EXECUTIVE SUMMARY

EXECUTIVE SUMMARY

Maryland House Bill 270 (HB 270 and later Chapter 386), passed by Governor Hogan during the 2017 legislative session, provided a framework to reduce Maryland school children's exposure to lead in drinking water. HB 270 directed the Maryland Department of the Environment (MDE), in consultation with the Maryland State Department of Education (MSDE), the Department of General Services (DGS), and the Maryland Occupational Safety and Health (MOSH), to adopt regulations to require periodic testing for the presence of lead in each drinking water outlet located in an occupied public or nonpublic school building. The law required MDE to establish a stakeholder group and to gather information about the testing processes, protocols, and efforts undertaken by schools to test for and remediate lead. The law also required MDE, in consultation with MSDE, to provide a mechanism to grant waivers from testing to schools under certain circumstances. Furthermore, on or before December 1, 2018 and each year thereafter, MDE and MSDE must jointly report to the Governor on the findings of the lead testing conducted by schools.

Maryland House Bill 1253 (HB 1253 and later Chapter 557), passed by Governor Hogan during the 2019 legislative session, strengthened the lead protection measures established in HB 270 by setting a lead level of no more than 5 parts per billion (ppb) as a goal for schools to work toward. The law also provided a funding mechanism for schools to remediate drinking water outlets that exceeded this level, and expanded the information that must be reported to the Governor.

This report, which will be made available to Maryland citizens through MDE's website, details the second year of Maryland's program for lead testing in the drinking water for public and nonpublic schools, and the progress made toward identifying and reducing exposure to lead through drinking water in schools; it summarizes activities for the period of July 2, 2018, when the second phase of lead testing began, through July 1, 2019, when the second phase of lead testing ended. This report presents the findings of the lead testing in schools serving children in prekindergarten through grade 5, and/or school buildings built before 1988 that were granted a 12-month deferral from initial lead testing, schools serving children in grades 6 through 8, and built 1988 or later, and schools serving children in grades 9 through 12 that were built 1988 or later that have elected to test early. The report also includes information from schools that otherwise were to have conducted initial testing during the first phase, but did so instead during the second reporting period.

MDE received over 26,000 lead sample results from 605 schools (503 public schools, four charter schools, and 98 nonpublic schools) that had completed testing between July 2, 2018, and July 1, 2019. Approximately 5.3% of these had elevated levels of lead (i.e., greater than 20 ppb). When outlets used for drinking, food preparation, or cooking are found to have elevated levels of lead in the water, immediate removal from service is required.

During this reporting period, MDE also received 42 applications for deferrals from initial testing for middle schools built 1988 or later, and three applications for waivers.

Through continued testing and remediation, Maryland's goal is to reduce the occurrence of elevated lead in water to zero, thereby reducing exposure to lead in the drinking water of approximately 1 million children who rely on water provided by Maryland's 3,000 public and nonpublic schools.

BACKGROUND

BACKGROUND

This report summarizes the lead testing results of drinking water samples collected during the 2018-2019 school year at Maryland's public and nonpublic schools; it has been prepared for the Governor in accordance with Section 6-1502(E) of the Environment Article of the Annotated Code of Maryland.

[House Bill 270](#) was signed into law by Governor Hogan on May 4, 2017, and became effective on June 1, 2017. The law directed:

- MDE, in consultation with MSDE, DGS, and MOSH, to adopt regulations requiring periodic testing for lead in each drinking water outlet located in an occupied public or nonpublic school building;
- MDE to establish a stakeholder group to provide advice and make recommendations regarding the development of the regulations;
- MDE to gather information about the testing processes, protocols, and efforts undertaken by county school systems and nonpublic schools to establish a safe and lead-free environment, including the status of testing plans and any resultant remedial measures;
- MDE, in consultation with MSDE, to provide a mechanism to grant waivers from testing to schools under certain circumstances;
- The initial round of sampling to be completed by July 1, 2018; and
- MDE and MSDE to jointly report to the Governor by Dec. 1, 2018, and on or before December 1 each year thereafter, on the findings of the lead testing conducted by schools.

The above requirements were completed as directed, and the regulations became effective on April 9, 2018.

On May 22, 2018, [MDE's webpage](#) for this initiative was launched. The webpage includes the following: Frequently Asked Questions; summaries of the findings of the testing (updated on a routine basis); links to the laws, regulations, and written comments on the proposed regulations, guidance materials, including sampling instructions and the training presentation that MDE provided in spring 2018; educational materials; forms, templates, and applications for waivers and deferrals; a list of state-certified laboratories, and other helpful information.

MDE has contracted with an outside vendor, 120WaterAudit, to provide software to track the lead in drinking water sampling data, school inventory information, deferrals, waivers, public notification, and remediation. This software will streamline the reporting process for schools by allowing schools to report data to one location that can be shared among the various state and local agencies that are required to receive and review such data. MDE is also working with the Maryland Department of Health (MDH) to provide a map-based presentation of the lead sample results throughout the state.

NEW LEGISLATION

NEW LEGISLATION

Maryland House Bill 1253, passed during the 2019 legislative session, contained a provision allowing monies in the state's Healthy School Facilities Fund (HSFF) to be used by local school systems to address lead in drinking water exceeding a concentration of 5 ppb. The law also directs the Governor to contribute \$30 million to the fund in FY20 and FY21. Additionally, the law directs MDE, in consultation with MSDE, to establish a program to provide grants to local school systems to implement remedial measures to address lead concentrations exceeding 5 ppb in drinking water in school buildings. Once implemented, both initiatives should assist local school systems in reducing the occurrence of lead levels in drinking water exceeding 5 ppb.

