EXECUTIVE SUMMARY

The Maryland Used Oil Recycling Program (the Program) is administered by the Maryland Department of the Environment (MDE) through a memorandum of understanding (MOU) with the Maryland Environmental Service (MES). The authority for the Maryland Used Oil Recycling Program is found in Section 5-1001 of the Environment Article of the Maryland Annotated Code, the *Maryland Used Oil Recycling Act*.

MES is responsible for implementing a statewide program for the construction, operation, and routine maintenance of used oil collection facilities; providing public education and outreach programs related to the disposal of used oil; and maintaining an information center to educate citizens regarding the proper disposal of used oil. Additionally, MES utilizes the collection sites for the collection of related recyclables, including used antifreeze and used oil filters.

MES also administers funding for the purpose of implementing supplemental environmental projects. Specifically, this grant funding is used to assist in the construction of rain shelters to minimize stormwater contact with the used oil collection tanks and is also used to fund the purchase of above-ground storage tanks for new sites, as well as replacements for older sites.

Since 1988, the Program has resulted in the collection and recycling of over 20.7 million gallons of used oil in the State of Maryland. Similarly, the Program has accomplished the collection and recycling of over 1.1 million gallons of used antifreeze from Maryland do-it-yourself automobile and boating enthusiasts.

In 2024, 467,452 gallons of used oil and 31,134 gallons of used antifreeze were collected from Program sponsored locations. Additionally, during this period, 128 drums of used oil filters were collected for recycling.

Works

INTRODUCTION

The 2024 Maryland Used Oil Recycling Program Annual Report is provided to the Maryland General Assembly as required by Section 5-1001(g) of the Environment Article, the *Maryland Used Oil Recycling Act*.

The Maryland Used Oil Recycling Program (the Program) is administered by the Maryland Department of the Environment (MDE) through a memorandum of understanding (MOU) with the Maryland Environmental Service (MES). MES designates used oil collection facilities, offers technical and financial assistance to establish collection facilities, routinely inspects and cleans Program-sponsored facilities, provides public education, operates an information center, and implements other non-regulatory provisions of the *Maryland Used Oil Recycling Act*. MDE and MES are pleased to provide the following report detailing the accomplishments, initiatives, and progress of the Program during CY24, as well as plans for CY25.

BACKGROUND

The Program was created by the *Maryland Used Oil Recycling Act*, which was enacted in July 1978. Initial start-up funding for the Program was allocated from energy funds. This funding enabled the creation of a program to assist the home mechanic with properly used oil disposal. Farmers and boat owners at marinas also used these facilities for their oil recycling.

MES purchased oil collection tanks, collection boxes, hardware, and signs. County and local governments were solicited to assist in establishing convenient and accessible used oil collection sites for citizens. A variety of collection sites were established. Most are located at government owned solid waste, public works, and road maintenance facilities.

The Program has been successful at recruiting and maintaining donor locations for several reasons: 1) the Program assumes the responsibility for disposing of any contaminated used oil; 2) opportunity for the Program to provide financial assistance for tanks and shelters; and 3) no cost collections for participants.

2024 PROGRAM UPDATES AND ACCOMPLISHMENTS

Since its inception in 1988, the Program has expanded from 44 collection sites to the current 142 operational sites and has recycled more than 20.7 million gallons of used oil over this time period. The collection of used oil from all Program locations yielded 467,452 gallons of used oil in CY24. This was a 2.9 percent increase from the 454,396 gallons collected in 2023. Historical used oil and antifreeze annual collection results are summarized in graphs at the end of the report. Spreadsheets of the detailed used oil and antifreeze collection records for the participating Program sites are attached as well (Appendix A).

Key Updates and Accomplishments

- Collected and recycled 467,452 gallons of used oil.
 - Increase of 2.9% from 454,396 gallons in 2023.
- Collected and recycled 31,134 gallons of used antifreeze.
 - Increase of 36% from 22,869 gallons in 2023
- Collected and recycled 128 drums of used oil filters.
 - Decrease of 25% from 161 drums in 2023
- Frederick Recycle received a new used oil tank and maintenance upgrades on the existing tanks to resume the 1,000+ gallons of used oil recovered each week.
- Brunswick Public Works added another collection site with new tanks installed for used oil and antifreeze.
- Hancock Transfer Station received two new used oil tanks and antifreeze drums with a complete cleaning of the containment areas.
- Allegany County Transfer Station received new antifreeze drums.
- Somers Cove Marina upgraded the three recovery locations on-site with containment cleanings, new signs, stickers, oil level gauges, and tank paintings.
- New signs for acceptable and unacceptable materials were installed at multiple sites throughout the state, with new tank stickers at over fifty sites.
- Containment and tank cleanings at all sites in Prince George's, Carroll, Washington, Cecil, Frederick, Talbot, Kent, Somerset, and Dorchester Counties.
- Performed six (6) emergency cleanings of secondary containment areas due to spillage in Harford, Prince George's, and Talbot Counties.
- Performed five (5) major cleanings of containment areas and oil tanks (inner and outer) from spillage and sludge build-up in Frederick, Carroll, Washington, and Talbot Counties.
- Updated multiple sites with new spill pallets, level gauges, metal and magnetic signs and stickers, antifreeze drums, and oil tanks.
- Performed supplementary cleaning and maintenance at Program-sponsored locations during the year.
 - Eight (8) sites in Harford County were inspected and cleaned twice a week with monthly reports to County officials.
 - Tank repairs, replacement, and painting, major containment cleanings, and sign replacement at more than 50 sites.
 - Enhanced cleaning to continue in 2025 using the mobile cleaning unit.

