I. INTRODUCTION

This document constitutes the annual report of the Public Service Commission of Maryland regarding the implementation of the Maryland Renewable Energy Portfolio Standard (RPS) Program, with data for calendar year 2023. This report is submitted pursuant to §7-712 of the Public Utilities Article (PUA), *Annotated Code of Maryland*, which requires the Commission to report to the General Assembly on the status of the implementation of the RPS Program on or before December 1 of each year.¹ The Maryland RPS Program is designed to support a stable and predictable market for energy generated from renewables, to reduce greenhouse gas emissions and eliminate carbon-fueled generation from the State's electric grid, and to lower the cost to consumers of electricity produced from these resources. Implementation of the RPS Program assists in overcoming market barriers seen as impediments to the development of the industry. Moreover, increasing reliance upon renewable energy technologies to satisfy electric power requirements can result in long-term emission reductions, increased fuel diversity, and economic benefits to the State.²

The calendar year 2023 electricity supplier compliance reports, as verified by the Commission, indicate that the State of Maryland RPS obligations were partly fulfilled through the submission of Tier 1 and Tier 2 Renewable Energy Credits (RECs).³ Remaining calendar year 2023 RPS obligations were satisfied by compliance fees, also known as Alternative Compliance Payments (ACPs). This year's ACPs were by far the largest in the history of the RPS, indicating a shift in how electricity suppliers comply with the RPS obligations within Maryland.

A. Objectives of the Program

The objective of PUA §7-701 *et seq.* (the RPS statute) is to recognize and to develop the benefits associated with a diverse portfolio of renewable energy resources to serve Maryland. The State's RPS Program does this by recognizing the environmental and consumer benefits associated with renewable energy. The RPS Program requires electricity suppliers to supply a prescribed minimum portion of their retail electricity sales with various renewable energy resources which have been classified within the RPS statute as Tier 1 and Tier 2 renewable resources. The program is implemented through the creation, sale, and transfer of RECs.

The development of renewable energy resources is further promoted by requiring electricity suppliers to provide an ACP for failing to acquire sufficient RECs to satisfy the RPS as set forth in PUA §7-703. Compliance fees are deposited into the Maryland Strategic Energy Investment Fund (SEIF) as dedicated funds to provide for loans and grants that spur the creation

¹ Electricity suppliers must file an RPS compliance report with the Commission for the prior calendar year by April 1st of the subsequent year. Consequently, this report, which is due to the General Assembly in December 2024, highlights data from electricity suppliers' 2023 compliance reports and other relevant 2023 data. In compliance with PUA §7-712, topics addressed in this report include the availability of Tier 1, Tier 1 Solar, and Tier 2 renewable energy sources, compliance fees collected to support in-State renewable projects, and other pertinent information.

² See PUA §7-702 which describes the legislative intent and legislative findings in support of the enactment of the Maryland Renewable Energy Portfolio Standard.

³ See Section I.B.2 for a description of eligible Tier 1 and Tier 2 resources and requirements.

of new Tier 1 renewable energy resources in the State including those that are owned by or directly benefit low- to moderate-income communities, or overburdened or underserved communities.⁴ Responsibility for developing renewable energy resources is vested with the Maryland Energy Administration (MEA).

B. Overview of the Maryland RPS Program

Under the RPS Program, Maryland electricity suppliers are required to demonstrate compliance on an annual basis with an escalating renewable energy portfolio standard. This requirement applies to both competitive retail suppliers and electric companies in the state, including those that provide Standard Offer Service.⁵ Electricity suppliers must file annual compliance reports with the Commission verifying that the renewable requirement for each entity has been satisfied.

A REC constitutes the renewable attributes associated with one megawatt-hour (MWh) of electricity generated using eligible renewable resources. As such, a REC is a uniquely-identified tradable commodity equal to one MWh of electricity generated or obtained from an eligible renewable energy resource. While RECs are often bundled and sold with the generated electricity, RECs can be traded separately. Generators and electricity suppliers may trade RECs using a Commission-approved system known as the Generation Attributes Tracking System (GATS). The GATS system is operated by PJM Environmental Information Services, Inc. (PJM-EIS) and is designed to track the ownership and trading of generation attributes.⁶ A REC previously had a three-year lifespan during which it may be transferred, sold, or redeemed, however, in 2024, this was increased to five years due to the passage of Senate Bill 783 in 2024.⁷ Each electricity supplier must document annually the retirement of RECs equal to the percentage specified by the RPS statute or pay an ACP commensurate with any shortfalls.

