EXECUTIVE SUMMARY

EXECUTIVE SUMMARY

During the 2017 legislative session, Maryland House Bill 270 (HB 270) passed and was signed into law by Governor Hogan, which provided a framework to reduce Maryland school children's exposure to lead in drinking water. HB 270 directed the Maryland Department of the Environment (MDE), in consultation with the Maryland State Department of Education (MSDE), the Maryland Department of General Services (DGS), and the Maryland Occupational Safety and Health (MOSH), to adopt regulations to require periodic testing for the presence of lead in each drinking water outlet located in an occupied public or nonpublic school building. The law required MDE to establish a stakeholder group and to gather information about the testing processes, protocols, and efforts undertaken by schools to test for and remediate lead. The law also required MDE, in consultation with MSDE, to provide a mechanism to grant waivers from testing to schools under certain circumstances. Furthermore, on or before Dec. 1, 2018, and each year thereafter, MDE and MSDE must jointly report to the Governor and the Maryland General Assembly on the findings of the lead testing conducted by schools.

During the 2019 session, HB 1253 passed and was signed into law by Governor Hogan, which strengthened the lead protection measures established in HB 270 by setting a lead level of no more than 5 parts per billion (ppb) as a goal for schools to work toward. The law also provided a funding mechanism for schools to remediate drinking water outlets that exceeded this level, and expanded the information that must be reported to the Governor and the Maryland General Assembly.

This report, which will be made available to Maryland citizens through MDE's website, details the third year of Maryland's program for lead testing in the drinking water for public and nonpublic schools and the progress made toward identifying and reducing exposure to lead through drinking water in schools. Additionally, this report summarizes activities for the period of July 2, 2019, when the third phase of lead testing began, through July 1, 2020, when the third phase of lead testing ended. Two main categories of schools were required to conduct testing during this period: schools serving children in grades 9 through 12 that were built 1988 or later and schools serving children in grades 6 through 8 that were built 1988 or later and were granted a 12-month deferral from initial lead testing.

Over 380 schools submitted results of lead samples collected during this reporting period (i.e., between July 2, 2019, and July 1, 2020). Of these schools, MDE was able to review results from 340 schools (331 public schools, one charter school and eight nonpublic schools). Review of the remaining schools' results is ongoing due to insufficient documentation, data validation, and other challenges. Over 8,700 samples collected from 339 schools (331 public schools, one charter school and seven nonpublic schools) were determined to be valid (i.e., were collected and analyzed in accordance with [Code of Maryland Regulations \(COMAR\) 26.16.07.07](#)). Approximately 3.6% of these samples had elevated levels of lead (i.e., greater than 20 ppb). When outlets used for drinking, food preparation, or cooking are found to have elevated levels of lead in the water, immediate removal from service is required.

Through continued testing and remediation, Maryland's goal is to eliminate any occurrence of elevated lead in school drinking water, thereby reducing exposure to lead in the drinking water of approximately 1 million children who rely on water provided by Maryland's 3,000 public and nonpublic schools.

BACKGROUND

BACKGROUND

This report summarizes the lead testing results of drinking water samples collected during the 2019-2020 school year at Maryland's public and nonpublic schools; it has been prepared for the Governor in accordance with Section 6-1502(E) of the Environment Article of the Annotated Code of Maryland.

[HB 270](#) was signed into law by Governor Hogan on May 4, 2017, and became effective on June 1, 2017. The law directed:

- MDE, in consultation with MSDE, DGS, and MOSH, to adopt regulations requiring periodic testing for lead in each drinking water outlet located in an occupied public or nonpublic school building;
- MDE to establish a stakeholder group to provide advice and make recommendations regarding the development of the regulations;
- MDE to gather information about the testing processes, protocols, and efforts undertaken by county school systems and nonpublic schools to establish a safe and lead-free environment, including the status of testing plans and any resultant remedial measures;
- MDE, in consultation with MSDE, to provide a mechanism to grant waivers from testing to schools under certain circumstances;
- The initial round of sampling to be completed by July 1, 2018; and
- MDE and MSDE to jointly report to the Governor by Dec. 1, 2018, and on or before December 1 each year thereafter, on the findings of the lead testing conducted by schools.

MDE conducted six training sessions throughout the state during spring 2018. The regulations became effective on April 9, 2018. On May 22, 2018, [MDE's webpage](#) for this initiative was launched. The webpage includes the following:

- Frequently Asked Questions;
- Summaries of the findings of the testing (updated on a routine basis);
- Links to the laws, regulations, and written comments on the proposed regulations, guidance materials, including sampling instructions, a flow chart, and the training presentation that MDE provided in spring 2018;
- Educational materials;
- Forms, templates, and applications for waivers and deferrals;
- A list of state-certified laboratories; and
- Other helpful information.

In August 2018, MDE contracted with a vendor, to provide software to track the lead in drinking water sampling data, school inventory information, deferrals, waivers, public notification, and remediation. This software streamlined the reporting process for schools by allowing schools to report data to one location that can be shared among the various state and local agencies that are required to receive and review such data. MDE continues to work with the Maryland Department of Health (MDH) to provide a map-based presentation of the lead sample results throughout the state.

UPDATES TO LEGISLATION

Maryland HB 1253 (2019) directs MDE, in consultation with MSDE, to establish and administer a grant program to assist local school systems with the costs associated with implementing remedial measures to address elevated lead levels in drinking water outlets in school buildings, using any federal funding received by MDE or MSDE for this purpose. Once funded and established, this program will also help in reducing the occurrence of elevated lead levels in drinking water in public schools. To date, no such federal funding has been received and the grant program has not yet been established. Additionally, HB 1253 contained a provision to expand the Healthy School Facilities Fund (HSFF) to provide assistance to local school systems in reducing the occurrence of lead levels in drinking water exceeding 5 ppb. In FY20 and FY21, Governor Hogan allocated \$30 million to the fund.