©

Administration

The total cost for MES to implement the program in FY24 was \$244,065.41. The collection contract provides revenue per gallon for collected oil based on a federal commodity index. In FY24, the program was completely self-funded by commodity revenue.

Aberdeen Public Works

Operation and Maintenance

Good housekeeping is critical for spill control and to prevent contamination. As part of its management of the Program, MES has conducted on-site audits of all Program-sponsored collection facilities to ensure that sponsors, recycling coordinators, site supervisors, and site operational staff are aware of their pollution prevention responsibilities. Additionally, MES staff conducted routine cleaning and maintenance, as necessary, to assist the site hosts in maintaining environmental compliance. During CY24, MES performed supplementary cleaning and maintenance at the vast majority of Program sponsored locations.

To reduce costs associated with cleaning and water recovery completed by private contractors, MES developed a mobile cleaning trailer for use at oil collection sites. The trailer, equipped with a power washer, water tanks, and a water recovery system, allows MES staff to thoroughly clean collection sites and recover the resulting oily water. The mobile cleaning trailer was deployed throughout CY24 for enhanced cleanings and oily water recovery, resulting in significant savings to the used oil program when compared to 3rd party contractor cleanings.

MES continually reminds all site hosts that they are responsible for providing day-to-day monitoring and housekeeping of the tanks. MES staff provides assistance with housekeeping and compliance as needed, based on the results of the routine site inspections. MES maintains a small full-time staff to conduct routine site audits and assist with site maintenance and cleaning. Sites are upgraded, as needed, to improve capacity or operational performance.

Given the concern over proper disposal of used oil, contaminated oil, and unauthorized dumping of trash and hazardous materials, MES continues to urge site hosts to remain in the Program. Because used oil can be easily contaminated with polychlorinated biphenyls, brake cleaning fluids, and other readily accessible chemicals, MES and MDE concur that citizens are better served by local governments staying within the established Program.

Public Outreach

MES and MDE each maintain a webpage with information related to the Program:

MES's webpage - menv.com/service/used-oil-antifreeze-recycling/

MDE's webpage - mde.maryland.gov/programs/Land/OilControl/Pages/UsedOilProgram.aspx

From the MES webpage, Marylanders can find the public information number **800-4RECYCLE** (800-473-2925) and an email address to inquire about the proper disposal of used oil and antifreeze. MES also has a listing of collection sites by county. Hundreds of calls were made to the public information number in 2024, with most callers requesting information on used oil collection locations and the proper disposal/recycling of waste materials.

During CY24, information was provided to the public about the importance of proper handling, disposal, and recycling of used oil and antifreeze via social media and websites.

PLANNED ACTIVITIES FOR 2025

THE FOLLOWING ACTIVITIES ARE PLANNED FOR THE PROGRAM IN CY25, CONDITIONAL ON THE AVAILABILITY OF APPROVED FUNDING.

Administration

- Continue to fund the Program if oil collection revenue does not cover Program costs.
- Continue to implement the Program.
- Manage the oil collection subcontract to ensure conformance with contract terms and conditions.
- Continue the grant program providing financial assistance to upgrade existing sites.

Operation and Maintenance

- Continue annual inspections of participating sites to ensure continued protection of the environment.
- Continue the routine maintenance and cleaning program.
- Continue the tank upgrade program by replacing single-wall 275-gallon tanks with new double-wall tanks.
- Explore ways to improve automated monitoring of participating sites to deter abuse of the facilities.

Public Outreach

- Continue updating and linking the used oil recycling pages at www.menv.com.
- Continue public outreach and education at local county events.
- Send annual program reports to statewide solid waste managers and recycling coordinators.
- Continue membership in the Association of Responsible Recyclers while updating Program participants and citizens with current information, issues, and trends within the industry.
- Explore additional ways to market the Program to the public.