1. Registration of Renewable Energy Facilities

Facilities eligible for the Maryland RPS Program must be in PJM (the wholesale bulk power control area in which Maryland resides)⁸ or an adjacent control area,⁹ so long as the

⁴ See Article - State Government §9–20B–05(i).

⁵ Standard Offer Service (SOS) is electricity supply purchased from an electric company by the company's retail customers who cannot or choose not to transact with a competitive supplier operating in the retail market. See PUA §§7-501(n) and 7-510(c).

⁶ An attribute is "a characteristic of a generator, such as location, vintage, emissions output, fuel, state RPS Program eligibility, etc." PJM-EIS, *GATS Operating Rules* (May 2014) at 3.

⁷ Chapter 595 of the Laws of Maryland 2024.

⁸ The PJM wholesale market includes all or parts of Delaware, Illinois, Indiana, Kentucky, Maryland, Michigan, New Jersey, North Carolina, Ohio, Pennsylvania, Tennessee, Virginia, West Virginia, and the District of Columbia.

⁹ A control area is an "electric system or systems, bounded by interconnection metering and telemetry, capable of controlling generation to maintain its interchange schedule with other Control Areas and contributing to frequency regulation. For the purposes of this document, a Control Area is defined in broad terms to include transmission system operations, market, and load-serving functions within a single organization. A Control Area operator may be a system operator, a transmission grid operator, or a utility." PJM-EIS, *Generation Attribute Tracking System (GATS) Operating Rules* (April 2018) at 5. For example, the multi-state area controlled by the PJM Regional

electricity produced is delivered into the PJM region. However, facilities generating electricity from solar energy, geothermal, poultry litter-to-energy, waste-to-energy, or refuse-derived fuel are eligible only if the facility is connected to the electric distribution grid serving Maryland. Energy from a thermal biomass system must be used within Maryland to qualify for the RPS program.¹⁰ Finally, energy from raw or treated wastewater used as a heat source or sink for a heating or cooling system must be either connected with the electric distribution grid serving Maryland or used to process wastewater from Maryland residents in order to qualify.¹¹

Before recommending certification of a Renewable Energy Facility (REF), Commission Staff must determine whether the facility meets the standards set forth by the RPS statute and Commission regulations (COMAR 20.61). REF applicants who qualify under Maryland's RPS Program must complete the appropriate application for REF certification posted on the Commission's RPS website.¹² In addition to the geographic requirements, applicants must also meet the fuel source requirements associated with Tier 1 or Tier 2 (see Table 1 below). Verification of the fuel source is completed with the aid of Energy Information Administration Form 860 (EIA-860) to validate each facility's rated nameplate capacity, fuel source(s), location, and commercial operation in-service date.¹³ Facilities that co-fire a REC-eligible renewable fuel source with non-eligible fuel sources must also submit a formula or methodology to account for the proportion of total electricity generated by the eligible fuel sources, which then may be credited with RECs. In addition to obtaining Commission certification, all REFs must register with GATS to track and transact business related to RECs. The GATS account must be established with the certification number issued by the Commission upon approval of the REF application. With the passage of Senate Bill 783 in 2024, the Commission is required to: "On or before July 1, 2026, implement a revised system to review and ensure compliance with the Renewable Energy Portfolio Standard." In light of this requirement, the Commission is undergoing a process to update its existing REC application portal and procedure. Furthermore, the Commission is implementing new application requirements for REF's that qualify under the Small Solar Energy Generating System Incentive Program in accordance with updates established in Senate Bill 783. The Commission will provide updates to this implementation progress in future Renewable Energy Portfolio Standard Reports.

2. Maryland RPS Annual Percentage Requirements

To comply with the Maryland RPS Program, electricity suppliers must acquire RECs derived from Maryland-certified Tier 1 and Tier 2 renewable sources, as defined in PUA §7-701. Eligible fuel sources for Tier 1 RECs and Tier 2 RECs are listed in Table 1. Solar, geothermal,

Transmission Operator is one control area, as is the adjacent Midwest Independent System Operator (MISO) multi-state area, and the adjacent New York ISO.

¹⁰ There are currently no thermal biomass facilities in Maryland.

¹¹ PUA §7-701(s) as a result of House Bill 561 passed in 2021.

