## **I. Introduction**

This report constitutes the Maryland Public Service Commission’s *Ten-Year Plan (2022-2031) of Electric Companies in Maryland*. The Ten-Year Plan is submitted annually by the Commission to the Secretary of the Department of Natural Resources in compliance with § 7-201 of the Public Utilities Article, *Annotated Code of Maryland*. It is a compilation of information pertaining to the long-range plans of Maryland’s electric companies. The report also includes discussion of selected developments that may affect these long-range plans. The analysis contained in the Ten-Year Plan uses forecasts provided by Maryland utilities, PJM Interconnection, LLC (“PJM”), and other state and federal agencies.

The 2022 – 2031 Ten-Year Plan provides a forward-looking analysis of the composition of Maryland’s electricity and generation profile and covers topics relevant to Maryland, including load growth forecasts, and the state of the state’s generation resources and electric transmission system.

Changes to Maryland’s supply and demand profile may necessitate additional infrastructure investment in the state’s distribution network to ensure the safe, reliable, and economic supply of electricity to end users. The Commission exercises its statutory and regulatory power to ensure adequate, economical, and efficient delivery of utility services in the state.<sup>1</sup> A record of these proceedings is published in the Commission’s annual report.

## **II. Background**

Maryland is geographically divided into 13 electric utility service territories.<sup>2</sup> The four largest, by number of Maryland customers, are served by investor-owned utilities (“IOUs”); four represent electric cooperatives (two of which serve mainly rural areas of

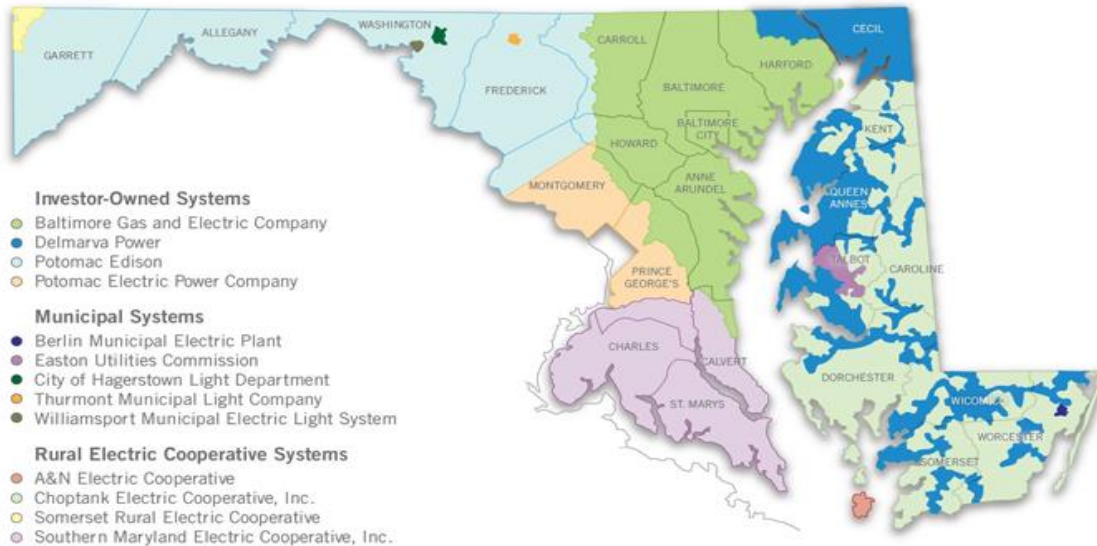

---

<sup>1</sup> The Maryland Public Service Commission and the Maryland Energy Administration represented Maryland on a 16-state task force on future distribution system planning. This task force started work in 2019 and was funded by the U.S. Department of Energy (“DOE”). The task force was staffed and sponsored by the DOE, the National Association of Regulatory Utility Commissioners (“NARUC”), and the National Association of State Energy Officers (“NASEO”). This work continued through 2020 and produced a report of its findings in February, 2021 at <https://pubs.naruc.org/pub/14F19AC8-155D-0A36-311F-4002BC140969>.

<sup>2</sup> The Maryland utilities: Baltimore Gas and Electric Company (“BGE”), Delmarva Power & Light Company (“DPL”), The Potomac Edison Company (“PE”), Potomac Electric Power Company (“Pepco”), Berlin Municipal Electric Plant (“Berlin”), Easton Utilities Commission (“Easton”), City of Hagerstown Light Department (“Hagerstown”), Thurmont Municipal Light Company (“Thurmont”), Williamsport Municipal Electric Light System (“Williamsport”), A&N Electric Cooperative (“A&N”), Choptank Electric Cooperative, Inc. (“Choptank”), Somerset Rural Electric Cooperative (“Somerset”), and Southern Maryland Electric Cooperative, Inc. (“SMECO”).

Maryland); and five are served by electric municipal operations.<sup>3</sup> PJM sub-regions, known as zones, generally correspond with the IOU service territories. PJM zones for three of the four IOUs traverse state boundaries and extend into other jurisdictions.<sup>4</sup> Figure 1 provides a geographic picture of the Maryland utilities' service territories. Figure 2 depicts the Maryland's PJM forecast zones.

**Figure 1: Maryland Utilities and their Service Territories in Maryland<sup>5</sup>**

<sup>3</sup> The Commission regulates all Maryland public service companies, as defined by §1-101(x) of the Public Utilities Article, *Annotated Code of Maryland*.

<sup>4</sup> Potomac Electric Power Company, Delmarva Power & Light Company, and The Potomac Edison Company are the three IOUs that extend into other jurisdictions. Pepco, DPL, and PE data are a subset of the PJM zonal data, since PJM's zonal forecasts are not limited to Maryland. The Baltimore Gas and Electric Company zone, alone, resides solely within the State of Maryland.

<sup>5</sup> *Cumulative Environmental Impact Report 18*, Maryland Department of Natural Resources, Figure 2-16, <http://www.pprp.info/ceir18/HTML/Report-18-Chapter-2-4.html> (last updated September 2018).

**Figure 2: PJM Maryland Forecast Zones<sup>6</sup>**

### **III. Maryland Load Growth Forecasts**

Each year, PJM presents a Load Forecast Report for each PJM zone, region, and locational deliverability area that is derived in part from an independent economic forecast prepared by Moody’s Analytics. The economic analysis includes projections related to the expected annual growth of the gross domestic product (“GDP”) and can provide insight into possible trends for regional population growth and household disposable income, which in turn can impact energy sector planning.

The PJM forecast contrasts GDP growth projections included in the current (*i.e.* September 2021) load forecast with that of the previous year (*i.e.* September 2020), as depicted below in Table 1. At the outset of the 2022-2031 planning period discussed in this Ten-Year Plan, the projected average GDP growth reflected in the current PJM load forecast is lower than that projected by the previous year’s forecast for roughly the same time period. The Commission notes that the GDP projections included in the most recent PJM Load Forecast Report may not be reflective of current trends of the GDP which is dropping mainly as a result of a sharp drop in net exports. GDP shows a first quarter drop in GDP of 1.6 percent, and an expected second quarter drop in GDP of 0.9 percent.<sup>7</sup>

Demand forecasts submitted by the Maryland utilities for the 2022-2031 planning period discussed in this Ten-Year Plan are comparable to the forecasts provided to the Commission over the last several years. The Maryland utilities’ load forecasts indicate a modest amount of projected annual growth in the number of customers, energy sales, and demand throughout the state.