REGULATION IMPLEMENTATION

REGULATION IMPLEMENTATION

The [regulations](#), effective on April 9, 2018, require all occupied public and nonpublic schools, serving children in prekindergarten to grade 12, that receive drinking water provided by a public water utility, to test for the presence of lead in all drinking water outlets. Testing is to be conducted every three years and must be performed during the regular school year while school is in session. As specified in the law, testing is phased in based on the age of the students and the age of the school buildings; schools serving the youngest students (younger children are more vulnerable to the health effects of lead) and school buildings built before the federal lead ban are the highest priority. The regulations also provide a mechanism for schools to defer the initial sampling for either 12 months or three years, and schools may also waive out of testing altogether if specific criteria is met, as set forth in law.

The regulations require that all drinking water outlets in a school building be tested for lead in accordance with specific [sampling procedures](#). If testing reveals that an outlet has an elevated level of lead (greater than 20 ppb), schools must immediately remove all access to that outlet until it can be remediated, replaced, or permanently removed from service.

Outlets in schools are prioritized according to use – all outlets that provide water for drinking, cooking, or food preparation must be tested for lead. Outlets that are not used for consumption are not required to be tested for lead; however, they must be clearly labeled with signs indicating that the water is not to be used for consumption. Schools must notify students, parents and staff of any elevated levels of lead. As directed by HB 270, the regulations follow the guidance in the U.S. Environmental Protection Agency’s (EPA) *3Ts for Reducing Lead in Drinking Water in Schools*, for standards, including sampling procedures, action level, and outlet prioritization.

The regulation provides for deferral of initial testing under specific conditions. MDE, in consultation with MSDE, may grant a deferral not to exceed 12 months from the initial due date if a school has a plan in place for testing all drinking water outlets, as well as a plan detailing actionable steps to be taken if elevated levels of lead are found in a sample from any drinking water outlet. Also, in consultation with MSDE, MDE may grant a school a deferral not to exceed three years from the initial due date if the school has completed testing for all drinking water outlets in the school in accordance with the regulations, and no test results exceed the action level (AL) of 20 ppb.

A waiver from future testing may be granted by MDE in consultation with MSDE under certain specific situations:

- *Type 1, Prior Testing*: All drinking water outlets tested for lead no earlier than five years before the effective date of the regulations, and every test result for every sample collected was 5 ppb or lower;

- *Type 2, Bottled Water:* Students in the building do not have access to piped water from any drinking water outlet, and bottled water that meets all National Primary Drinking Water standards is the only source of water for drinking and food preparation; or
- *Type 3, Lead-Free Building:* The service line, all plumbing connecting the school to the water main, and all interior plumbing in the school building is certified to be lead-free.

Unless the school has been granted a waiver as described above, it must repeat testing every three years. Schools granted deferrals must repeat testing three years from the initial date as stipulated in the regulation (i.e., not three years from the deferred due date). Newly constructed schools put into service after the effective date of this regulation must complete initial testing within 12 months of occupancy.

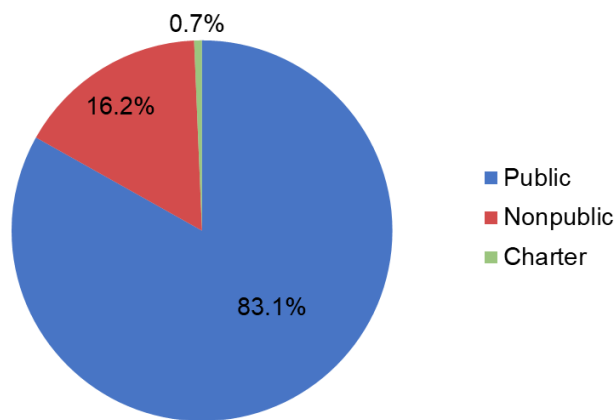

MARYLAND'S LEAD TESTING PROGRAM: 2018 – 2019 SCHOOL YEAR

Testing Results

The second phase of statewide testing ended July 1, 2019. Schools for which the required initial testing was to be completed by July 1, 2019 include (1) all schools in buildings constructed after 1988, and serving students age grade 6 through grade 8, and (2) all schools that received a 12-month deferral and otherwise were to have conducted initial testing during the first phase of the initiative (i.e., on or before July 1, 2018). The latter group of schools includes all schools in buildings constructed before 1988, and all schools serving students age prekindergarten through grade 5, regardless of the age of the buildings. Schools with overlapping age groupings are required to test by the earliest specified date. It should be noted that there are some schools that completed their testing by July 1, 2019, even though their initial testing due date may have been July 1, 2020; the test results of those schools are included in the current reporting cycle.

A total of 605 schools completed testing during the reporting period ending July 1, 2019, in accordance with the requirements of COMAR 26.16.07.07. Of these, 503 (83.1%) were public schools, four (0.7%) were charter schools, and 98 (16.2%) were nonpublic schools (see Figure 1 below). Names and locations of schools completing testing are presented in Tables 1 through 3, located in Appendix C.

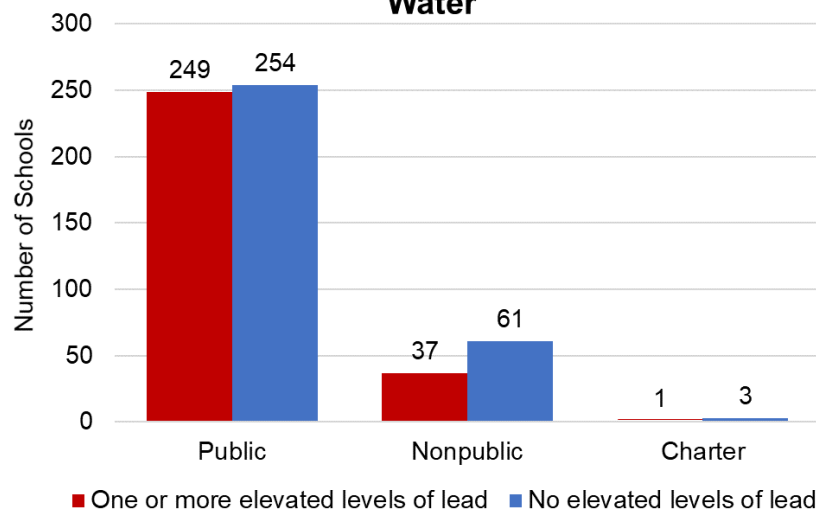

Figure 1: Schools Completing Lead Testing by July 1, 2019

Elevated levels of lead (above the AL of 20 ppb) were found at 287 of the 605 schools completing lead testing by July 1, 2019. There were 249 public schools with elevated results, one charter school, and 37 nonpublic schools with elevated results (see Figure 2 below). Of the 26,268 outlets tested in accordance with the first-draw sampling procedures outlined in the regulations, elevated levels of lead were found at a total of 1,405 outlets (5.3%). Consumption