¹² REF applications are maintained by the Commission and are accessible online, available at: <https://www.psc.state.md.us/electricity/description-documents-maryland-renewable-energy-portfolio-standard-program/>.

¹³ Submitting Form EIA-860 is a requirement under Section 13(b) of the Federal Energy Administration Act of 1974 (Public Law 93-275) for generating plants, regulated and unregulated, which have a nameplate rating of 1 MW or more, are operating or plan to operate within 5 years, and are connected to the transmission grid.

and offshore wind have their own standards within Tier 1, and these “carve-outs” are sub-sets of the Tier 1 standard.

Table 1 Eligible Tier 1 and Tier 2 Sources

Tier 1 Renewable Sources	Tier 2 Renewable Sources
• Solar, including energy from photovoltaic technologies and solar water heating systems • Wind • Qualifying Biomass • Methane from a landfill or wastewater treatment plant • Geothermal • Ocean • Fuel Cell that produces electricity from a Tier 1 source • Hydroelectric power plant less than 30 MW capacity • Poultry litter-to-energy • Waste-to-energy • Refuse-derived fuel • Thermal energy from a thermal biomass system • Raw or treated wastewater used as a heat source or sink for a heating or cooling system	• Hydroelectric power other than pump storage generation <i>(Note: Tier 1 RECs may be used to satisfy Tier 2 obligations)</i>

As shown in Table 2 below, there is a different percentage schedule corresponding to each tier and carve-out requirement comprising the Maryland RPS Program.

- The Tier 1 requirements gradually increase until peaking in 2030, after which they are maintained at those levels.
- The Tier 1 Solar carve-out requirement increases from 6 percent in 2023 to 14.5 percent by 2030.¹⁴ This ramp-up period for the solar carve-out corresponds in part with the implementation of the community solar energy generating facilities which was established in 2015.¹⁵ This pilot was made into a permanent program in 2023.¹⁶ There is a potential that Solar Renewable Energy Credits (SRECs) generated by eligible community solar facilities could serve to help meet the increasing Tier 1 Solar carve-out in the coming years.

¹⁴ Chapter 757 of the Laws of Maryland 2019.

¹⁵ Chapter 346 of the Laws of Maryland 2015.

¹⁶ Chapter 652 of the Laws of Maryland 2023.

- The Brighter Tomorrow Act from 2024¹⁷ requires the Commission to establish the Small Solar Energy Generating System Incentive Program under which eligible solar systems may generate certified SRECs that have a compliance value of 150% of noncertified SRECs. The Act also extends the duration of all RECs used to comply with Maryland's RPS to five years.
- Beginning in 2017, a constant Tier 1 Offshore Wind carve-out of up to 2.5 percent commenced as part of the Tier 1 portfolio.¹⁸ In Order No. 88192, the Commission established specific offshore wind carve-outs from 2021 through 2042 ranging from 0.60 percent to 2.03 percent. Senate Bill 516, enacted in May 2019, increased the RPS requirements to 50 percent by 2030, and established additional offshore wind carve-outs beginning in 2027.
- Beginning in 2023, a Tier 1 geothermal carve-out of up to 0.05 percent will commence as part of the Tier 1 portfolio rising to 1.0 percent in 2028.
- Maryland's Tier 2 requirement of 2.5 percent was re-established by Senate Bill 65 in 2021.

Table 2 Annual RPS Requirements by Tier¹⁹

Compliance Year	Tier 1 (Excluding Carve-outs)	Solar	Offshore Wind²⁰	Post 2022 Geothermal	Tier 2	Total
2023	25.85%	6.00%	N/A	0.05%	2.50%	34.40%
2024	26.91%	6.50%	0.14%	0.15%	2.50%	36.20%
2025	26.59%	7.00%	1.66%	0.25%	2.50%	38.00%
2026	26.89%	8.00%	2.61%	0.50%	2.50%	40.50%
2027	18.23%	9.50%	13.02%	0.75%	2.50%	44.00%
2028	17.98%	11.00%	13.02%	1.00%	2.50%	45.50%
2029	22.98%	12.50%	13.02%	1.00%	2.50%	52.00%
2030+	21.48%	14.50%	13.02%	1.00%	2.50%	52.50%

¹⁷ Chapter 595 of the Laws of Maryland 2024.

