Total Value: \$3,552,500

The Land and Materials Administration issued three SEPs in FY19 for lead enforcement cases. The SEPs required the property owners to take actions to reduce lead-based paint risks in the properties. The following table lists the individual SEPs.

Program	Case #	Property Owner	Description	SEP Value
Lead	17-30-23216	Realty Masterminds, LLC	6 - SEP, Units requiring to be certified as Lead Free (one time only).	\$60,000
Lead	18-10-24276	Housing Authority of the City of Frederick	200 – SEP, Units requiring to be certified as Lead Free (one time only).	\$2,000,000
Lead	18-16-24582	Carleton East Operating Co., LLC	597 – SEP, Units requiring to be certified as Limited Lead Free.	\$1,492,500

Water and Science Administration SEPs, FY19

Total SEPs: 0

Total Cost: \$0