<sup>6</sup> *PJM Load Forecast Report*, PJM, (Jan. 2021), <https://www.pjm.com/-/media/library/reports-notice/load-forecast/2021-load-report.ashx>.

<sup>7</sup> The current GDP can be found at the Bureau of Economic Analysis, <https://www.bea.gov/data/gdp/gross-domestic-product>.

**Table 1: Comparison of Compound Annual Growth Rate Projections – 2019, 2020, 2021, and 2022<sup>8</sup>**

Forecasts	Ten Year Plan 2019-2028	Ten Year Plan 2020-2029	Ten Year Plan 2021-2030	Ten Year Plan 2022-2031
<b>Customer Growth</b>	0.8%	0.7%	0.7%	0.8%
<b>Energy Sales</b>	-0.2%	0.1%	0.4%	0.4%
<b>Summer Peak Demand</b>	0.3%	0.3%	1.4%	0.9%
<b>Winter Peak Demand</b>	0.3%	0.5%	0.7%	0.8%

### A. Customer Growth Forecasts<sup>9</sup>

At the close of 2021, approximately 90 percent of utility customers in Maryland were categorized as residential ratepayers; however, residential sales represented only 46 percent of the year’s total retail energy sales, as illustrated in Figure 3 below.<sup>10</sup> Conversely, commercial and industrial (“C&I”) customers represented just 10 percent of Maryland utility customers, but accounted for over half of the total retail energy sales for the state.

**Figure 3 Total Customers and Energy Sales (in GWh) by Customer Class for 2021**

PJM’s process for modeling the load forecast involves creating a series of models where daily load is regressed on calendar, weather, economic, and end-use variables. The economic, weather, and end-use variables are compiled into indices which are then treated as independent variables in the final regression.<sup>11</sup>

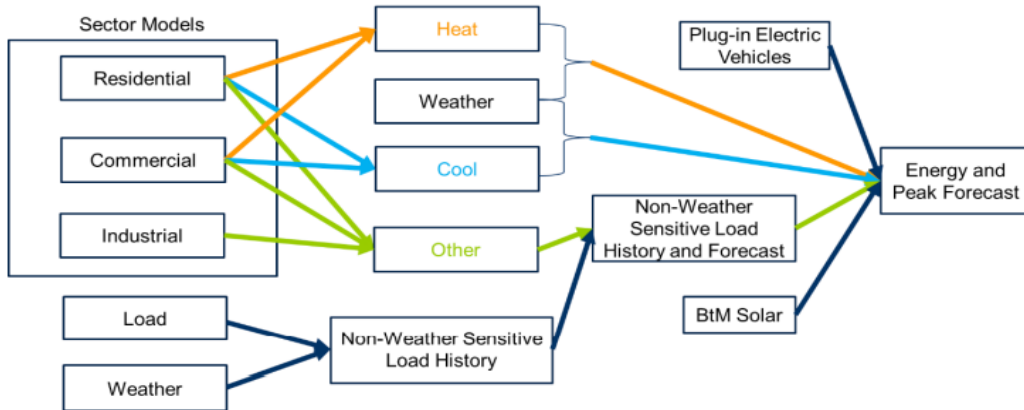

<sup>8</sup> See Appendix Tables 1(a)(i), 2(a)(i), 3(a)(i), 3(a)(iii).

<sup>9</sup> See Appendix Table 1(a) for a complete list of utility-by-utility customer growth forecasts.

<sup>10</sup> See Appendix Tables 1(b)(i) and 1(b)(ii).

<sup>11</sup> *PJM Load Forecast Supplement*, PJM, (Jan. 2022), <https://www.pjm.com/-/media/planning/res-adeq/load-forecast/load-forecast-supplement.ashx>.

**Figure 4 Example of PJM Load Forecast Modeling**

As reflected in Table 2 below, the statewide forecasted compound annual growth rate during the planning period is 0.75 percent for all customer classes, which translates into a 6.96 percent increase in the total number of Maryland customers by the end of this 10-year planning period.

**Table 2: Maryland Customer Forecast (All Customer Classes)<sup>12,13</sup>**

Year	Berlin	BGE	DPL	Easton	Hagers-town	PE	Pepco	SMECO	Thur-mont	William-sport	Total
2022	2,643	1,332,243	215,538	10,852	17,540	282,523	594,159	173,796	2,874	1,018	2,633,185
2023	2,632	1,344,574	216,290	10,871	17,581	283,969	599,547	176,016	2,874	1,018	2,655,372

<b>Percent Change (2022-2031)</b>	<b>6.23%</b>	<b>6.75%</b>	<b>3.34%</b>	<b>1.58%</b>	<b>2.10%</b>	<b>7.01%</b>	<b>7.86%</b>	<b>10.93%</b>	<b>0.00%</b>	<b>0.00%</b>	<b>6.96%</b>
<b>Compound Annual Growth Rate</b>	<b>0.67%</b>	<b>0.73%</b>	<b>0.37%</b>	<b>0.17%</b>	<b>0.23%</b>	<b>0.76%</b>	<b>0.84%</b>	<b>1.16%</b>	<b>0.00%</b>	<b>0.00%</b>	<b>0.75%</b>

<sup>12</sup> See Appendix Table 1(a)(i). Note that Choptank, A&N, and Somerset did not provide the requested applicable information in response to the Commission’s 2022 data request for the Ten-Year Plan.

<sup>13</sup> Numbers are rounded to nearest whole number.

The customer forecasts provided by the utilities are comparable to the forecasts they provided for the 2021-2030 Ten-Year Plan. Overall, the increase in the number of customers across Maryland is primarily driven by growth in the residential class. Growth in the residential sector is projected to account for an additional 171,109 customers by 2031, or 93 percent of total new customers projected. The largest percentage increase in the number of customers is projected to occur in SMECO’s service territory with an increase of 11 percent, or 18,000 new residential customers. The largest absolute increase in the number of customers is projected to come from BGE’s residential customer base, with the addition of 85,686 residential customers forecasted during this planning period.<sup>14</sup> BGE’s projected increase in its residential customer base accounts for 50 percent of the total number of new residential customers across all service territories during the 10-year planning period.<sup>15</sup> The increase in residential customers for BGE translates into a compound annual growth rate of 0.77 percent.<sup>16</sup>

Maryland utilities are projecting an increase in their customer bases during this planning period. Table 3 below shows that the aggregated utilities’ customer forecasts are 0.53 percent higher than the projections provided during the previous planning period. The most significant percentage change observable in the aggregated statewide data between the previous and current Ten-Year Plan forecasts is within the “Industrial” customer class,<sup>17</sup> largely attributable to an increased projection by BGE.