¹⁸ The Maryland Offshore Wind Energy Act of 2013 (2013 Md. Laws, Ch. 003) established an offshore wind carve-out within the Tier 1 requirement. Beginning in 2017, Tier 1 may include a Commission-determined amount of offshore wind RECs (ORECs) not to exceed 2.5 percent. The project must be generating RECs in order for the obligation to begin. In the absence of a Commission-determined OREC obligation, electricity suppliers must satisfy the carve-out using RECs derived from other Tier 1 renewable sources.

¹⁹ For an electric cooperative, the solar requirement is 2.5% in 2020 and later. For a municipal electric utility, in 2022 and later, the requirements are 20.4% for Tier 1, which includes 1.95% from solar, and the offshore wind requirement shown above. See PUA §7-703(e).

²⁰ This percentage includes only the Commission-approved offshore wind energy carve-out from Order No. 88192 and Order No. 90011.

At certain renewable procurement cost thresholds, an electricity supplier can request that the Commission consider a delay in scheduled Tier 1 and Tier 1 Solar RPS percentages.²¹ To date, no such request has been made by electricity suppliers operating in the Maryland marketplace.

3. Maryland RPS Alternative Compliance Payment Requirements

Electricity suppliers who do not meet their RPS obligation through the retirement of eligible RECs must submit an ACP for every unit of shortfall. Table 3 presents the ACP schedule separated by tiers for each compliance year of the RPS Program moving forward.

Table 3 ACP Schedule (\$/MWh)

Compliance Year	Tier 1 (Excluding Carve-outs)	Solar	Post 2022 Geothermal	Tier 2	IPL²² Tier 1
2023	\$30	\$60	\$100	\$15	\$2
2024	\$27.50	\$60	\$100	\$15	\$2
2025	\$25	\$55	\$100	\$15	\$2
2026	\$24.75	\$45	\$90	\$15	\$2
2027	\$24.50	\$35	\$80	\$15	\$2
2028	\$22.50	\$32.50	\$65	\$15	\$2
2029	\$22.50	\$25	\$65	\$15	\$2
2030+	\$22.35	\$22.50	\$65	\$15	\$2

II. ELECTRICITY SUPPLIER COMPLIANCE REPORTS

Calendar year 2023 marked the 18th compliance year for the Maryland RPS. The RPS compliance reports submitted to the Commission by electricity suppliers, along with information obtained from GATS, provide information regarding the retired RECs and the underlying REFs (e.g., type and location of generators) utilized by electricity suppliers to comply with Maryland RPS obligations.²³ RPS compliance reports were filed by 110 electricity suppliers, including: 75 competitive retail suppliers; 24 brokers or competitive electricity suppliers with zero retail electricity sales; and 11 electric companies, of which four are investor-owned utilities.

²¹ PUA §7-705(e).

²² Industrial Process Load (IPL) means the consumption of electricity by a manufacturing process at an establishment classified in the manufacturing sector under the North American Industry Classification System. Under PUA §7-705(b)(2) and COMAR 20.61.01.06.E(5), a supplier sale for IPL is required to meet the entire Tier 1 obligation for electricity sales, including solar. However, the ACP for an IPL Tier 1 non-solar shortfall and a Tier 1 Solar shortfall is the same. For IPL, there is no ACP for Tier 2 shortfalls.

²³ According to PUA §7-709, a REC can be diminished or extinguished before the expiration of three years by: the electricity supplier that received the credit; a nonaffiliated entity of the electricity supplier that purchased or otherwise received the transferred credit; or demonstrated noncompliance by the generating facility with the requirements of PUA §7-704(f). In the PJM region, the regional term of art is “retirement,” which describes the process of removing a REC from circulation by the REC owner, i.e., the owner “diminishes or extinguishes the REC.” PJM-EIS, *GATS Operating Rules* (January 2024) at 54-56.

According to the filed compliance reports, there were approximately 56.2 million MWh of total retail electricity sales in Maryland for 2023 (down from 58.9 million MWh in 2022); 55.1 million MWh of retail electricity sales were subject to RPS compliance and 1.1 million MWh were exempt.²⁴ Maryland electricity suppliers retired about 7.9 million RECs in 2023, far fewer than the 16.1 million RECs retired for compliance in 2022 and the 15.2 million RECs retired in 2021. In fact, 2023 had the fewest RECs retired since 2014, while the total cost of RECs retired in 2023 was \$243.8 million, down from \$355.4 million in 2022. ACP prices were in many instances less expensive than REC prices, and as a result suppliers chose to pay the ACP rather than retire RECs. To illustrate the fall in retired RECs, Figure 1 shows the number of RECs retired as a percentage of retail sales each year since 2008.