REGULATION IMPLEMENTATION

REGULATION IMPLEMENTATION

In 2018, MDE established [regulations](#) (COMAR 26.16.07) requiring all occupied public and nonpublic schools that serve children in prekindergarten to grade 12 receive drinking water provided by a public water utility to test for the presence of lead in all drinking water outlets. Testing is to be conducted every 3 years and must be performed during the regular school year while school is in session. As specified in the law, testing is phased in based on the age of the students and the age of the school buildings; schools serving the youngest students (younger children are more vulnerable to the health effects of lead) and school buildings built before the federal lead ban (1978) are the highest priority. The regulations also provide a mechanism for schools to defer the initial sampling for either 12 months or 3 years, and schools may also waive out of testing altogether if specific criteria are met, as set forth in law.

The regulations require that all drinking water outlets in a school building be tested for lead in accordance with specific [sampling procedures](#). If testing reveals that an outlet has an elevated level of lead (greater than 20 ppb), schools must immediately remove all access to that outlet until it can be remediated, replaced, or permanently removed from service.

Outlets in schools are prioritized according to use – all outlets that provide water for drinking, cooking, or food preparation must be tested for lead. Outlets that are not used for consumption are not required to be tested for lead; however, they must be clearly labeled with signs indicating that the water is not to be used for consumption. Schools must notify students, parents/guardians, and staff of any elevated levels of lead. As directed by HB 270, the regulations follow the guidance in the U.S. Environmental Protection Agency’s (EPA) *3Ts (Training, Testing, and Taking Action) for Reducing Lead in Drinking Water in Schools*, for standards, including sampling procedures, Action Level (AL), and outlet prioritization.

The regulation provides for deferral of initial testing under specific conditions. MDE, in consultation with MSDE, may grant a deferral not to exceed 12 months from the initial due date if a school has a plan in place for testing all drinking water outlets, as well as a plan detailing actionable steps to be taken if elevated levels of lead are found in a sample from any drinking water outlet. Also, in consultation with MSDE, MDE may grant a school a deferral, not to exceed 3 years from the initial due date, if the school has completed testing for all drinking water outlets in the school in accordance with the regulations, and no test results exceed the AL of 20 ppb (note that as of the 2020-2021 school year, deferral applications are no longer being accepted).

A waiver from future testing may be granted by MDE, in consultation with MSDE, under certain specific situations:

- Type 1, Prior Testing: All drinking water outlets tested for lead no earlier than 5 years before the effective date of the regulations, and every test result for every sample collected was 5 ppb or lower;

- Type 2, Bottled Water: Students in the building do not have access to piped water from any drinking water outlet, and bottled water that meets all National Primary Drinking Water standards is the only source of water for drinking and food preparation; or
- Type 3, Lead-Free Building: The service line, all plumbing connecting the school to the water main, and all interior plumbing in the school building is certified to be lead-free.

Unless the school has been granted a waiver as described above, it must repeat testing every 3 years. Schools granted deferrals must repeat testing 3 years from the deferred due date. Newly constructed schools put into service after the effective date of this regulation must complete initial testing within 12 months of occupancy.

MARYLAND'S LEAD TESTING PROGRAM: 2019 – 2020 SCHOOL YEAR

Testing Results

The third phase of statewide testing ended July 1, 2020. Schools for which the required initial testing was to be completed by July 1, 2020, include (1) all schools serving students in grade 9 through grade 12 constructed 1988 or later, and (2) all schools that received a 12-month deferral and otherwise were to have conducted initial testing during the second phase of the initiative (i.e., on or before July 1, 2019). The latter group of schools includes all schools with buildings constructed before 1988, and serving students grade 6 through grade 8. Schools with overlapping age groupings are required to test by the earliest specified date. It should be noted that there are some schools that completed their testing by July 1, 2020, even though their testing due date may have been July 1, 2021, or later; the test results of those schools are included in the current reporting cycle.

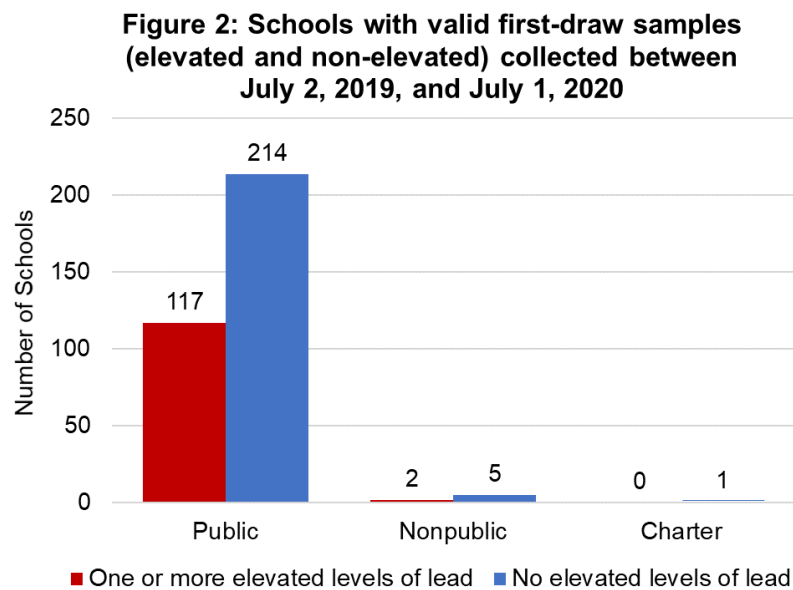

Over 380 schools submitted results of lead samples collected during this reporting period (i.e., between July 2, 2019 and July 1, 2020). Of these schools, MDE was able to review results from 340 schools (331 public schools, one charter school and eight nonpublic schools). Of these 340 schools, 339 schools were determined to have valid first-draw samples. Of these 339 schools, 331 (97.6%) were public schools, one (0.3%) was a charter school, and seven (2.1%) were nonpublic schools (see Figure 1 below). Names and locations of schools submitting results during this reporting period are presented in Tables 1 through 3 in Appendix C.