outlets (i.e., outlets used for drinking, cooking, or food preparation) accounted for 628 (44.7%) of the elevated results, while 777 (55.3%) were non-consumption outlets (i.e., outlets used only for purposes other than consumption and not required to be tested). Elevated levels of lead were most frequently found in classroom sinks (46.0% of the total), followed by drinking water fountains (18.1%) and bathroom sinks (12.6%); kitchen sinks and home economics classroom sinks comprised 6.7%, and 2.7% of elevated outlets, respectively. A complete list of all outlets found to have elevated levels of lead, including the type, use, location and lead level of the outlet, is presented in tabular form in Tables 10, 11, and 12 located in Appendix F.

Figure 2: Schools Reporting Elevated or Nonelevated Levels of Lead in Drinking Water

Deferrals

Schools may apply to defer initial sampling, a provision included in both the law (as a waiver) and regulations, either by 12 months or by three years.

A total of 26 applications for 12-month deferrals were received and approved from schools that were required to complete initial testing by July 1, 2019. Of these, 21 were from public schools and five were from nonpublic schools. Full details are presented in Appendix G.

Many schools had already completed some testing for lead in drinking water prior to the enactment of Maryland Chapter 386. The provision for three-year deferrals is intended to allow schools that had already tested in a manner consistent with HB 270's requirements additional time before they needed to collect additional samples. Sixteen schools – 10 public, two charter, and four nonpublic – that were scheduled for lead testing by July 1, 2018, or by July 1, 2019, applied for three-year deferrals. To date, no three-year deferrals have been granted. Full details are presented in Appendix G.

Waivers

A total of 134 schools that were scheduled for lead testing either by July 1, 2018, or by July 1, 2019, have applied for waivers: thirteen schools applied for “prior testing” (type 1) waivers; 115 schools applied for “bottled water” (type 2) waivers, and six schools applied for “lead-free building” (type 3) waivers. To date, MDE has not granted any waivers. Eight applications for “prior testing” waivers, 107 applications for “bottled water” waivers, and one application for “lead-free building” waiver have been denied, and the remaining applications are under review. Details are presented in Appendix H.

Successes

Convening a Stakeholder Advisory Group proved to be very valuable. The advice and recommendations from school personnel, laboratory personnel, nonpublic school umbrella associations, and members of the General Assembly ensured that the regulations developed were comprehensive, effective and workable. Information gathered in a survey of public schools and nonpublic schools enabled MDE and MSDE to identify strengths and weaknesses of prior testing that had been conducted by schools, allowing us to better target our limited resources.

The six [training sessions](#) held in spring 2018 were useful in minimizing issues such as sampling errors and incomplete paperwork. The training covered all aspects of implementation of the new law, including sampling and laboratory protocol, paperwork, notification requirements, remediation, and applying for deferrals and waivers. Attendees described the sessions as very helpful.

Direct electronic reporting of lead sample results, available to schools and laboratories beginning in May 2019, is helping to streamline the reporting process and allows for lead sample results to be viewed almost immediately by state and local agencies. In addition, an interactive, Geographic Information System (GIS)-based map view of the lead sample results has been tested and will be available soon. This new feature will allow the public a simple way to view lead sample results for schools throughout Maryland.

During the second reporting cycle, over 26,000 drinking water outlets were tested for lead, of which 1,405 (5.3%) were found to have elevated levels of lead. Those identified as consumption taps were required to be immediately removed from service until they can be remediated, replaced, or permanently removed from service. Outlets identified as non-consumption taps were remediated, replaced, permanently removed from service, or signed as not a drinking water outlet, as required. Notification of students, parents, and school staff was required for any outlet with an elevated level of lead (20 ppb), regardless of whether the outlet was identified as consumption or non-consumption.

Challenges

Many schools and school systems have indicated that the lack of funding available for lead testing required under Maryland Chapter 386, presented a challenge. In addition, for new or

recently constructed or renovated schools seeking a waiver based on a “lead-free” building, the expense incurred to receive the proper certification for a waiver from a licensed master plumber or professional engineer/architect may exceed that of testing; it may be that it is easier for truly “lead-free” schools to conduct a round of testing and then apply for a “prior testing” (type 1) waiver.

The reporting of lead sample data proved to be a challenge for many schools. In order to standardize the lead sample results and ancillary data for import into a data tracking system, MDE developed a template in Excel. This template was replaced in May 2019 with a new version that allows for direct electronic reporting of lead sample data. This change in format and procedure presented a challenge for many schools and laboratories. In some cases, laboratories were able to populate the spreadsheet; in other cases, however, school personnel had to type this information into the spreadsheet themselves, resulting in an increased workload. Additionally, the potential for error in transcription during manual data entry is concerning. We expect this issue to be less of a problem as the program matures, and schools and laboratories become more familiar with the process. Laboratories have already developed methods to transfer data from their format to the new format and have assisted schools in their reporting.

Conclusion

Although Maryland’s program for lead testing in drinking water in schools is still in its infancy, the results so far are promising: a total of 503 public schools, four charter schools, and 98 nonpublic schools successfully completed testing for lead in their drinking water during the second reporting year of this new initiative, which ended on July 1, 2019. With the completion of this second phase, most applicable schools serving students in prekindergarten through grade 8 have now completed at least one round of testing.