**Table 3: Projected Percentage Increase in the Number of Customers by Class, 2022 – 2031<sup>18</sup>**

Class	All Utilities		
	2021 to 2030	2022 to 2031	Difference
Residential	6.72%	7.23%	0.51%
Commercial	3.88%	4.52%	0.64%
Industrial	2.70%	6.51%	3.81%
Other	1.16%	-0.16%	-1.32%
Resale	0.00%	0.00%	0.00%
<b>Total Customers</b>	<b>6.43%</b>	<b>6.96%</b>	<b>0.53%</b>

<sup>14</sup> See Appendix Table 1(a)(ii).

<sup>15</sup> *Id.*

<sup>16</sup> *Id.*

<sup>17</sup> The “Other” rate class refers to customers that do not fall into one of the listed classes; street lighting is an example of a rate class included under “Other.” The Resale class refers to Sales for Resale which is energy supplied to other electric utilities, cooperatives, municipalities, and federal and state electric agencies for resale to end use consumers. PE is the only utility with any resale customers; these wholesale customers are PJM, Monongahela Power Company, West Penn Power Company, and Old Dominion Electric Cooperative.

<sup>18</sup> See Appendix Table 1(a)(i)-(vi) for more information.

## B. Energy Sales Forecast

The Maryland utilities provide forecasts for energy sales and peak load in terms of “Gross of Demand Side Management (“DSM”)” and “Net of DSM.”<sup>19</sup> In order to provide a more complete look at Maryland energy sales and peak demand forecasts, Sections III.B and III.C discuss the forecasts in “Gross of DSM” terms, which reflect the forecasts *before* the impact of DSM programs.

Table 4 shows the energy sales forecast within Maryland (Gross of DSM) for the 10-year planning period, as provided by the utilities.

**Table 4: Maryland Energy Sales Forecast (GWh) (Gross of DSM)<sup>20</sup>**

	Berlin	BGE	DPL	Easton	Hagerstown	PE	Pepco	SMECO	Total
<b>Change (2022-2031)</b>	3	(618)	67	13	7	1,613	811	317	2,213
<b>Percent Change (2022-2031)</b>	6.95%	2.09%	1.37%	5.03%	2.27%	18.82%	5.01%	8.83%	3.49%
<b>Compound Annual Growth Rate</b>	0.75%	-0.23%	0.15%	0.55%	0.25%	1.93%	0.54%	0.94%	0.38%

The aggregated forecasts show a compound annual increase of 0.38 percent across all the Maryland service territories for 2022-2031, a decrease from the 0.45 percent annual growth rate reported in the 2021-2030 Ten-Year Plan. This result is primarily due to BGE’s revised projection of a negative energy sales growth rate in the 2022 – 2031 Ten-Year Plan. The overall growth projected by BGE for this 10-year planning period is the lowest of any Maryland utility in absolute terms, with the company projecting 618 GWh less in energy sales by 2031.

## C. Peak Load Forecasts

PJM’s 2022 Load Forecast Report includes long-term projections of peak loads for the entire wholesale market region and each PJM zone.<sup>21,22</sup> Due to the fact that the PJM zones can extend outside of Maryland, the utilities submit peak demand forecasts restricted to their Maryland service territories as part of the Ten-Year Plan.<sup>23</sup> According

<sup>19</sup> See Appendix Table 2(a)(ii) for the Maryland Energy Sales forecast, Net of DSM programs; Appendix Table 3(a)(ii) for the Maryland Summer Peak Demand Forecast, Net of DSM programs; and Appendix Table 3(a)(iv) for the Maryland Winter Peak Demand Forecast, Net of DSM programs.

<sup>20</sup> See Appendix Table 2(a) for utility-by-utility energy sales forecasts for the Maryland service territory, available by Gross and Net of DSM. See Appendix Table 2(b) for the same information on a system wide basis.

<sup>21</sup> *PJM Load Forecast Report*, PJM, (Jan. 2022) at 33-36, Table B-1, <https://www.pjm.com/-/media/library/reports-notice/load-forecast/2022-load-report.ashx>.

<sup>22</sup> The four PJM zones spanning the Maryland service territory include APS, BGE, DPL, and PEPCO. See *supra* Figure 2 for a map of the Maryland zones. “APS” represents the Allegheny Power Zone, of which PE is a sub-zone.

<sup>23</sup> See Appendix Table 3(a) for more information on in-state peak demand forecasts for Maryland utilities, available for summer and winter, and by gross and net of DSM programs. See Appendix Table 3(b) for the same information, presented as system wide data for utilities operating in Maryland.

to PJM’s 2022 Load Forecast Report, the PJM Regional Transmission Organization (“RTO”) will continue to be summer peaking during the next 15 years.<sup>24</sup> In 2022, three of the PJM zones of which Maryland is comprised are projected to experience their peak demands during the month of July,<sup>25</sup> the same month as the broader PJM Mid-Atlantic region.<sup>26</sup> The APS region is an exception which is projected to experience its peak demands during January.

In contrast to PJM’s forecasts, Berlin, Hagerstown, PE, SMECO, Thurmont, and Williamsport are forecasting their peak demands to occur in the winter in most or all of the forecasted years. These utilities have generally peaked in the winter over the past few planning periods for reasons such as: higher concentrations of electric heating; geographical features; and colder temperatures. Figure 5 shows the breakdown of which fuels Maryland households use as a heating source in 2020.

**Figure 5 Percentage of MD Households Using Fuel for Heating Source<sup>27</sup>**

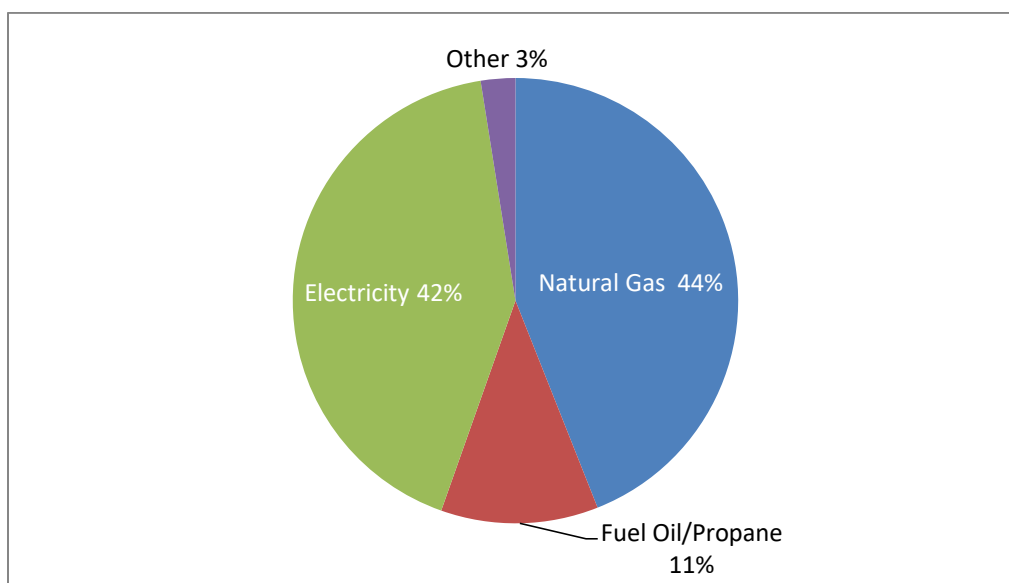

Figure 6 compares the average of the Maryland utilities’ forecasted summer peak demands for their Maryland service territories with summer forecasts for the PJM Mid-Atlantic region and for the PJM RTO as a whole. In the near-term, the Maryland utilities are showing stronger peak demand growth rate than the PJM RTO and the PJM Mid-Atlantic region. Also reflected in Figure 6 is a drop in the summer peak demand growth

<sup>24</sup> *PJM Load Forecast Report*, PJM, (Jan. 2022) at 1-2, <https://www.pjm.com/-/media/library/reports-notice/load-forecast/2022-load-report.ashx>.