Figure 1: Schools with valid first-draw samples collected between July 2, 2019, and July 1, 2020

Elevated levels of lead (above the AL of 20 ppb) were found at 119 of the 339 schools that MDE reviewed and determined to have conducted lead testing in accordance with the regulations. There were 117 public schools and two nonpublic schools with elevated results (see Figure 2

below). Of the 8,743 outlets tested in accordance with the first-draw sampling procedures outlined in the regulations, elevated levels of lead (i.e., greater than 20 ppb) were found at a total of 316 outlets (3.6%). Of these 316 outlets, consumption outlets (i.e., outlets used for drinking, cooking, or food preparation) accounted for 250 (79.1%) of the elevated results, while 66 (20.9%) were non-consumption outlets (i.e., outlets used only for purposes other than consumption and not required to be tested). Elevated levels of lead were most frequently found in classroom sinks (38.0% of the 316 outlets), followed by drinking water fountains (31.3%) and home economics classroom sinks (7.3%); kitchen sinks and bathroom sinks comprised 1.9%, and 4.1% of elevated outlets, respectively. A complete list of all outlets found to have elevated levels of lead, including the type, use, location and lead level of the outlet, is presented in tabular form in Tables 10, 11, and 12 located in Appendix F.

Deferrals

Through the reporting period ending July 1, 2020, schools had the option to apply for a deferral of initial sampling, a provision included in both the law (as a waiver) and regulations, either by 12 months or by 3 years.

During the reporting period, no applications for 12-month deferrals or three-year deferrals were received from schools that were required to complete initial testing by July 1, 2020.

Waivers

A total of 140 schools that were scheduled for lead testing by July 1, 2018, by July 1, 2019, or by July 1, 2020, applied for waivers: 17 schools applied for “prior testing” (type 1) waivers; 115 schools applied for “bottled water” (type 2) waivers, and eight schools applied for “lead-free building” (type 3) waivers. As of July 1, 2020, MDE had not granted any waivers. Eight applications for “prior testing” waivers, 107 applications for “bottled water” waivers, and one

application for a “lead-free building” waiver have been denied, and the remaining applications were under review as of the end of the reporting period. Details are presented in Appendix G.

Successes

The Stakeholder Advisory Group has proved to be very valuable. The advice and recommendations from school personnel, laboratory personnel, nonpublic school umbrella associations, and others ensured that the regulations developed were comprehensive, effective, and workable. Information gathered in a survey of public schools and nonpublic schools enabled MDE and MSDE to identify strengths and weaknesses of prior testing that had been conducted by schools, allowing the agencies to better target our limited resources.

The six [training sessions](#) held in spring 2018 were useful in minimizing issues such as sampling errors and incomplete paperwork. The training covered all aspects of implementation of the new law, including sampling and laboratory protocol, paperwork, notification requirements, remediation, and applying for deferrals and waivers. Attendees described the sessions as very helpful.

Direct electronic reporting of lead sample results, which was available to schools and laboratories beginning in May 2019, is intended to help streamline the reporting process and allow for lead sample results to be viewed almost immediately by state and local agencies. In addition, an interactive, Geographic Information System (GIS)-based map view of the lead sample results has been tested and will be available soon. This new feature will give the public a simple way to view lead sample results for schools throughout Maryland.

During the reporting period ending July 1, 2020, MSDE’s Interagency Commission on School Construction (IAC) received 48 applications for funding under HSFF from five school districts for projects related to lead in drinking water in schools. Forty-seven of these applications were for projects at individual schools, while one application included 90 projects at 89 schools in Montgomery County. Of these applications, 22 addressed drinking water outlets testing above 20 ppb of lead. These projects were categorized as “Immediate Life/Safety/Health Environmental Risk;” all of these applications were approved in September 2019, and recommended for funding in October 2019. The other 26 applications addressed lead levels between 5 and 20 ppb; eight of these applications were approved and recommended for funding, while the other 18 were deferred and were not recommended for funding at the time. Recommended funding for the 22 projects in the “Immediate Life/Safety/Health Environmental Risk” category totaled \$57,532. The funding recommendation for the remaining eight projects totaled \$83,750 (note that \$68,350 of this amount was earmarked for the projects at 89 schools in Montgomery County).

During the third reporting cycle, over 8,700 drinking water outlets were tested for lead, of which, 316 (3.6%) were found to have elevated levels of lead. Those identified as consumption taps were required to be immediately removed from service until they could be remediated, replaced, or permanently removed from service. Outlets identified as non-consumption taps were remediated, replaced, permanently removed from service, or signed as non-drinking water outlets, as required. Notification of students, parents, and school staff was required for any outlet with an elevated level of lead (20 ppb), regardless of whether the outlet was identified as

consumption or non-consumption.

Challenges

Many schools and school systems have indicated that the lack of resources available for lead testing required under HB 270, presented a challenge. In addition, for new or recently constructed or renovated schools seeking a waiver based on a “lead-free” building, the expense incurred to receive the proper certification for a waiver from a licensed master plumber or professional engineer/architect may exceed that of testing; it may be that it is easier for truly “lead-free” schools to conduct a round of testing and then apply for a “prior testing” (type 1) waiver.

The reporting of lead sample data continues to be a challenge for many schools. In order to standardize the lead sample results and ancillary data for import into a data tracking system, MDE developed a reporting template. In some cases, laboratories populate the spreadsheet; in other cases, school personnel type this information into the spreadsheet themselves, resulting in an increased workload. Additionally, the potential for error in transcription during manual data entry is concerning. We expect this issue to be less of a problem as the program matures, and schools and laboratories become more familiar with the process. Laboratories have already developed methods to transfer data from their format to the new format and have assisted schools in their reporting.

Due to the COVID-19 pandemic, many schools experienced difficulties with completing testing within the timeframe specified by Maryland law and regulations. Since regulations require schools to be in regular session, with buildings occupied and water use representative of normal occupied conditions, some schools that had planned to conduct testing between March and July 2020 were unable to meet the conditions necessary to conduct sampling.

Conclusion

Although Maryland’s program for lead testing in drinking water in schools is still in its early stages, the results so far are promising: over 380 schools reported the results of their testing during the third reporting year, which began on July 2, 2019, and ended on July 1, 2020. With the completion of this third phase, the majority of applicable schools serving students in prekindergarten through grade 12 have now conducted at least one round of testing.

As Maryland’s testing program matures, schools will continue to identify, remove from service, and remediate outlets showing elevated levels of lead. With the strengthening of this initiative via the passage of HB 1253, schools are beginning to address outlets exhibiting lead concentrations over 5 ppb. Overall, this constitutes a significant reduction in environmental exposure to lead for approximately 1 million children in Maryland who depend on drinking water provided by the nearly 3,000 public and nonpublic schools in the state.