As Maryland’s testing program matures, schools will continue to identify, remove from service, and remediate outlets showing elevated levels of lead. With the strengthening of this initiative via the passage of House Bill 1253, schools will also begin to address outlets exhibiting lead concentrations over 5 ppb. Overall, this constitutes a significant reduction in environmental exposure to lead for approximately 1 million children in Maryland who depend on drinking water provided by the nearly 3,000 public and nonpublic schools in the state.

APPENDIX A

Glossary

Action Level - A level of lead which, if exceeded, requires the school to complete steps including remedial action, notification, and follow-up sampling.

Bottled water - Water that is intended for human consumption and that is sealed in bottles or other containers and meets the National Primary Drinking Water regulations for all regulated contaminants.

Certified Laboratory - A laboratory certified by the Maryland Department of the Environment to analyze drinking water samples for lead.

Deferral - An extension in the time a school is allowed to complete initial testing.

Department - The Maryland Department of the Environment (MDE).

Drinking water outlet - A potable water fixture that is used for drinking or food preparation.

Drinking water outlets include:

- a. Drinking fountains (DF), including both bubbler and water cooler styles;
- b. Ice-making machines (IM);
- c. Hot drink machines (HD);
- d. Kitchen sinks (KS);
- e. Classroom combination sinks with drinking fountains (CF);
- f. Sinks in home economics classrooms (HE);
- g. Teachers' lounge sinks (TL);
- h. Nurse's office sinks (NO);
- i. Sinks in special education classrooms (SE);
- j. Any other sink known to be used for human consumption (OT).

NOTE: *Drinking water outlet does not include an outlet clearly signed as not a drinking water outlet.*

Elevated level of lead - A lead concentration in drinking water that exceeds the concentration of 20 parts per billion (ppb) in a 250 milliliter (mL) first-draw sample, as recommended by the EPA in technical guidance documents for schools, including "3Ts for Reducing Lead in Drinking Water in Schools (2006)."

First-draw sample (FD) - A 250 mL sample of tap water that has been standing in plumbing 8 to 18 hours and is collected without flushing the tap.

Flushed sample (FL) - A 250 mL sample of tap water that has been drawn from an outlet immediately after the outlet has been run for at least 30 seconds. Flushed samples are collected after all first-draw samples within the building have been collected.

Lead-free - Plumbing that meets the definition of “lead-free” as defined by the Annotated Code of Maryland, Business Occupations and Provisions Article, §§12-101, 12-605.1, and 12-605.2.

MDH - The Maryland Department of Health.

MSDE - The Maryland State Department of Education.

Nonpublic school - An elementary or secondary school, other than a public school, offering education for prekindergarten through grade 12 wherein any child may legally fulfill compulsory school attendance requirements.

Public School - A school, including a charter school that is maintained at public expense for the education of the children of a community or district and constitutes a part of a system of free public education for prekindergarten through grade 12.

School - An individual school or a school system.