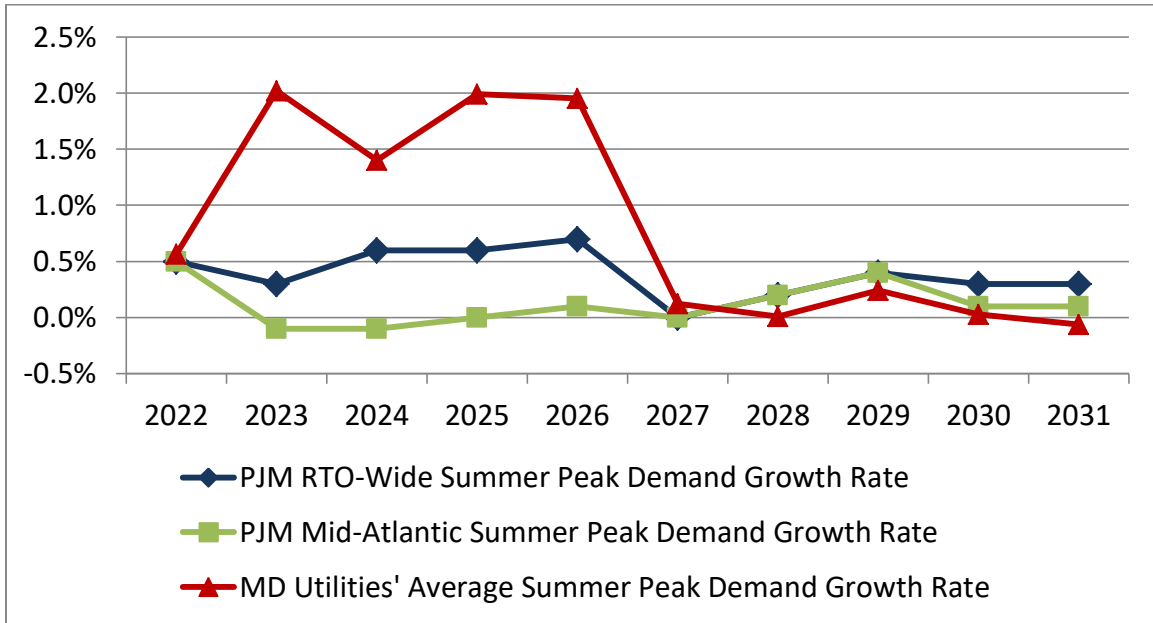

<sup>25</sup> *Id.* at 45-46, Table B-5.

<sup>26</sup> *Id.* Three of the Maryland PJM zones (BGE, DPL, and Pepco) are considered to be part of the PJM Mid-Atlantic Region. The fourth Maryland PJM zone (APS) is presented as part of the PJM Western Region data set.

<sup>27</sup> *Maryland State Energy Profile Analysis*, U.S. Energy Information Administration (November 18, 2021), <https://www.eia.gov/state/analysis.php?sid=MD>, <https://www.eia.gov/state/print.php?sid=MD>.

rates for the Maryland utilities in 2027, after which time the growth rates generally level off through 2031 and follows a similar path to the PJM RTO and the PJM Mid-Atlantic region.

**Figure 6 Average of Utilities' Projected Summer Peak Demand Growth Rates (Gross of DSM) Compared to Projected Summer Peak Demand Growth Rates for PJM Mid-Atlantic and PJM RTO<sup>28,29</sup>**

The Maryland utilities also provided peak demand forecasts for the winter season in response to the Ten-Year Plan data request. Figure 7 below depicts an average of the Maryland utilities' forecasted winter peak demands, contrasted with winter peak demand forecasts for the PJM Mid-Atlantic region and for the PJM RTO.

<sup>28</sup> *PJM Load Forecast Report*, PJM, (Jan. 2022) at 33-36, Table B-1, <https://www.pjm.com/-/media/library/reports-notice/load-forecast/2022-load-report.ashx>.

<sup>29</sup> The Utilities' average summer peak demand growth rates were calculated using the Utilities' data responses to the Commission's 2021 data request for the Ten-Year Plan. See Appendix Table 3(a)(i).

**Figure 7 Average of Utilities' Projected Winter Peak Demand Growth Rates (Gross of DSM) Compared to Projected Winter Peak Demand Growth Rates for PJM Mid-Atlantic and PJM RTO<sup>30,31</sup>**