Figure 1 RECs Retired as a Percent of Retail Sales

Table 4 displays the average cost per REC retired in each tier since 2008. The overall rise in REC prices is likely attributable to the increasing RPS percentages in both Maryland and other PJM states. The rise in SREC prices may be attributable to an increase in demand for SRECs due to the effects of the Clean Energy Jobs Act.²⁵

²⁴ According to PUA §7-703(a)(2), exceptions for the RPS requirement may include: IPL which exceeds 300,000,000 kWh by a single customer in a year; regions where residential customer rates are subject to a freeze or cap (see PUA §7-505); or electric cooperatives under a purchase agreement that existed prior to October 1, 2004, until the expiration of the agreement. COMAR 20.61.01.06(D) exempts any sale of electricity that is marketed or otherwise represented to customers as renewable or having characteristics of a Tier 1 renewable source or Tier 2 renewable source.

²⁵ Chapter 673 of the Laws of Maryland 2021.

Table 4 Average Cost of RECs per Tier (2008 – 2023)

Year	Tier 1	Geothermal*	Solar	Tier 2
2008	\$0.94	N/A	\$345.45	\$0.56
2009	\$0.96	N/A	\$345.28	\$0.43
2010	\$0.99	N/A	\$328.57	\$0.38
2011	\$2.02	N/A	\$278.26	\$0.45
2012	\$3.19	N/A	\$201.92	\$0.44
2013	\$6.70	N/A	\$159.71	\$1.81
2014	\$11.64	N/A	\$144.06	\$1.81
2015	\$13.87	N/A	\$130.39	\$1.71
2016	\$12.22	N/A	\$110.63	\$0.96
2017	\$7.14	N/A	\$38.18	\$0.48
2018	\$6.54	N/A	\$31.91	\$0.66
2019	\$7.77	N/A	\$47.26	\$1.05
2020	\$8.24	N/A	\$66.10	\$1.06
2021	\$14.36	N/A	\$72.59	\$6.45
2022	\$17.80	N/A	\$57.80	\$7.42
2023	\$24.61	\$94.47	\$56.67	\$10.50

* Note geothermal is only the post-2022 carve-out and does not include the geothermal included in the Tier 1 column.

As demonstrated by Table 5, the aggregated cost of compliance with the Maryland RPS Program in 2023 displays a significant increase from 2022 (from \$438,832,999 in 2022 to \$564,208,520 in 2023). While costs had been moderately increasing with time, a spike in prices occurred in 2021. This was driven in part by an increase in the requirement for retired Solar RECs, resulting in large quantities of ACPs needing to be purchased. Much of the increase in 2023 was driven by the unprecedented ACPs, in part due to REC prices in the market being above the ACPs when many suppliers were looking to purchase RECs. REC prices may have been above the ACP due to a general shortage of Tier 1 RECs, and the fact that surrounding states such as Pennsylvania and New Jersey have higher Tier 1 ACPs than does Maryland. Prior to 2021, reliance on ACPs had been limited. As shown in Table 5, the total cost of ACPs increased substantially from \$86,584,883 in 2022 to \$320,363,538 in 2023.

Table 5 Total Cost of RECs per Year (2018 – 2023)

	Tier	2018	2019	2020	2021	2022	2023
Total REC Costs	Tier 1	\$56,406,247	\$79,320,505	\$99,836,127	\$187,346,301	\$246,480,883	\$124,932,208

Table 6 Results of the 2023 RPS Compliance Reports

RPS Compliance Year		Tier 1	Geothermal	Solar	Tier 2	Total
2023	RPS Obligation	13,818,282	17,229	3,017,380	905,725	17,758,616
	Retired RECs	5,075,872	1,032	1,933,280	878,304	7,888,488
	ACP Required	\$262,364,678	\$1,619,700	\$55,966,945	\$412,215	\$320,363,538

Note: Some electricity suppliers retired more RECs than required.

RECs are valid to demonstrate RPS compliance for the calendar year in which they were generated and in the following four calendar years.²⁶ Figure 2 aggregates the Maryland RPS tiers on the basis of generation year. For the 2023 compliance year, 69.0 percent of RECs retired were generated in 2023; 21.4 percent were generated in 2022; and the remaining 9.3 percent were generated in 2021. This data conveys that RECs are in high demand as they are most often retired in the year of their generation.