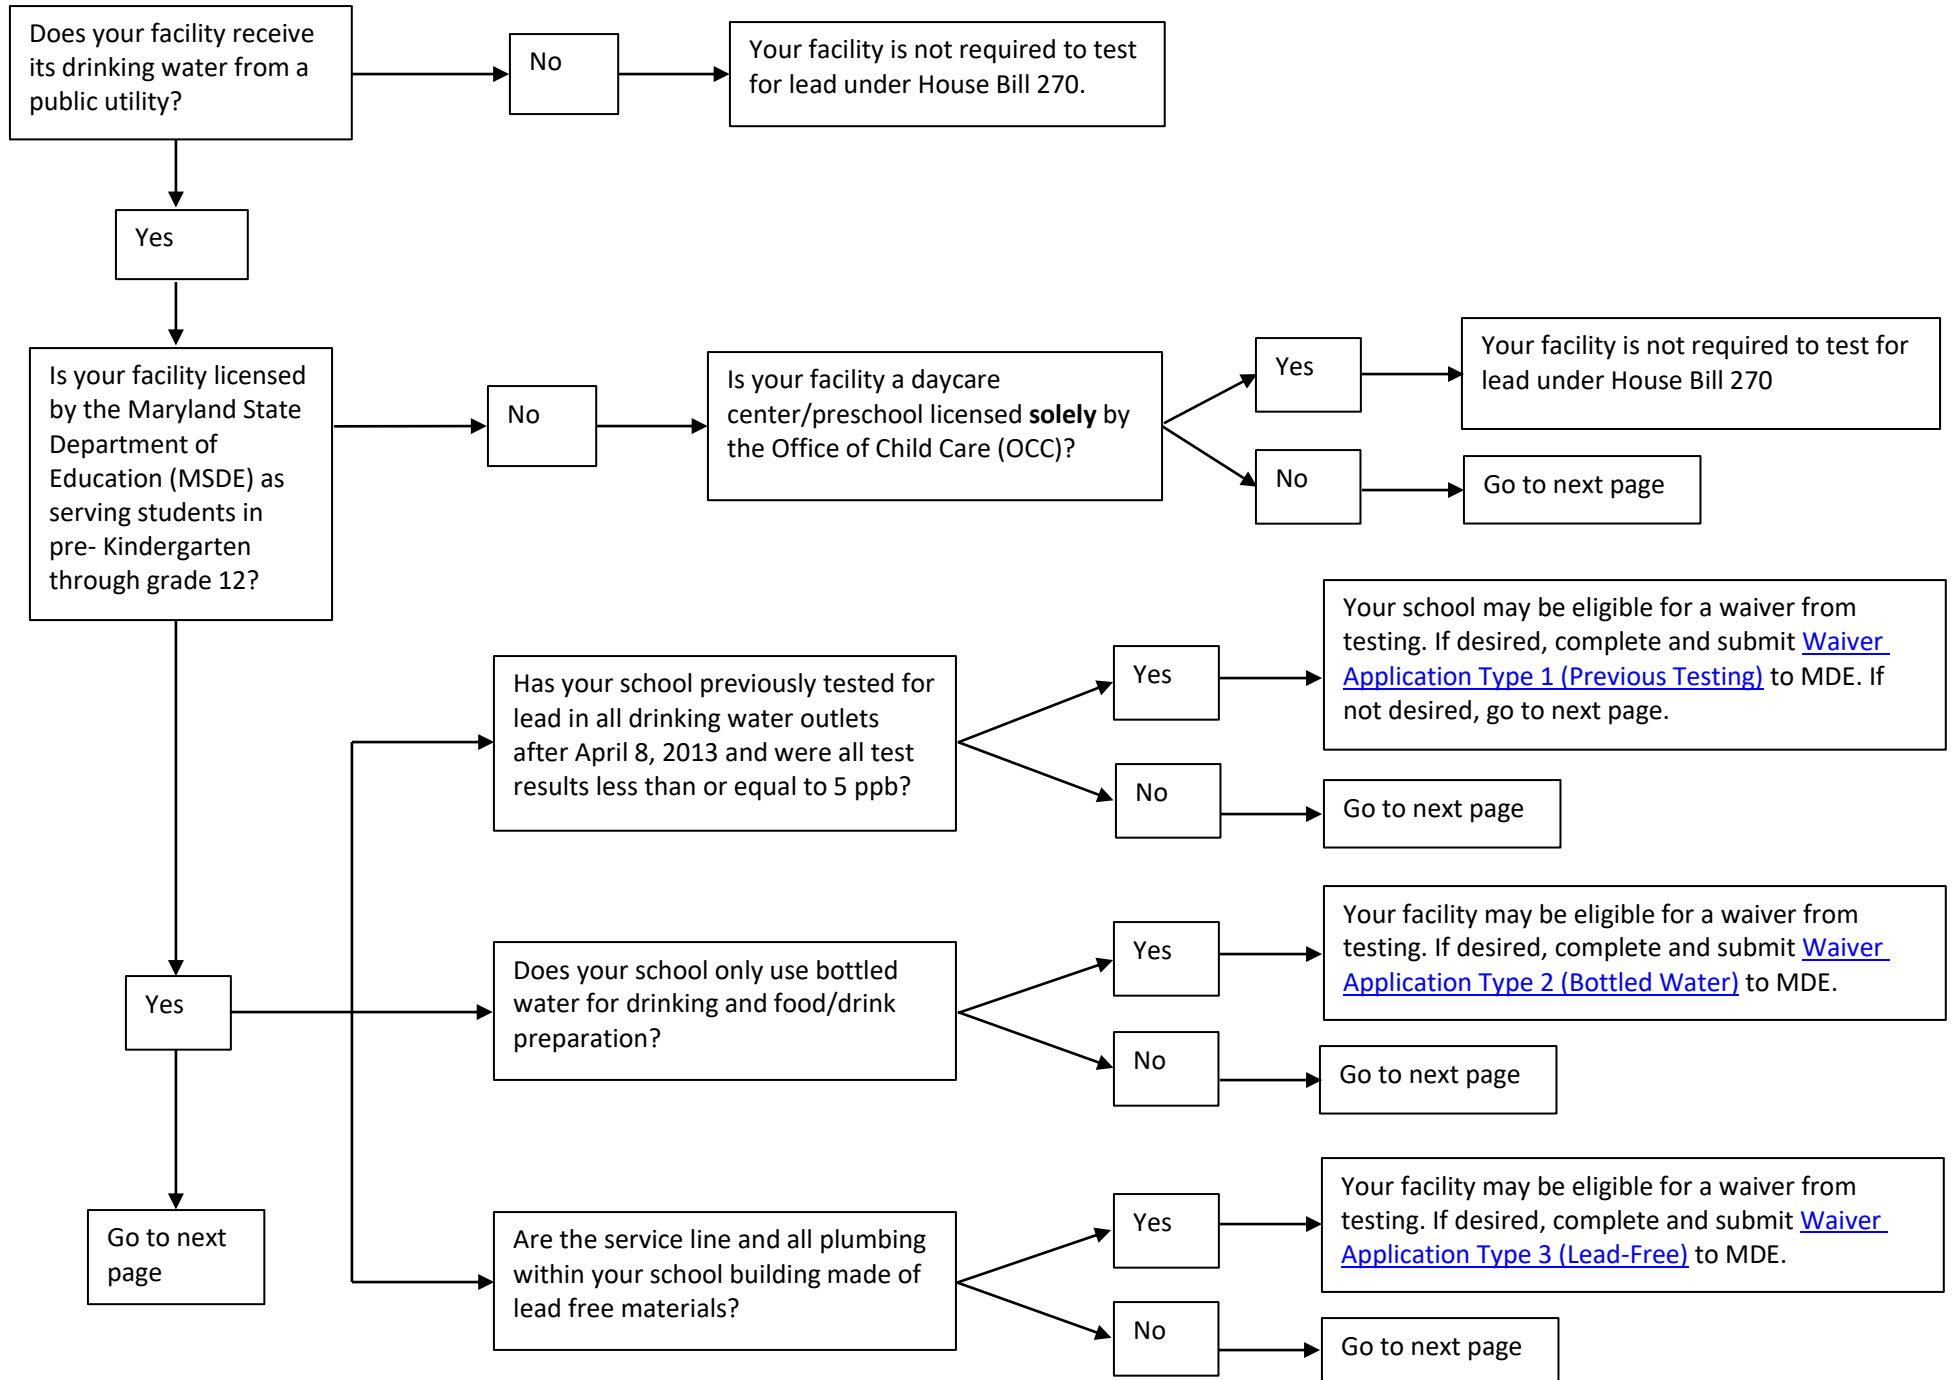

School day - Any day on which school is in session.