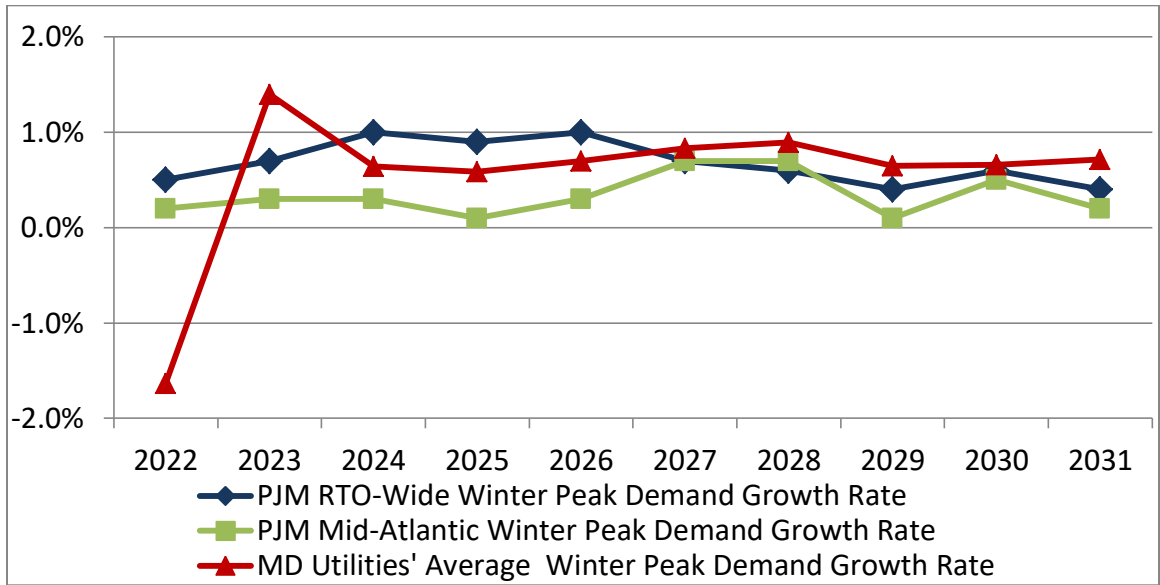

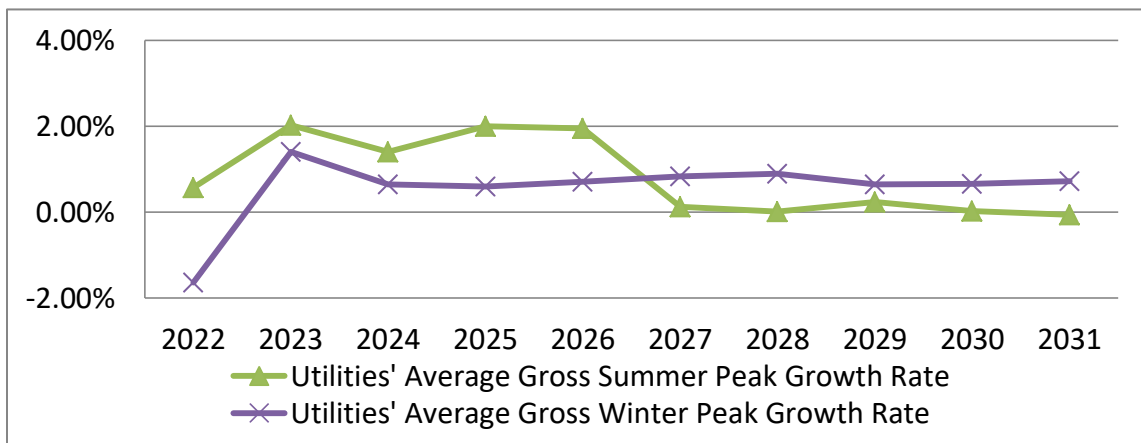

Figure 8 shows that the utilities' average gross winter peak growth rate rises substantially from 2022 to 2023 and is more stable throughout the 10-year planning period than the average gross summer peak growth rate which drops substantially from 2026 to 2027.

**Figure 8 Utilities' Projected Summer Peak Demand Growth Rates (Gross of DSM) Compared to Utilities' Projected Winter Peak Demand Growth Rates (Gross of DSM)**

<sup>30</sup> The utilities' average winter peak demand growth rates were calculated using the utilities' data responses to the Commission's 2022 data request for the Ten-Year Plan. *See* Appendix Table 3(a)(iii).

<sup>31</sup> *PJM Load Forecast Report*, PJM, (Jan. 2022) at 37-40, Table B-2, <https://www.pjm.com/-/media/library/reports-notice/load-forecast/2022-load-report.ashx>.

As shown in Table 5 and Table 6 below, the 10-year forecasted Maryland growth rates of summer and winter peak demand (gross of DSM) are 0.85 percent and 0.79 percent, respectively.<sup>32</sup> In 2031, at the end of this planning timeframe, these growth rates translate into an expected summer peak demand load (gross of DSM) for the Maryland service territory of 16,266 MW and an expected winter peak demand load (gross of DSM) for Maryland of 13,195 MW.<sup>33</sup>

## D. Impact of Demand Side Management

DSM programs result in lower growth of both energy sales and peak demand. To evaluate the impact of DSM programs, this section reflects the Maryland utilities’ energy sales forecasts *after* the benefits of DSM programs are included (“net of DSM”). For purposes of this section, only the five utilities participating in EmPOWER Maryland are evaluated: BGE, DPL, PE, Pepco, and SMECO (“the participating utilities”).<sup>40</sup>

<sup>32</sup> See Appendix Table 3(a).

<sup>33</sup> See Appendix Tables 3(a)(i) and 3(a)(iii).

<sup>34</sup> *Id.*

<sup>35</sup> Thurmont and Williamsport were not included in this table because the companies do not have any changes in their peak demand forecasts over the 10-year period.

<sup>36</sup> Numbers are rounded to nearest whole number.

<sup>37</sup> See Appendix Tables 3(a)(i) and 3(a)(iii).

<sup>38</sup> Thurmont and Williamsport were not included in this table because the companies do not have any changes in their peak demand forecasts over the 10-year period.

<sup>39</sup> Numbers are rounded to nearest whole number.

<sup>40</sup> See The EmPOWER Maryland Report to the General Assembly for more information on the energy efficiency and demand response programs associated with EmPOWER Maryland, *available at*:

According to the participating utilities’ Ten-Year Plan forecasts, the DSM programs will save a total of 32,586 GWh over the planning period. These savings will be achieved by reducing the annual rate of growth in energy sales and peak demand.

The tables below compare the growth in DSM savings across the participating utilities from 2022 to 2025. The forecasted savings post-2023, however, fluctuate in method and amount across the participating utilities given that Commission-approved plans for utility-implemented EE&C programs pertain only to the 2021-2023 program cycle.<sup>41</sup> Table 7 shows the growth in demand savings from DSM programs due to EE&C portfolios, while Table 8 shows the growth in total demand savings attributable to DSM programs as a whole. The variation in the magnitude of impact of the EE&C and DSM programs by utility are due to the different sizes of the programs offered and the way in which the data was forecasted by the participating utilities. Also, the Commission notes that demand savings projections later in the 2022-2031 planning horizon may be affected by future iterations of EmPOWER Maryland program cycle proposals, as well as pending changes to the capacity market as a result of PJM’s Capacity Performance Construct.

**Table 7: Average Annual Increase in Demand Savings due to DSM Programs from 2022 to 2025 for EE&C Programs<sup>42</sup>**

<b>Description</b>	<b>BGE</b>	<b>DPL</b>	<b>PE</b>	<b>Pepco</b>	<b>SMECO</b>
Average Annual MW Savings Increase due to DSM Programs	-10.3%	7.3%	10.7%	19.6%	1.5%

**Table 8: Average Annual Increase in Demand Savings due to DSM Programs from 2022 to 2025 for All DSM Programs<sup>43</sup>**

<b>Description</b>	<b>BGE</b>	<b>DPL</b>	<b>PE</b>	<b>Pepco</b>	<b>SMECO</b>
Average Annual MW Savings Increase due to DSM Programs	-5.7%	6.1%	9.9%	18.2%	1.5%

---

<https://www.psc.state.md.us/wp-content/uploads/2022-EmPOWER-Maryland-Energy-Efficiency-Act-Standard-Report.pdf>

<sup>41</sup> Because the Commission has only approved plans pertaining to the 2021-2023 program cycle at this date, BGE did not include any EE&C savings projections after 2023, with the exception of its Residential Demand Response Program and CVR, and Dynamic Pricing. The other participating utilities assume a level of savings post-2023.

<sup>42</sup> Responses to the Commission’s Ten-Year Plan data requests.

<sup>43</sup> *Id.*

## **IV. Transmission, Supply, and Generation**

In order to ensure a safe, reliable, and economic supply of electricity in Maryland, an appropriate balance of generation, DSM, imports, and transmission must be achieved. While importation and DSM offer ancillary benefits to managing the power supply, it is critical that local generation is established and maintained to mitigate the risk to Maryland’s long-term reliability.

For purposes of the Ten-Year Plan, the congestion costs and the role of transmission infrastructure in planning processes are discussed in Section IV.A; Section IV.B focuses on the state-specific impact of Maryland’s status as a net importer of electricity. Information related to the Commission’s concerns about the capacity, composition, and advanced age of Maryland’s current generation profile is discussed in Section IV.C.