²⁶ COMAR 20.61.03.01C (unless the REC is diminished or extinguished before expiration). A REC previously had a three-year lifespan during which it may be transferred, sold, or redeemed, however, in 2024, this was increased to five years due to the passage of Senate Bill 783 in 2024 which leads to the REC being valid to demonstrate RPS compliance for the calendar year generated and in the following four calendar years, as opposed to the previous two calendar years.

Figure 2 RECs Retired in 2023 by Generation Year

Figure 3 illustrates the fuel sources used to satisfy Tier 1 RPS requirements for the 2023 RPS compliance year. Of the Tier 1 RECs retired for 2023, the resources from which the RECs were sourced consisted primarily of solar, wind, black liquor, and municipal solid waste. Although not pictured, Tier 2 RPS requirements for the 2023 RPS compliance year were satisfied exclusively by RECs derived from hydroelectric power.

Figure 3 2023 Tier 1 Retired RECs by Fuel Source²⁷

Abbreviations: BLQ, Black Liquor; LFG, Landfill Gas; GEO, Geothermal; MSW, Municipal Solid Waste; OBG, Other Biomass Gas; OBS, Biomass Solids; SUN, PV solar; WAT, Hydroelectric; WDS, WH, Waste Heat; Wood and Waste Solids; WND, Wind.

Figure 4 presents the geographical location and the total generating capacity (18,147 MW) for all Maryland RPS-certified facilities regardless of Tier. RPS requirements also exist in the surrounding states which generally support out-of-state and regional market participation. Illinois is the largest single source with over 98 percent of its registered capacity being wind generation.

²⁷ WAT includes Tier 1 only. Solar thermal and geothermal contributed too few RECs to be seen on the chart.

Figure 4 Total Rated Capacity by State (MW)²⁸

For the 2023 compliance year,.

Figure 5 displays aggregated REC data to convey general relationships among the states that contributed RECs. For the first time, Maryland supplied the largest number of RECs purchased by retail electric suppliers (34.6 percent), followed by Virginia (20.1 percent), and North Carolina (14.4 percent). The remaining 13 states contributed a total of 30.9 percent of all RECs retired in 2023. The majority of RECs from in-State generators were sourced from Tier 1 non-solar (28.0 percent) and solar photovoltaic (70.1 percent).

²⁸ PJM-EIS, Generation Attribute Tracking System, Database query, (October 1, 2023). The information in this figure does not include Commission-authorized REFs that have not established a REC account with PJM GATS.

Figure 5 Number of RECs Retired by Facility Location (2023)

Table 7 and Table 8 provide the quantitative data in support of the previous figure.

Table 7 provides the reported levels of RECs retired by Maryland electricity suppliers in 2023 on a tier and aggregate basis whereas Table 8 provides the information on a percentage basis.

Figure 6 illustrates the growth in RECs retired in total and by fuel type from the introduction of the solar carveout of the RPS requirement in 2008. For the fourth year in a row, wind was the largest contributor of total number of RECs. Total wind RECs retired for compliance have tripled since 2016. In 2020, solar REC retirements grew to be the second largest contributor of RECs, but solar was replaced by hydroelectric in 2023, due to the reintroduction of the Tier 2 requirement. Note that the contributions from qualifying biomass sourced from agricultural crops, geothermal, other biomass liquid and gas, and solar thermal are too small to be seen on this chart.

Figure 6 RECs Retired by Fuel Type (2008 – 2023)²⁹

Abbreviations: BLQ, Black Liquor; LFG, Landfill Gas; MSW, Municipal Solid Waste; SUN, Solar Photovoltaic; WAT, Hydroelectric; WDS, Wood and Waste Solids; WND, Wind.

In 2023, all the RECs retired from geothermal, solar and biomass gas sources originated in Maryland, while all waste heat came from the District of Columbia. The seven remaining fuels used to comply with Maryland’s 2023 RPS requirements corresponded to RECs generated in multiple other states, and Figure 7 shows the percentage contribution from each state for each of these seven fuels. Facilities located in Maryland provided 52.5 percent of municipal solid waste RECs retired for compliance in 2023. Maryland resources provided only 1.3 percent of wind RECs, 2.2 percent of hydroelectric RECs, 4.0 percent of landfill gas RECs, and 1.6 percent of wood and waste solids RECs. Maryland produced no RECs from black liquor or biomass gas.