School building - Any structure, facility, addition, or wing of a school that may be occupied by children or students prekindergarten to grade 12. This does not include buildings used solely for administrative purposes.

Technical Guidance - The most recent technical guidance documents issued by EPA for reducing lead in drinking water in schools, such as the “3Ts for Reducing Lead in Drinking Water in Schools” (2006) and any subsequent technical guidance documents issued by EPA for reducing lead in drinking water in schools.

Waiver - An indefinite exemption from testing.

APPENDIX B: Flow Chart

Test all outlets used for drinking water and food/drink preparation, including ice machines and hot drink machines and submit samples to laboratory for analysis within 14 days of sample collection. Any outlet that is not tested must have [signage](#).

Are all test results less than or equal to 20.4 ppb?

Yes

Report all test results to MDE, MSDE, and your local health department within 30 days of samples being analyzed by the laboratory, using the following forms:

- [Sample Collection Form](#)
- [Laboratory Results Reporting Form](#)
- Official laboratory report signed by the Laboratory Director

Certify to MDE, MSDE, and the appropriate local health department that all drinking water outlets were tested in accordance with the regulation and provide other required information using the [Lead Sample Summary Certification Form](#) within 30 days after the samples were analyzed or 30 days after the end of the school calendar year in which the samples were collected.

Are all test results less than or equal to 5.4 ppb?