Maryland depends on PJM to operate the regional transmission system and to schedule the flows of power around the state (including importing power from other areas into Maryland). All load serving entities in PJM are required to ensure that they have sufficient capacity contracts to provide reliable electric service during periods of peak demand. As of 2020, Maryland’s net summer generating capacity was 13,809 MW.<sup>44</sup> Maryland’s peak demand forecast for 2022, net of utility demand-side management and energy conservation measures, is approximately 12,863 MW.<sup>45</sup> Maryland had the capability to meet over 106.5 percent of its summer peak demand with in-state generation in 2020.<sup>46</sup> Notwithstanding the ability to meet peak capacity, Maryland still imports a significant portion of its electricity needs as discussed in more detail in Part B of this section.

### **A. Regional Transmission <sup>47</sup>**

PJM in its 2021 Regional Transmission Expansion Plan (“RTEP”) authorized about \$920 million in system transmission improvement projects. The development of the RTEP takes into account the total effects of system trends, which are often driven by federal and state policy decisions. The planning process applies the North American Electric Reliability Corporation (“NERC”) Planning Standard through the application of a wide range of reliability analyses (including load and generation deliverability tests) over a 15-year planning horizon.<sup>48</sup>

---

<sup>44</sup> The U.S. Energy Information Administration (“EIA”), State Electricity Profile: Maryland; <http://www.eia.gov/electricity/state/Maryland/>. The EIA’s most recent data available is from 2020. The next anticipated release date is listed as December 2022.

<sup>45</sup> See Appendix Table 3(a)(ii).

<sup>46</sup> The peak demand net of DSM programs for the summer of 2020 was 12,969 according to the 2020-2029 Ten-Year Plan.  $14,809/12,969 = 106.5\%$ .

<sup>47</sup> See Appendix Table 4 for a full list of transmission enhancements proposed by Maryland utilities.

<sup>48</sup> *2021 Regional Transmission Expansion Plan*. PJM, (March 7, 2022) at 4, <https://www.pjm.com/-/media/library/reports-notices/2021-rtep/2021-rtep-report.ashx>.

## 1. Regional Transmission Congestion

This section of the Ten-Year Report discusses congestion in PJM and the Maryland Control Zones. Congestion reflects the underlying characteristics of the power system, including the nature and capability of transmission facilities as well as the cost and geographical distribution of facilities. Congestion occurs when available, least-cost energy cannot be delivered to all load because of inadequate transmission facilities, thereby causing the price of energy in the constrained area to be higher than in an unconstrained area. PJM’s Locational Marginal Pricing (“LMP”) system is designed to reflect the value of energy at a specific location and time of delivery, thus measuring the impact of congestion throughout the PJM system. Total congestion costs for the PJM RTO increased by 88.2 percent (\$466.6 million) between 2020 and 2021.<sup>49</sup>

## 2. Regional Transmission Upgrades

The Commission recognizes the need to maintain and improve the transmission system within Maryland in order to ensure safe, reliable, and economic electric service to the state’s ratepayers. As with increases in local generating capacity and the reduction of system load, transmission expansions and improvements can reduce congestion and LMP differences among zones; such improvements may also support reliability requirements and mitigate economic concerns. PJM’s 2020 RTEP authorized seven transmission upgrades for Maryland for approximately \$48.9 million.<sup>50</sup>

Appendix 4 lists all transmission enhancements identified by the Maryland utilities in response to data requests for the Ten-Year Plan. Together, the 10 identified transmission enhancements in Appendix Table 4 account for 33.9 miles of upgrades.

## B. Electricity Imports

Maryland continues to be a net importer of electricity, similar to many other states in PJM.<sup>51</sup> As of 2020, 42 percent of the electricity consumed in the state is imported from other states and internationally.<sup>52</sup> Nine of the 13 PJM states plus the District of

---

<sup>49</sup> Monitoring Analytics, *State of the Market Report for PJM - 2021*, PJM, (March 10, 2021) at 564, [https://www.monitoringanalytics.com/reports/PJM\\_State\\_of\\_the\\_Market/2021/2021-som-pjm-sec11.pdf](https://www.monitoringanalytics.com/reports/PJM_State_of_the_Market/2021/2021-som-pjm-sec11.pdf).

<sup>50</sup> 2021 Maryland and District of Columbia State Infrastructure Report, PJM, at 17-20, (May 2022), <https://www.pjm.com/-/media/library/reports-notice/state-specific-reports/2021/2021-maryland-dc-state-infrastructure-report.ashx?la=en>.

<sup>51</sup> PJM operates, but does not own, the transmission systems in: (1) Maryland; (2) all or part of 12 other states; and (3) the District of Columbia. With FERC approval, PJM undertakes the task of coordinating the movement of wholesale electricity and provides access to the transmission grid for utility and non-utility users alike. Within the PJM region, power plants are dispatched to meet load requirements without regard to operating company boundaries. Generally, adjacent utility service territories import or export wholesale electricity as needed to reduce the total amount of capacity required by balancing retail load and generation capacity.

<sup>52</sup> *State Electricity Profiles 2020*, U.S. Energy Information Administration, (November 4, 2021) at Table 10, <https://www.eia.gov/electricity/state/maryland/xls/md.xlsx>.

Columbia are net importers of electricity. In a nationwide comparison, Maryland is the fifth largest electricity importer based on percentage of electricity sales, importing 40 percent of its electricity in 2019.<sup>53</sup> Only the District of Columbia, Massachusetts, Vermont and Delaware exceed Maryland in the percentage of electricity sales that are imported. In contrast, as of 2019, the states within the PJM region that exported more electricity in aggregate than consumed within each state are: Illinois, Pennsylvania, Michigan, and West Virginia.<sup>54</sup>

Maryland continues to be a net importer as in-state generation has declined in recent years. In 2008, Maryland resources generated over 50 million MWh in electricity. By 2020, however, in-state resources generated slightly over 36 million MWh.<sup>55</sup> The EmPOWER Maryland program, together with other energy efficiency efforts across the state, contributes to a decrease in the peak demand, which reduces the need to increase capacity and generation capabilities both in Maryland and throughout the PJM region. According to EIA, Maryland is ranked 43<sup>rd</sup> in the country for per capita energy consumption.<sup>56</sup>

### C. Maryland Capacity and Generation Profiles

The capacity and generation profiles of in-state resources must be comprehensively analyzed for both short-term and long-term reliability planning purposes, due to the uncertain future of coal-fired generation.<sup>57</sup> In Case No. 9214, the Commission observed the state’s reliability risk is further heightened because neighboring states that export electricity into Maryland also have at-risk coal-fired generation.<sup>58</sup>

#### 1. Conventional Capacity and Generation Profiles, 2020

Coal-fired power plants represent 23 percent of the electric generating capacity in Maryland, of which 75 percent of such capacity is aged 31 years or older. Within this category, 27 percent is considered “at-risk,” as defined by PJM.<sup>59</sup> Table 9 and Table 10

---

<sup>53</sup> *State Electricity Profiles 2020*, U.S. Energy Information Administration, (November 4, 2021) at Table 10, (for each state, <https://www.eia.gov/electricity/state/index.php>).