²⁹ Senate Bill 65 of 2021 (Chapter 673) removed black liquor as an eligible resource. However, this law stated that a presently existing obligation or contract right may not be impaired in any way by this Act; so black liquor RECs will remain eligible until certain still existing contracts expire.

Figure 7 Percentage of RECs Generated in Each State, by Fuel (2023)³⁰

³⁰ Additional information pertaining to the source of renewable energy used to meet Maryland's 2023 RPS compliance requirements is presented in Appendices B and C. Appendix B provides a breakdown of the *number of RECs* used by electricity suppliers according to tier, fuel type, and facility location, while Appendix C presents the *number of facilities* by tier, fuel type, and facility location that provided RECs for compliance.

III. MARYLAND RENEWABLE ENERGY FACILITIES

Implementation of the Maryland RPS Program can provide an incentive for renewable generators to locate in Maryland and generate electricity. The renewable requirement establishes a market for renewable energy, and, to the extent Maryland's geography and natural resources can be utilized to generate renewable electricity, developers may locate projects within the state. This section of the report provides information about the REFs located in Maryland in 2023.³¹ Renewable energy generated in Maryland can be used both in Maryland and in other states for

³¹ Specific information pertaining to the State's REFs as described herein was made available by PJM-EIS in the GATS State Agency Report.

RPS compliance purposes, and also can be sold in support of competitive retail electricity supplier product offerings (*i.e.*, green power products).

As shown in Table 9, in 2023, eligible sources located within Maryland generated approximately 1.3 million Tier 1 non-solar RECs, 2.1 million Tier 1 SRECs, and 1.8 million Tier 2 RECs. Additional analyses pertaining to the Maryland-based renewable generators is presented in Appendices C through E. Appendix C shows the disposition of RECs generated in Maryland in 2023. Appendix D provides the number of renewable energy facilities by county that are both located in Maryland and registered with GATS to participate in any one of the PJM states' RPS programs. Appendix E provides the total capacity of these facilities, broken out by county and tier.

Table 9 2023 Maryland-Generated RECs by Fuel Source

Fuel Type		RECs (Quantity)	RECs (Percent)
Tier 1	Geothermal	58,387	1.1%
	Landfill Gas	63,174	1.2%
	Municipal Solid Waste	624,627	12.0%
	Biomass Solids	19,251	0.4%
	Small Hydro	14,168	0.3%
	Wood Waste	5,186	0.1%
	Wind	481,541	9.3%
Solar	Solar PV	2,087,528	40.3%
	Solar Thermal	2,532	0.0%
Tier 2	Large Hydro	1,829,381	35.3%
Total		5,185,775	100.0%

Table 10 presents additional detail regarding the disposition of Maryland-generated RECs in calendar year 2023. Approximately 35 percent of the RECs generated by renewable facilities located within Maryland during 2023 are available for potential future sale in Maryland or in other states in subsequent compliance years. Almost 47 percent of all RECs generated in Maryland were retired in 2023 to meet the RPS requirements in Maryland and various other PJM states. Labeled as “Other” in Table 10, 19 percent of RECs were used for other purposes which may include pending transfers between parties.

Table 10 Disposition of 2023 Maryland-Generated RECs

REC Tier	Available	RPS Compliance	Other	Total
Tier 1	620,031	645,850	453	1,266,334
Solar	325,062	1,764,767	231	2,090,060

Total	1,794,812	2,410,617	980,346	5,185,775
(%)	34.6%	46.5%	18.9%	100.0%

Source: PJM-EIS

Table 11 presents, on a state-by-state basis, the distribution of the RECs both generated in-state and retired for RPS compliance purposes. In 2023, Maryland-generated RECs were retired for compliance purposes in five jurisdictions: the District of Columbia, Delaware, Maryland, New Jersey, and Pennsylvania.

Table 11 2023 Maryland-Generated RECs Retired for RPS Compliance by State

IV. GEOTHERMAL CARVE-OUT

In 2021, House Bill 1007³² was signed into law which created a carve-out within Tier 1 for geothermal RECs created by a system with an in-service date of on or after January 1, 2023. The legislation refers to these as “Post-2022 Geothermal Systems” and the carve-out includes a requirement that at least 25% of the required percentage of the RPS percentage derived from post-2022 geothermal systems be derived from low and moderate income (“LMI”) systems.