APPENDIX A

Glossary

Action Level - A level of lead which, if exceeded, requires the school to complete steps including remedial action, notification, and follow-up sampling.

Bottled water - Water that is intended for human consumption and that is sealed in bottles or other containers and meets the National Primary Drinking Water regulations for all regulated contaminants.

Certified Laboratory - A laboratory certified by the Maryland Department of the Environment to analyze drinking water samples for lead.

Deferral - An extension in the time a school is allowed to complete initial testing.

Department - The Maryland Department of the Environment (MDE).

Drinking water outlet - A potable water fixture that is used for drinking or food preparation.

Drinking water outlets include:

- a. Drinking fountains (DF), including both bubbler and water cooler styles;
- b. Ice-making machines (IM);
- c. Hot drink machines (HD);
- d. Kitchen sinks (KS);
- e. Classroom combination sinks with drinking fountains (CF);
- f. Sinks in home economics classrooms (HE);
- g. Teachers' lounge sinks (TL);
- h. Nurse's office sinks (NO);
- i. Sinks in special education classrooms (SE);
- j. Any other sink known to be used for human consumption (OT).

NOTE: Drinking water outlet does not include an outlet clearly signed as not a drinking water outlet.

Elevated level of lead - A lead concentration in drinking water that exceeds the concentration of 20 parts per billion (ppb) in a 250 milliliter (mL) first-draw sample, as recommended by the EPA in technical guidance documents for schools, including "3Ts for Reducing Lead in Drinking Water in Schools (2006)."

First-draw sample (FD) - A 250 mL sample of tap water that has been standing in plumbing for 8 to 18 hours and is collected without flushing the tap.

Flushed sample (FL) - A 250 mL sample of tap water that has been drawn from an outlet immediately after the outlet has been run for at least 30 seconds. Flushed samples are collected after all first-draw samples within the building have been collected.

Lead-free - Plumbing that meets the definition of "lead-free" as defined by the Annotated Code of Maryland, Business Occupations and Provisions Article, §§12-101, 12-605.1, and 12-605.2.

MDH - The Maryland Department of Health.

MSDE - The Maryland State Department of Education.

Nonpublic school - An elementary or secondary school, other than a public school, offering education for prekindergarten through grade 12 wherein any child may legally fulfill compulsory school attendance requirements.

Public School - A school, including a charter school that is maintained at public expense for the education of the children of a community or district and constitutes a part of a system of free public education for prekindergarten through grade 12.

School - An individual school or a school system.