<sup>54</sup> *Id.*

<sup>55</sup> *State Electricity Profiles 2020*, U.S. Energy Information Administration, (November 4, 2021) at Table 5, [https://www.eia.gov/electricity/state/maryland/state\\_tables.php](https://www.eia.gov/electricity/state/maryland/state_tables.php).

<sup>56</sup> *Maryland State Energy Profile*, U.S. Energy Information Administration, (November 18, 2021), <https://www.eia.gov/state/print.php?sid=MD>.

<sup>57</sup> The uncertainty stems from the economic pressure on coal as a result of decreasing natural gas prices, as well as from regulations promulgated by the U.S. Environmental Protection Agency.

<sup>58</sup> Case No. 9214, *In the Matter of Whether New Generating Facilities Are Needed to Meet Long-Term Demand for Standard Offer Service*. Order No. 84815 (April 12, 2012) at 19.

<sup>59</sup> PJM categorizes coal generation more than 40 years old and less than 400 MW as at “high-risk” of retirement. Case No. 9214, *In the Matter of Whether New Generating Facilities Are Needed to Meet Long-Term Demand for Standard Offer Service*, PJM Comments, (January 13, 2012) at 11-12.

below depict the electric generating capacity in Maryland, as well as the age of plants by fuel type.<sup>60</sup>

**Table 9: Maryland Summer Peak Capacity Profile, 2020<sup>61</sup>**

Primary Fuel Type	Capacity	
	Summer (MW)	Percent of Total
Coal	2,963.0	22.8%
Oil	1,314.3	10.1%
Natural Gas	5,694.4	43.8%
Nuclear	1,707.8	13.1%
Hydroelectric	590.0	4.5%
Other and Renewables	729.4	5.6%
<b>Total</b>	<b>12,998.9</b>	<b>100.0%</b>

**Table 10: Age of Maryland Generation by Fuel Type, 2020<sup>62</sup>**

Primary Fuel Type	Age of Plants, By Percent			
	1-10 Years	11-20 Years	21-30 Years	31+ Years
Coal	0%	0%	17%	83%
Oil	6%	6%	10%	79%
Natural Gas	37%	28%	15%	20%
Nuclear	0%	0%	0%	100%
Hydroelectric	0%	0%	0%	100%
Other and Renewables	72%	23%	1%	4%

Maryland’s summer peak capacity profile decreased by 812 MW in 2021 compared to 2020, as illustrated in Figure 9. The capacity reduced in 2021 can be largely attributed to decreases in coal.

<sup>60</sup> See Appendix Table 5 for a list of Maryland generation capacity in 2021.

<sup>61</sup> Report EIA-860: “3\_1\_Generator\_Y2021\_Early\_Release” Excel, U.S. Energy Information Administration, (June 2, 2022), <https://www.eia.gov/electricity/data/eia860/>.

<sup>62</sup> *Id.*

**Figure 9 Maryland Summer Capacity Profile (MW), 2008 – 2021<sup>63</sup>**

Maryland’s generating profile differs from its capacity profile. Coal and nuclear facilities typically generate an overwhelming majority of all electricity produced in Maryland, even though these resources represent a little under half of in-state capacity.<sup>64</sup> Conversely, oil and certain natural gas facilities, which operate as mid-merit or peaking units that come on-line when needed, generate 39 percent of the electric energy produced in Maryland while representing 54 percent of in-state capacity. Table 11 summarizes Maryland’s 2020 in-state generation profile according to fuel source.

**Table 11: Maryland Generation Profile, 2020<sup>65</sup>**

Primary Fuel Source	Generation	
	Annual (MWh)	Percent of Total
Coal	3,359,560	9.3%
Oil	70,379	0.2%
Gas	14,091,778	39.1%
Nuclear	15,080,557	41.9%
Hydroelectric	1,696,803	4.7%
Other & Renewables	1,730,127	4.8%
<b>Total</b>	<b>36,029,204</b>	<b>100.0%</b>

Unlike the stability historically exhibited by Maryland’s summer capacity profile, the percentage of in-state generation derived from various fuel sources continues to evolve as illustrated in

<sup>63</sup> U.S. Energy Information Administration, Form EIA-923, “Power Plant Operations Report.”

<sup>64</sup> See *supra* Table 9. Coal facilities represented 22.8 percent of the in-state capacity in 2021, while nuclear facilities represented 13.1 percent of capacity. Therefore, coal and nuclear facilities combined for 36 percent of Maryland’s generating capacity profile in 2021.

<sup>65</sup> *State Electricity Profiles 2020*, U.S. Energy Information Administration, (November 2, 2021) at Table 5, [https://www.eia.gov/electricity/state/maryland/state\\_tables.php](https://www.eia.gov/electricity/state/maryland/state_tables.php).

Figure 10 below. Between 2010 and 2020, in-state coal generation decreased by 20,309 GWhs. The percentage of coal generation has dropped from 54 percent in 2010 to 9 percent in 2020. The decrease in in-state generation can be largely attributed to a drop in coal generation, which decreased by 41 percent in 2020 compared to 2021.

**Figure 10 Maryland Generation Profile, 2010 – 2020<sup>66</sup>**

The standard life expectancy for coal generation facilities is approximately 40 years, though extensions can often be granted for up to 60 years. This assessment places a significant percentage of total Maryland coal generation capacity at or near the end of its normal operational life, a fact made especially concerning considering that coal generation facilities provided 9.3 percent of the in-state generation in 2020. If operational extensions for Maryland coal generation units are not requested, additional in-state resources will be needed to avoid potential reliability concerns.

PJM lists three plants retired in 2021: two coal-powered plants and one methane-powered landfill totaling 672.5 MW in capacity.<sup>67</sup> There are three pending deactivation requests in the Pepco service territory with a combined capacity of 50 MWs; while PJM currently registers 5.8 GW of capacity resources requesting deactivation within the RTO.<sup>68</sup> PJM is completing reliability analyses and has so far identified no reliability impacts associated with these deactivation requests in Maryland.

<sup>66</sup> *Id.*

<sup>67</sup> Generation Deactivations, PJM, <https://www.pjm.com/planning/services-requests/gen-deactivations.aspx>.

<sup>68</sup> *Id.*

## 2. Proposed Conventional Generation Additions<sup>69</sup>

The construction of new generation, both conventional and renewable, is a way to address the in-state capacity and electricity import issues discussed in previous sections. As of the date of this report, there were 4,790 MWs of proposed new generation active in the PJM queue, with 57 percent consisting of solar projects.<sup>70</sup>

## 3. Renewable Generation and Proposed Additions<sup>71</sup>

The Commission recognizes the importance renewable generation plays in meeting Maryland’s energy needs while also addressing environmental concerns. Based on the PJM queue, Maryland’s renewable generation capacity is planned to increase by an estimated 2,759 MW over the next several years as shown in

Table 12 below. This does not, however, account for smaller renewable generators, notably residential solar; these smaller renewable generators are not required to obtain PJM interconnection status, but simply require interconnection with the local utility.