No

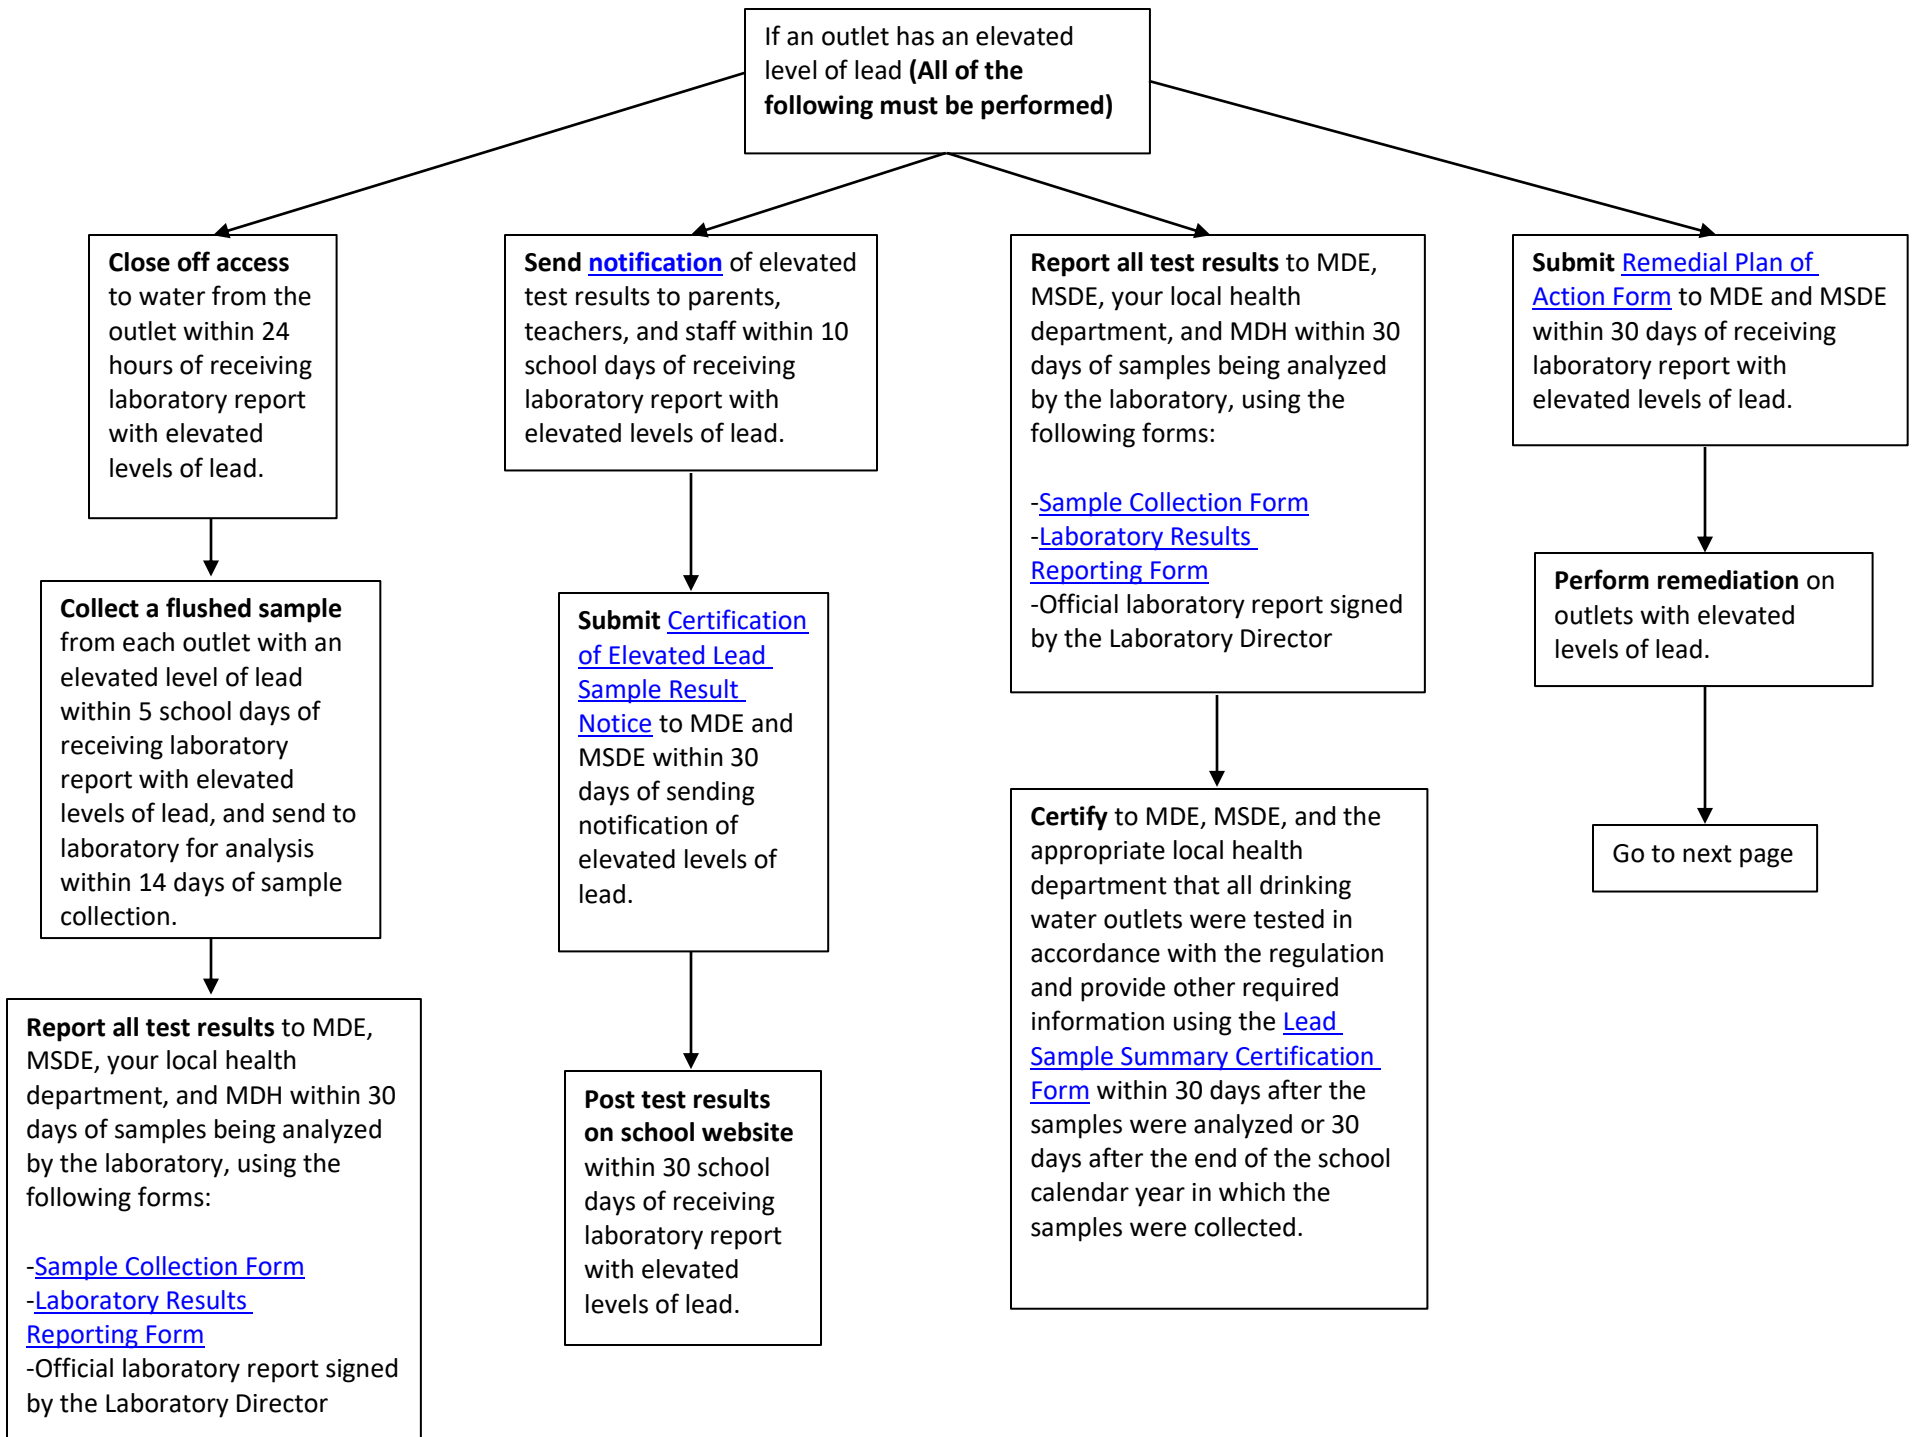

Yes

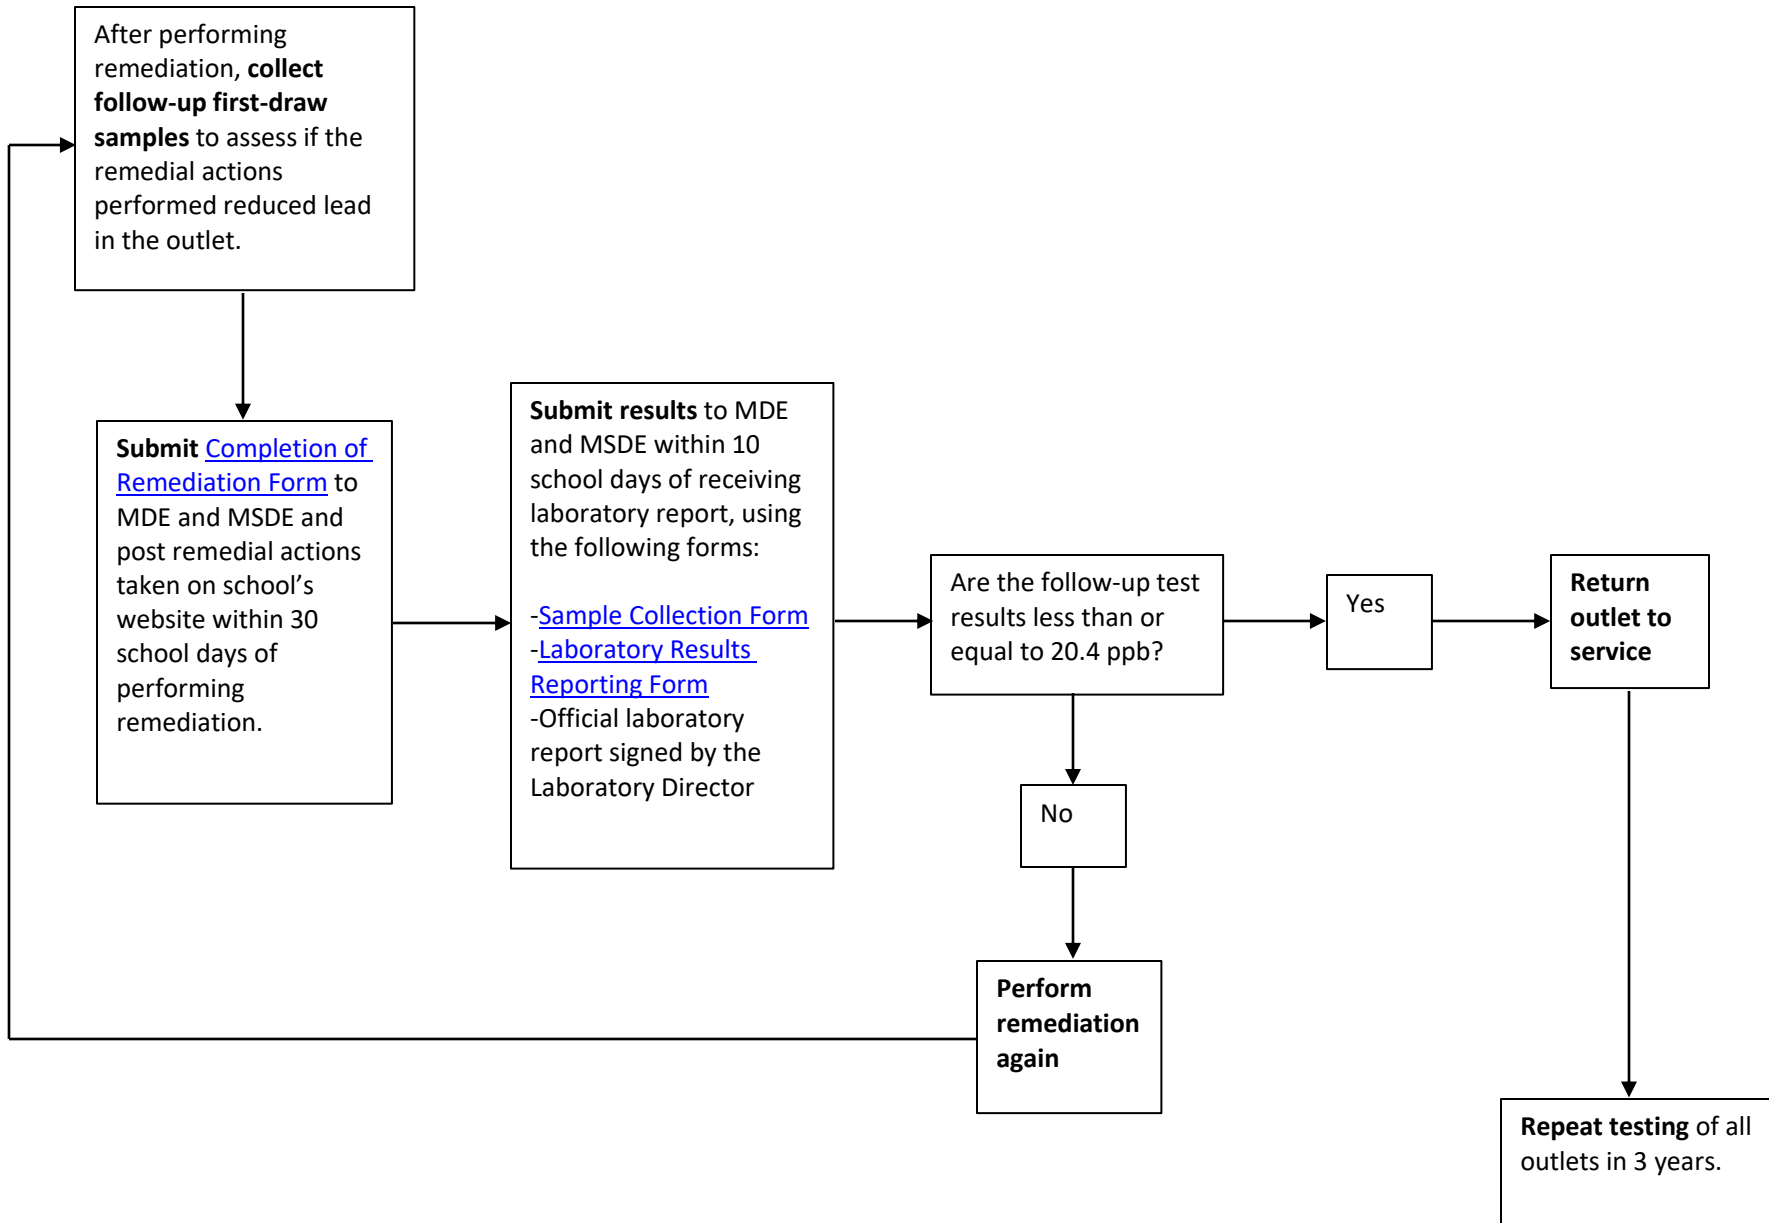

No

Go to next page

Your facility may be eligible for a waiver from future testing. If desired, **complete and submit** [Waiver Application Type 1](#) to MDE and MSDE. If not desired, repeat testing in 3 years.

Repeat testing in 3 years.