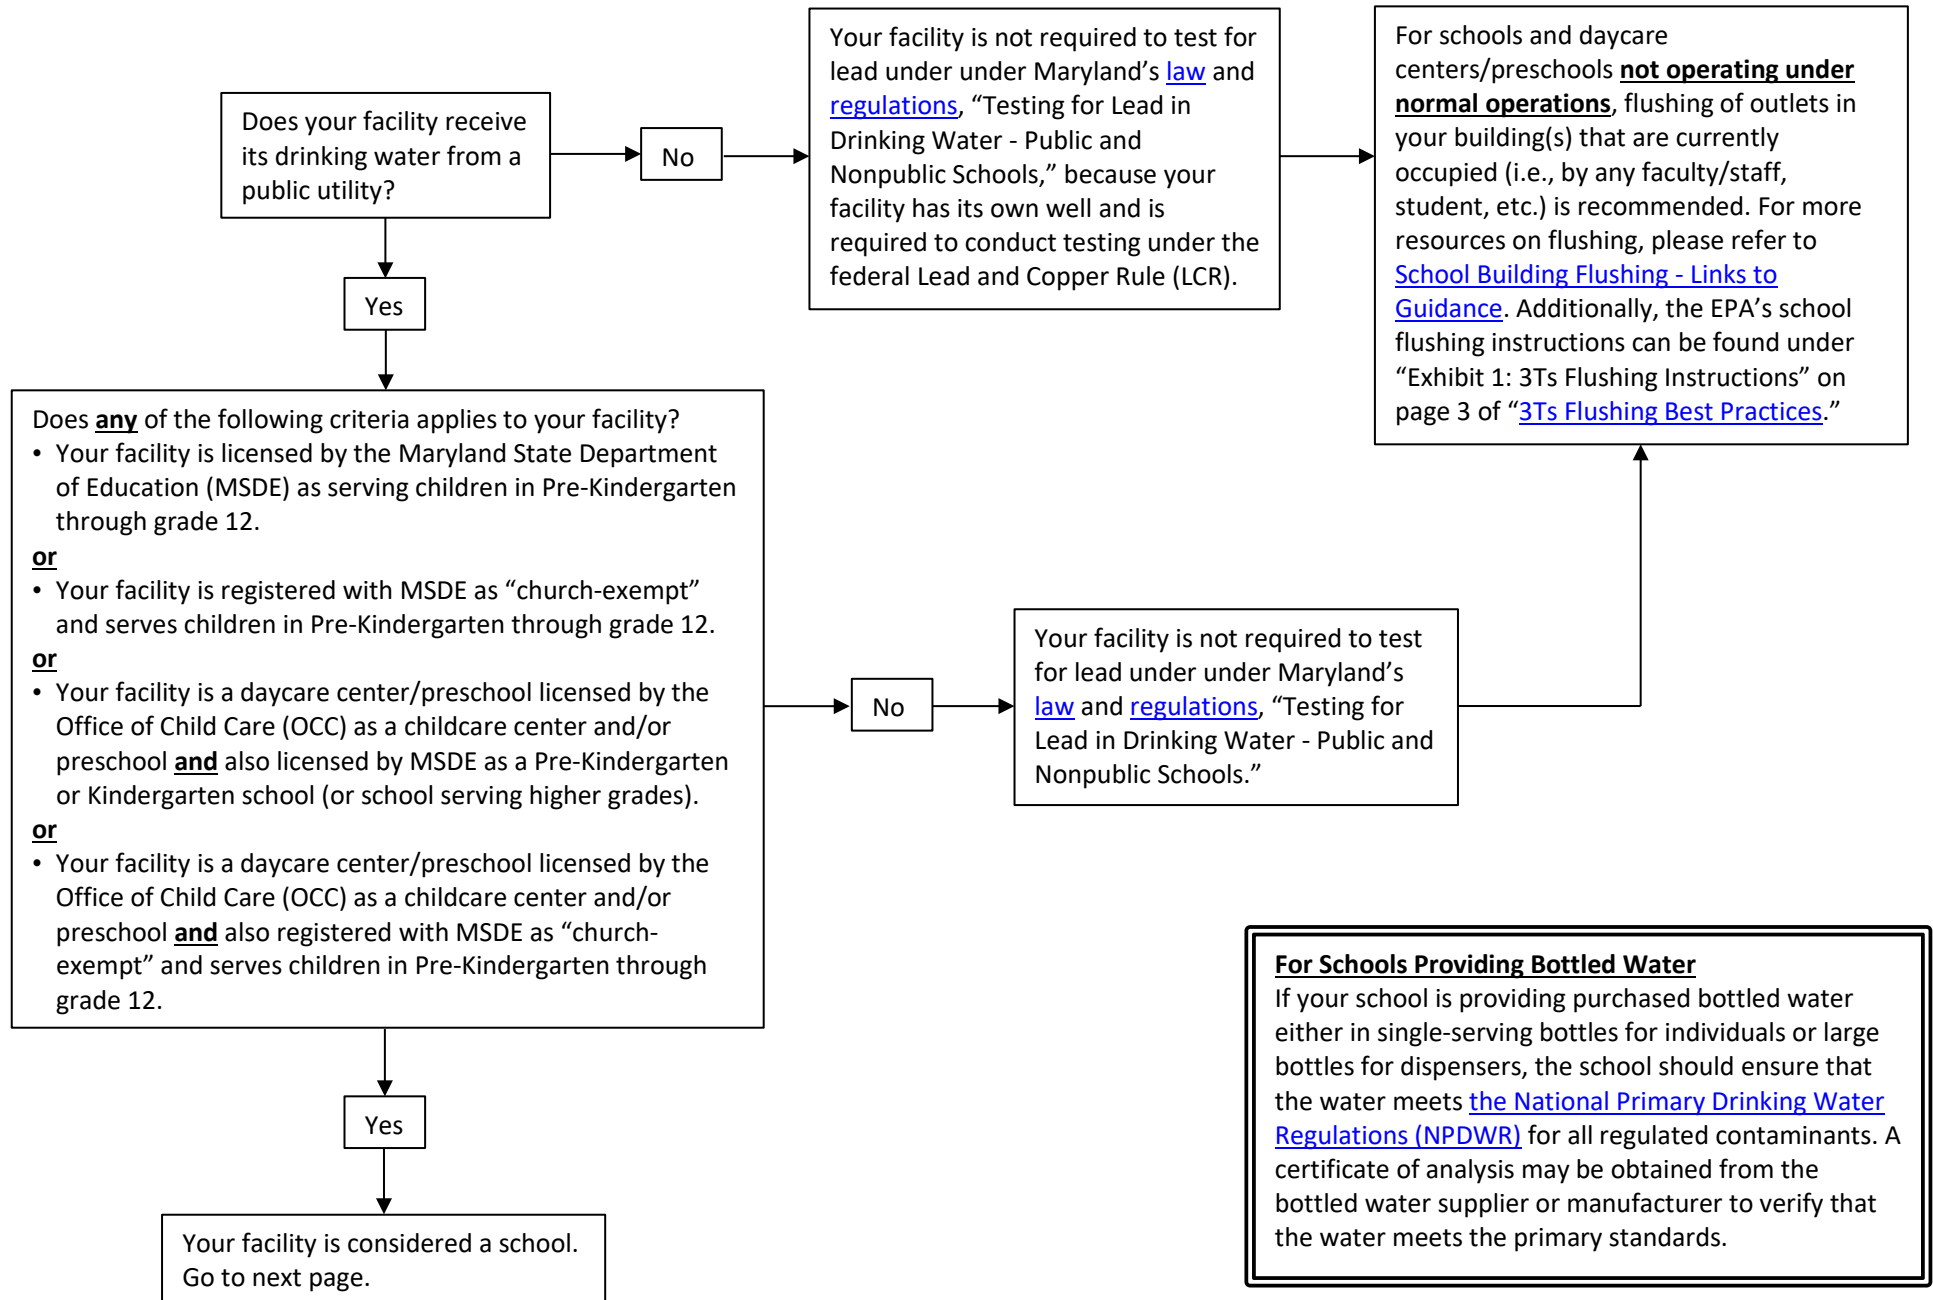

School day - Any day on which school is in session.