**Table 12: Proposed New Renewable Generation in Maryland**

Utility	Fuel Type	In-Service Date Range	Total Capacity (MW)
APS	Solar	2020-2024	645.6
	Hydro	2023	15.0
BGE	Solar	2022-2024	72.7
DPL	Solar	2017-2024	616.7
Pepco	Solar	2019-2020	1,377.0
PPL	Solar	2022	12.0
SMECO	Solar	2021-2023	19.6
<b>Total (MW):</b>			<b>2,758.6</b>

The amount of solar resources in Maryland will continue to increase due to a suite of state policy initiatives: the requirement that the Renewable Portfolio Standard (“RPS”) solar carve-out be interconnected to the distribution network serving Maryland; net

<sup>69</sup> See Appendix Table 6 for a complete list of new renewable generation proposed in Maryland.

<sup>70</sup> New Services Queue, PJM, (July, 2021), <https://www.pjm.com/planning/services-requests/interconnection-queues.aspx>.

<sup>71</sup> Maryland’s Renewable Portfolio Standard has helped incent new renewable generation capacity in Maryland via renewable energy credits (“RECs”) and the compliance payments submitted to the Strategic Energy Investment Fund. RECs are the environmental attributes of renewable generation, and are separate from the actual electricity generation from Maryland’s renewable resources. More details can be found at the *Renewable Energy Standard Report*; available at: [https://www.psc.state.md.us/wp-content/uploads/CY20-RPS-Annual-Report\\_Final.pdf](https://www.psc.state.md.us/wp-content/uploads/CY20-RPS-Annual-Report_Final.pdf).

metering incentives; tax incentives; the community solar pilot program; and grants administered by the Maryland Energy Administration.

On December 17, 2021, the Commission approved two offshore wind projects in compliance with the Clean Energy Jobs Act of 2019.<sup>72</sup> The two projects, along with earlier approved projects, are expected to generate over 7 million MWhs annually beginning in 2027. These projects are currently working with the Bureau of Ocean Energy Management (“BOEM”), the federal agency responsible for overseeing the development of energy projects located offshore in federal waters, for approval to begin construction. The increasing renewable generation penetration may have the potential to impact the grid, and the Commission will continue to monitor the successful integration of these renewables.

#### 4. Nuclear Generation

The Commission also recognizes the important role nuclear generation plays in meeting Maryland’s energy needs. Nuclear energy provides reliability and resiliency to the grid while assisting Maryland in reaching its Regional Greenhouse Gas Initiative (“RGGI”) commitments and its goals under the Greenhouse Gas Emissions Reduction Act as the largest carbon-emission free energy generation source in the state at 82 percent of Maryland’s emission-free electricity.<sup>73</sup> CEJA also required DNR to conduct an additional study on the relevancy and outlook for nuclear capacity on Maryland’s generating portfolio both currently and in the future.

#### 5. Storage

The Energy Storage Pilot Project Act was passed in 2019 and requires the Commission to establish an energy storage pilot program. The investor-owned electric companies were required to seek Commission approval for two storage pilot projects each in 2020, and the Commission approved eight energy storage pilot projects in April, 2021. There are also several storage projects in the PJM queue that are projected to begin operating in the near future as illustrated in Table 13 below.

### D. PJM's Reliability Pricing Model

As a means of ensuring reliability of the electric system in the RTO, PJM annually conducts a long-term planning process that compares the potential available generation capacity located within the RTO and the import capability of the RTO against the estimated demand of customers within the RTO. Consequently, the model projects

the amount of generation and transmission required to maintain the reliability of the electric grid within PJM. The amount of capacity procured in PJM’s Reliability Pricing Model (“RPM”) is roughly based upon a forecast of the peak load projected by PJM for a particular year, plus a reserve margin. The RPM works in conjunction with PJM’s RTEP to ensure reliability in the PJM region for future years. Locational constraints are also identified for a delivery year in the PJM Regional Transmission Expansion Planning Process (“RTEPP”) prior to each Base Residual Auction (“BRA”). Locational constraints are capacity import capability limitations that are caused by transmission facility limitations or voltage limitations. Resources in the unconstrained Locational Deliverability Areas (“LDA”) (and capacity imported into constrained LDAs) are paid the Unconstrained (lower) Resource Clearing Price.

Using this information, PJM evaluates offers from resources three years in advance to be available for a one year delivery period running from June through May (up to three years for new generation) through the BRA.<sup>74</sup> Once PJM completes its RTEPP and conducts the BRA, PJM is in a position to evaluate the reliability of its system. PJM must operate the transmission system to meet reliability criteria established by the Federal Energy Regulatory Commission (“FERC”) and administered by NERC.

The Mid-Atlantic Advisory Council (“MAAC”) LDA<sup>75</sup> has experienced significant volatility in Net Zonal Load<sup>76</sup> capacity prices as a result of the past 10 BRAs. The historical pattern suggests that future BRA results could vary significantly from year to year and must be closely monitored by PJM.

---

<sup>74</sup> PJM Manual 18: PJM Capacity Market, Section 1: Overview of the PJM Capacity Market Reliability Pricing Model, PJM Markets & Operations, (last revised July 27, 2022), <https://www.pjm.com/directory/manuals/m18/index.html#Sections/Section%201%20Overview%20of%20the%20PJM%20Capacity%20Market.html>.

<sup>75</sup> MAAC includes the South-West MAAC (“SWMAAC”) which is the zone serving central Maryland.

<sup>76</sup> The Zonal Net Load capacity price reflects the BRA resource clearing price and credits from any transmission capacity transfer rights.

## **V. Conclusion**

Electricity sector planning will continue to be affected by several different issues over the next 10 years, including projections regarding Maryland utility customers, energy sales, and in-state capacity and generation profiles. Other factors that will play a significant role in the planning process will be Maryland’s median income, the state’s population, and its housing stock. The Maryland utilities’ load forecasts indicate a modest amount of projected annual growth in the number of customers, energy sales and peak demand throughout the state during the 2022-2031 planning horizon. In response to these and other developments, the 2023-2032 Ten-Year Plan will enable continued review and assessment of the impacts that the above-mentioned issues will have on Maryland’s long-term electricity resource planning.

Internally, the Commission created a work group on distribution system planning under its grid modernization proceeding, Public Conference 44 (“PC44”) and Case 9665. The PC44 Distribution System Planning Work Group is led by an external facilitator and is reviewing the current planning processes in Maryland, related state policies, and existing utility programs that interface with distribution system planning. The Commission will review progress and recommendations from the work group at the end of the year.

Note: A&N, Choptank, and Somerset did not report applicable information for this table.

Note: The “Resale” class refers to “Sales for Resale,” which is energy supplied to other electric utilities, cooperatives, municipalities, and federal and state electric agencies for resale to end-use consumers. PE is the only utility with any resale customers; these wholesale customers are PJM, Monongahela Power Company, West Penn Power Company and Old Dominion Electric Cooperative.

## Appendix 1(b): 2021 Customer Numbers and Energy Sales

### Appendix Table 1(b)(i): Customer Class Breakdown as of December 31, 2021 (number of customers)

Utility	System Wide						Maryland					
	Residential	Commercial	Industrial	Other	Sales for Resale	Total	Residential	Commercial	Industrial	Other	Sales for Resale	Total