2023 was the first year the post-2022 geothermal carve-out was applicable, and percentage requirements were 0.0375% for non-LMI systems, and 0.0125% for LMI systems, for a total of 0.05%. This results in a REC obligation of 12,937 non LMI GRECs and 4,292 LMI GRECs. A large majority of suppliers met these obligations by paying ACPs, with only 1,032 non-LMI GRECs being retired, and no LMI GRECs. The 1,032 post-2022 GRECs were retired by just two suppliers. These shortfalls resulted in ACP payments of \$1,190,500 for non-LMI GREC obligations and \$429,200 for LMI GREC obligations.

More suppliers could have met the GREC obligations, as a number of post-2022 GRECs remain available, however even if all had been retired, it would only have met 47 percent of the non-LMI GREC obligation, and none of the LMI GREC obligation, as no LMI system applied for GREC certification in 2023. The lack of LMI systems may be in part because the systems approved for Post-2022 GRECs appear to be largely from upper-income families due to the costs of these systems. Data from the applications show that the average size of these homes is 4,068 square feet, and according to Redfin, the average home value was almost \$850,000. The average estimated annual value of GRECs created by these systems is \$4,700 with some residential systems generating over \$12,000 worth of GRECs annually.

V. SMALL SOLAR ENERGY GENERATING SYSTEM INCENTIVE PROGRAM

In 2024, Senate Bill 783³³ was signed into law which established a “Small Solar Energy Generating System Incentive Program” to be administered by the Maryland Public Service Commission. The established program provides that an eligible system can apply to the Commission to become a “Certified System” and receive “Certified” SRECs which shall have a compliance value of 150% for electricity suppliers to apply towards meeting the Renewable Energy Portfolio Standards. To be eligible for this program, a system must: (1) be located in Maryland, (2) be eligible for inclusion in meeting the RPS, (3) have a generating capacity of 5 Megawatts or less, (4) be placed in service between July 1, 2024 and January 1, 2028, and (5) be a specific type of system as further specified within the statute.³⁴ To begin receiving “Certified” SRECs, eligible systems must submit specific application material to the Commission as specified in the statute.³⁵ The Commission will begin accepting applications and determining eligibility of systems no later than January 1, 2025.

³² Chapter 164 of the Acts of 2021.

³³ Chapter 595 of the Laws of Maryland 2024.

³⁴ PUA §7-709.1(D)(5).

³⁵ PUA §7-709.1(E).

In light of the requirements to establish the Small Solar Energy Generating System Incentive Program, the Commission is undergoing a process to update its existing REC application portal and procedures. This new program will likely have an impact on Maryland's Renewable Portfolio Standard in the future and the Commission will continue to provide updates on this program in future Renewable Energy Portfolio Standard Reports.

VI. CONCLUSION

The electricity supplier compliance reports for 2023, verified by the Commission, indicate that approximately 44 percent of Maryland RPS obligations were met via the purchase and retirement of RECs with \$320.4 million in ACPs. Approximately 35 percent of RECs used for compliance in 2023 came from in-state resources, up from 19 percent in 2022, RECs derived from three fuel types—solar (27.5 percent), wind (19.9 percent), and black liquor (16.1 percent)—were the predominant sources of Tier 1 compliance in 2023. Throughout this next year, the Commission will continue to: review applications from facilities requesting certification as a Maryland REF, oversee the RPS Program, and verify that the electricity suppliers in Maryland procure enough electricity generated by renewable resources. As noted in this report, compliance with the Renewable Portfolio Standard by electricity suppliers that was achieved through the purchase of ACPs (rather than the retirement of RECs) was by far the largest in the history of the RPS. The Commission will continue to monitor this matter in future reports.

Appendix G Price of RECs by Fuel Source

Fuel Source	Price/REC
Black Liquor	\$26.53
Geothermal	\$15.83
Post-2022 Geothermal	\$94.47
Landfill Gas	\$17.26
Municipal Solid Waste	\$24.49
Other Biomass Gas	\$20.00
Other Biomass Solids	\$26.21
Solar Hot Water	\$57.64
PV Solar	\$56.66
Tier 1 Hydroelectric	\$24.49
Wood and Waste Solids	\$23.03
Waste Heat	\$22.81
Wind	\$25.34
Tier 2 Hydroelectric	\$10.50