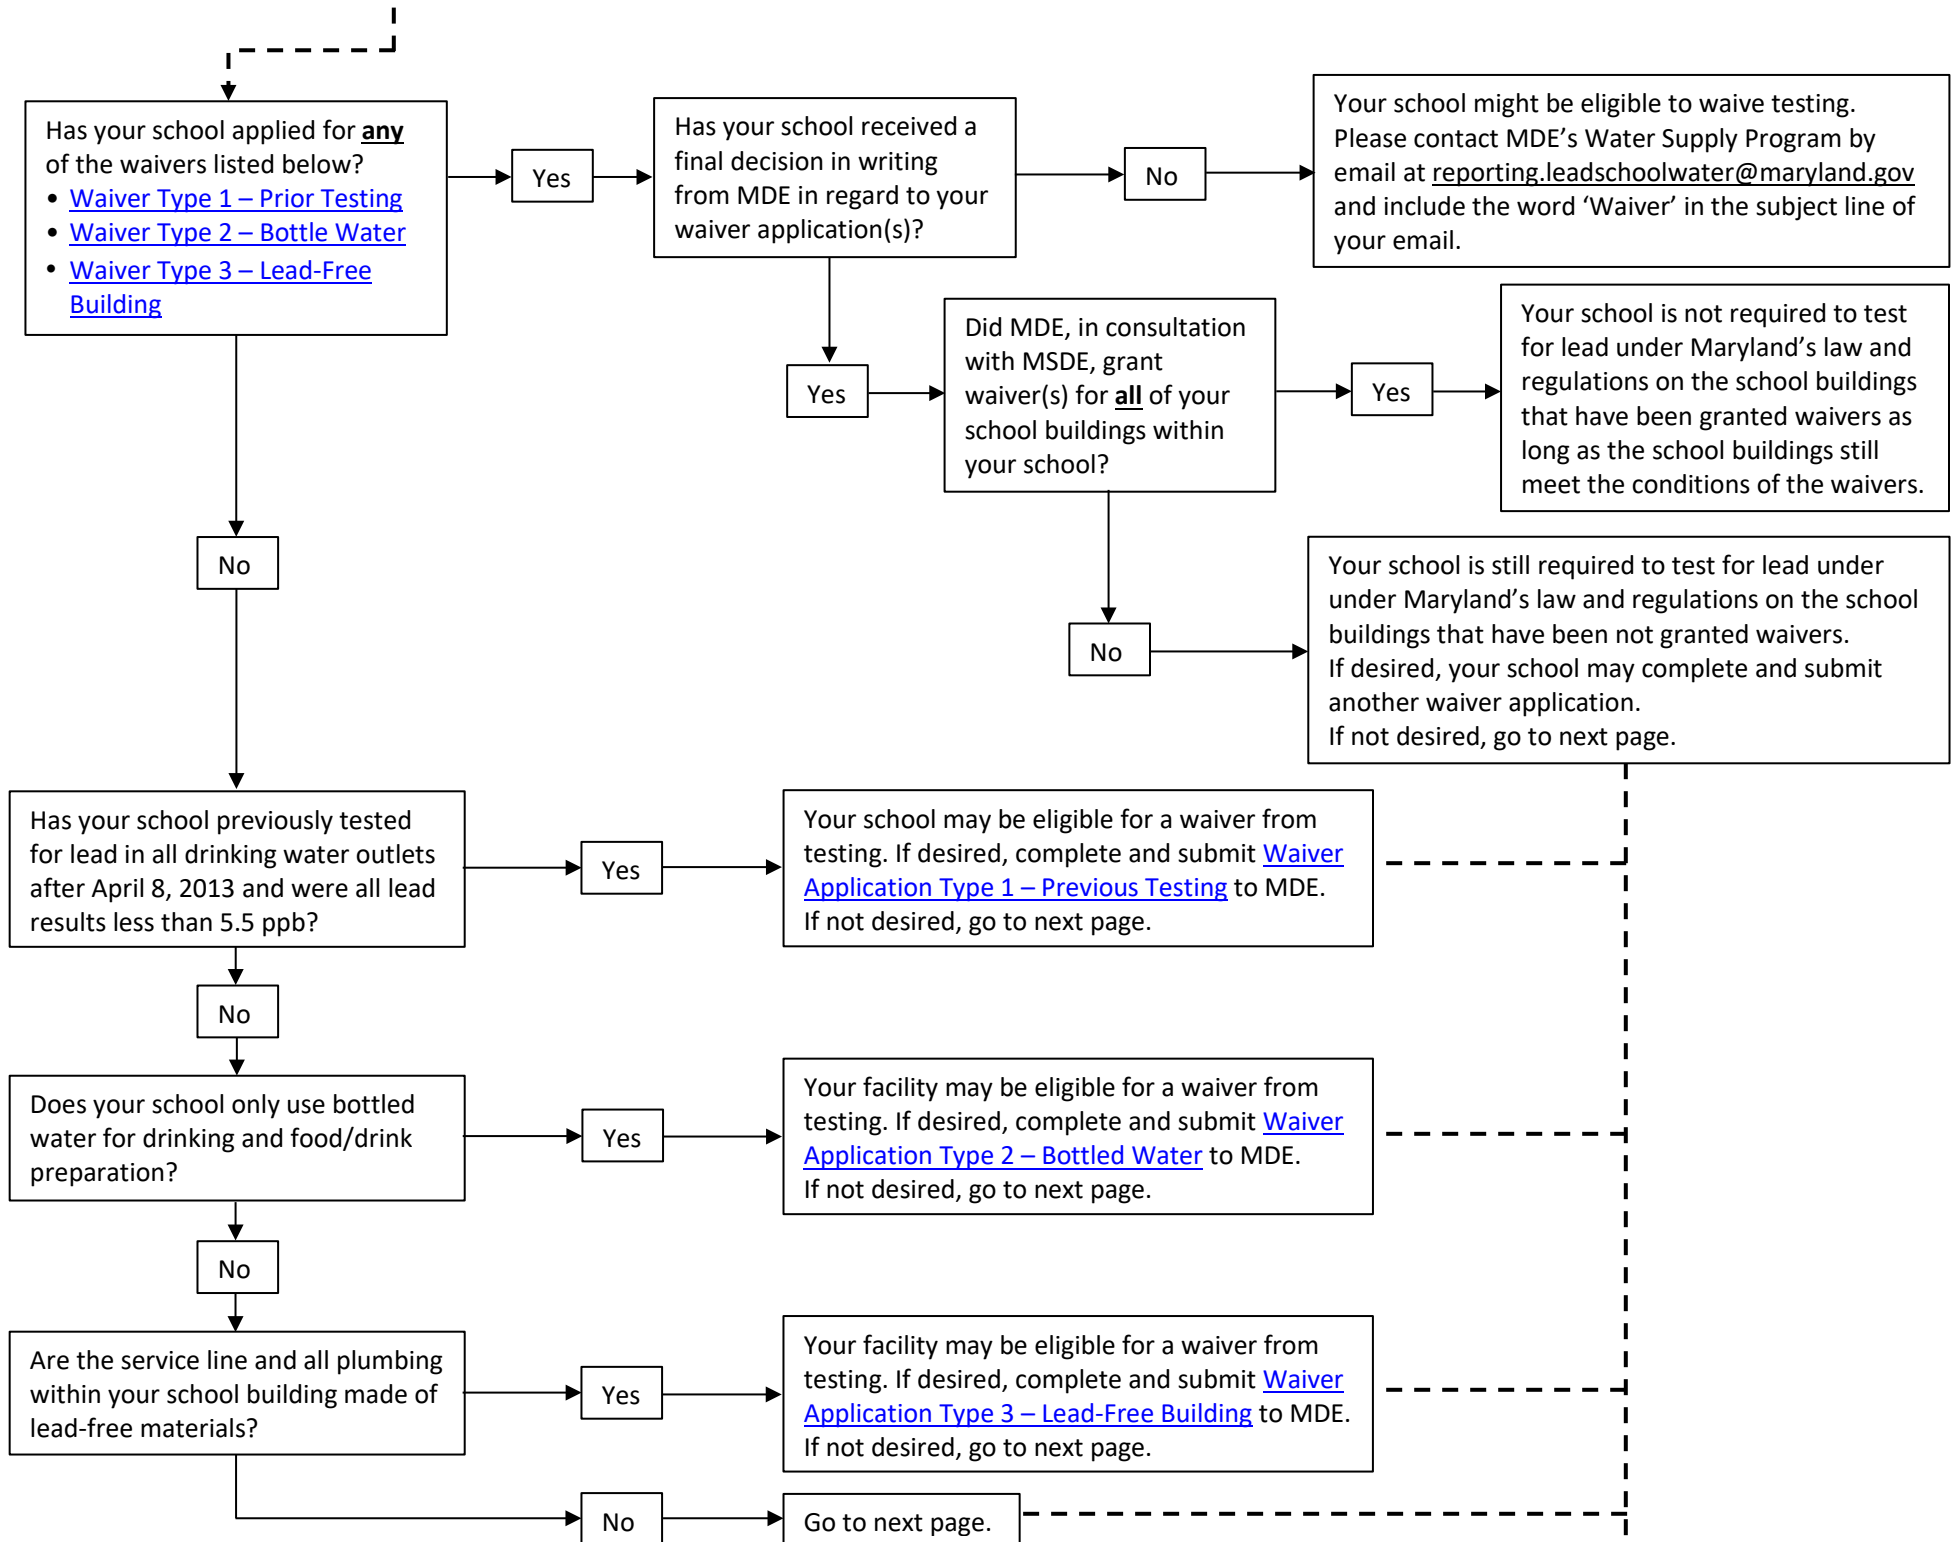

School building - Any structure, facility, addition, or wing of a school that may be occupied by children or students prekindergarten to grade 12. This does not include buildings used solely for administrative purposes.

Technical Guidance - The most recent technical guidance documents issued by EPA for reducing lead in drinking water in schools, such as the “3Ts for Reducing Lead in Drinking Water in Schools” (2006) and any subsequent technical guidance documents issued by EPA for reducing lead in drinking water in schools.

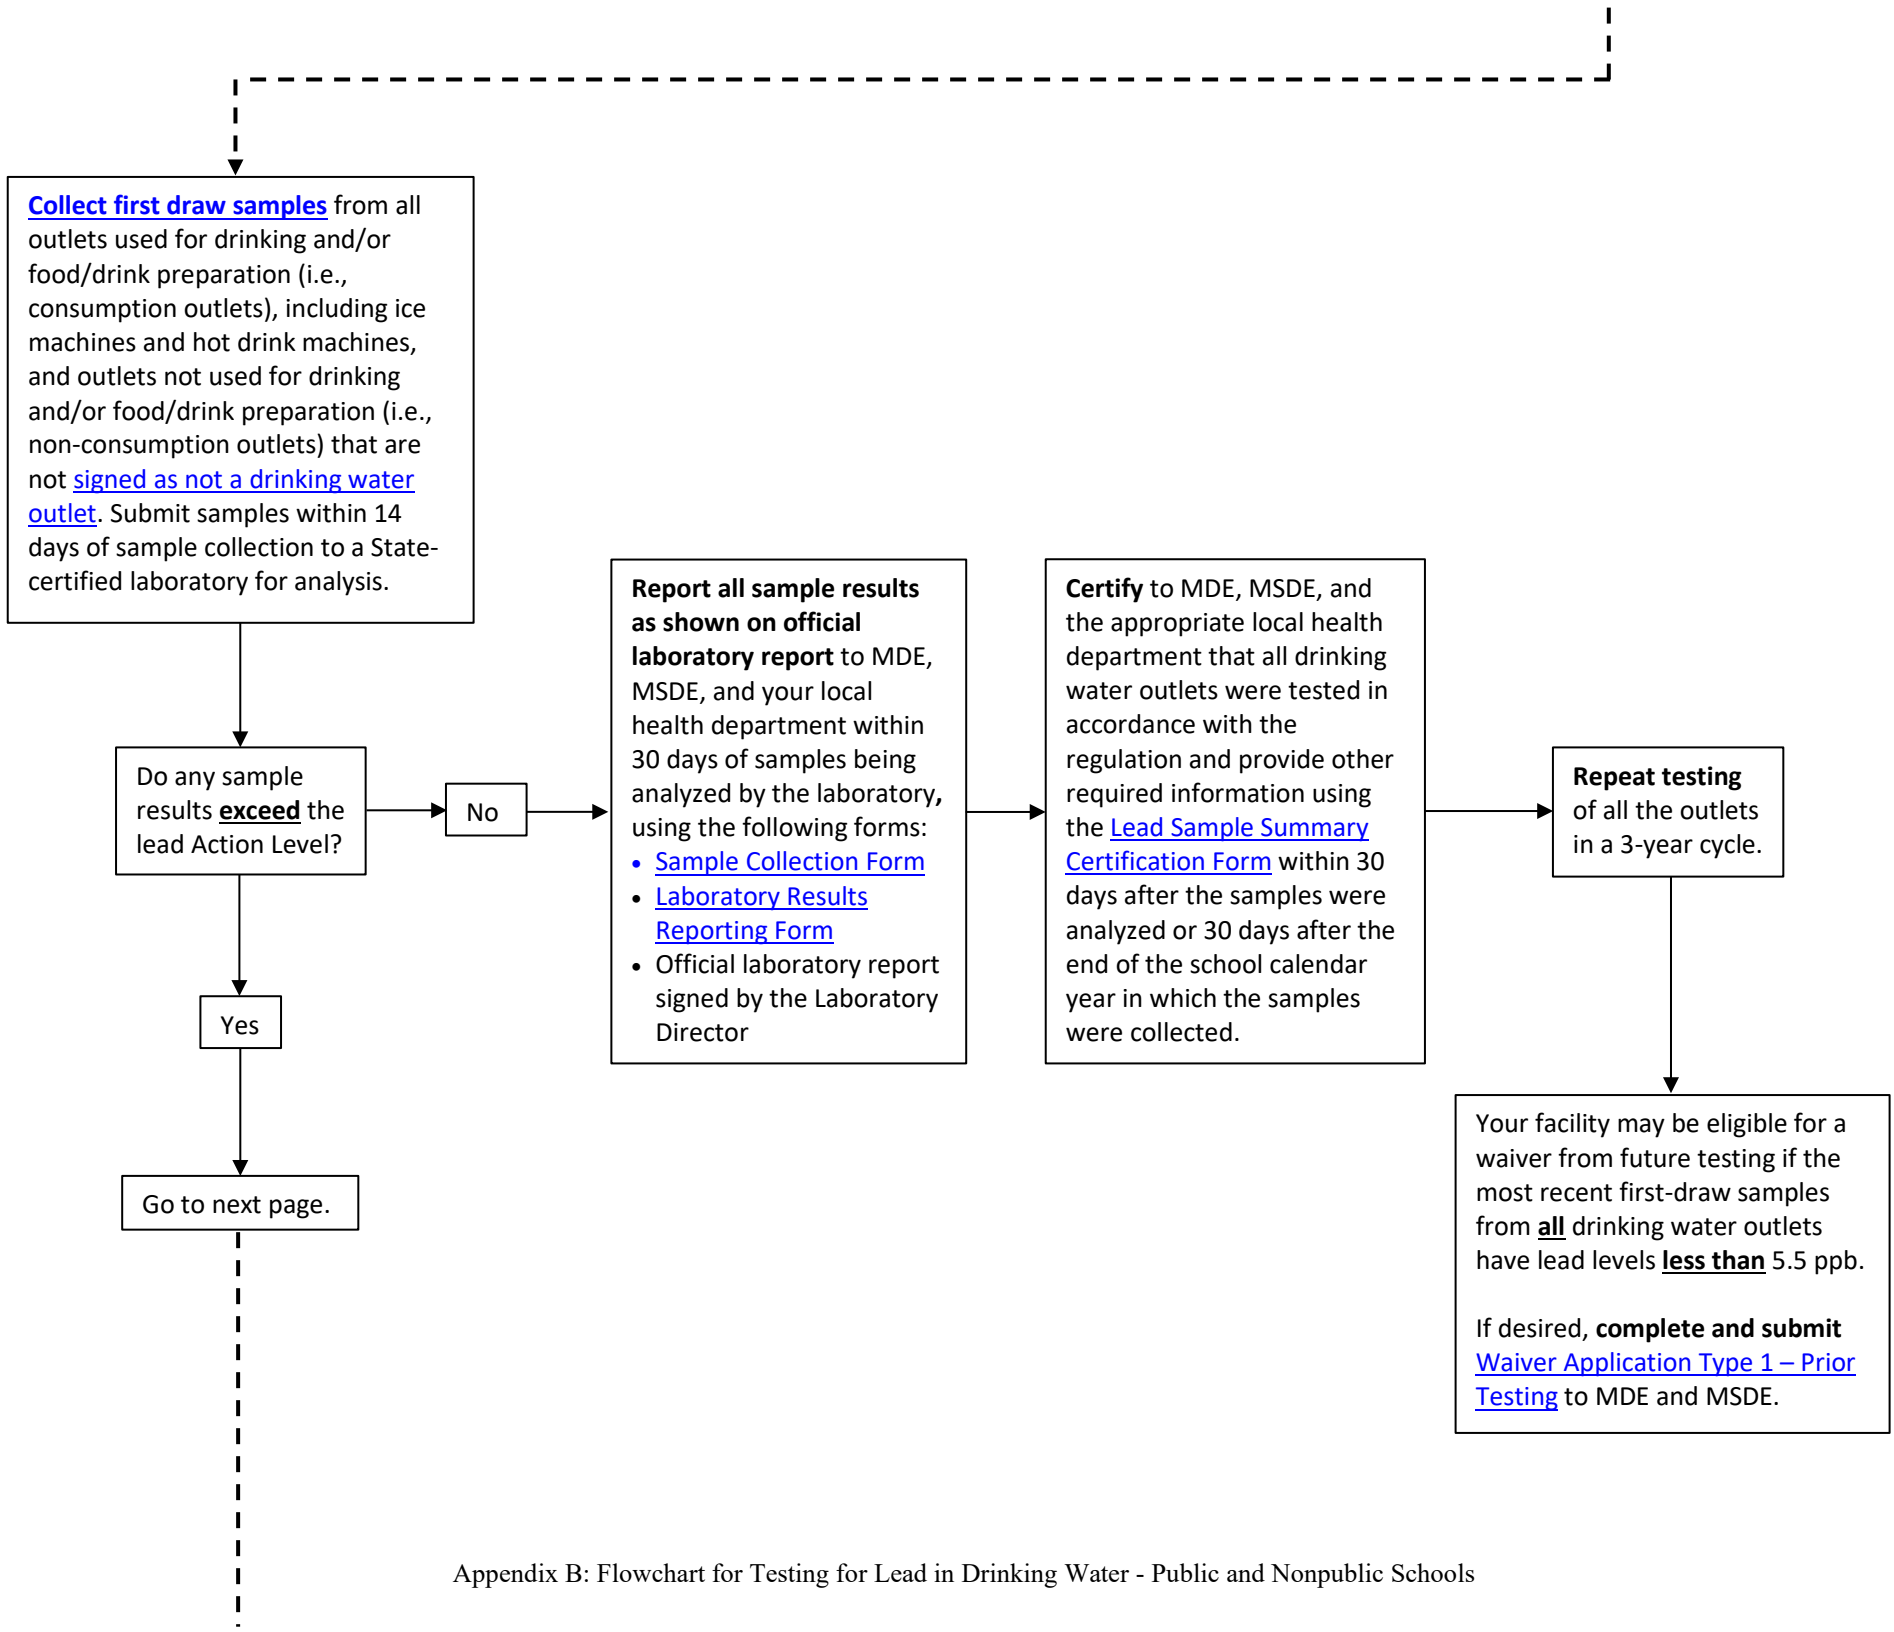

Waiver - An indefinite exemption from testing.
